Deposition, 1984 McD. Robinson, 1984 *Computational Fluid Dynamics Simulations* Guozhao Ji, Jiujiang Zhu, 2020 Fluid flows are encountered in our daily life as well as in engineering industries Identifying the temporal and spatial distribution of fluid dynamic properties is essential in analyzing the processes related to flows These properties such as velocity turbulence temperature pressure and concentration play important roles in mass transfer heat transfer reaction rate and force analysis However obtaining the analytical solution of these fluid property distributions is technically difficult or impossible With the technique of finite difference methods or finite element methods attaining numerical solutions from the partial differential equations of mass momentum and energy have become achievable Therefore computational fluid dynamics CFD has emerged and been widely applied in various fields This book collects the recent studies that have applied the CFD technique in analyzing several representative processes covering mechanical engineering chemical engineering environmental engineering and thermal engineering Mathematical Modelling in Science and Technology Xavier J.R. Avula, Rudolf E. Kalman, Anthanasios I. Liapis, 2014-05-09 Mathematical Modelling in Science and Technology The Fourth International Conference covers the proceedings of the Fourth International Conference by the same title held at the Swiss Federal Institute of Technology Zurich Switzerland on August 15 17 1983 Mathematical modeling is a powerful tool to solve many complex problems presented by scientific and technological developments This book is organized into 20 parts encompassing 180 chapters The first parts present the basic principles methodology systems theory parameter estimation system identification and optimization of mathematical modeling The succeeding parts discuss the features of stochastic and numerical modeling and simulation languages Considerable parts deal with the application areas of mathematical modeling such as in chemical engineering solid and fluid mechanics water resources medicine economics transportation and industry The last parts tackle the application of mathematical modeling in student management and other academic cases This book will prove useful to researchers in various science and technology fields Novel Concepts in Catalysis and Chemical Reactors Andrzej Cybulski, Jacob A. Moulijn, Andrzej Stankiewicz, 2011-08-04 The chemical process industry faces a tremendous challenge of supplying a growing and ever more demanding global population with the products we need The average efficiency at which resources are converted into the final products is however still dramatically low The most obvious solution is to carry out chemical conversions at much higher yields and selectivity and this is where active and selective catalysts and efficient chemical reactors play a crucial role Written by an international team of highly experienced editors and authors from academia and industry this ready reference focuses on how to enhance the efficiency of catalysts and reactors It treats key topics such as molecular modeling zeolites MOFs catalysis at room temperature biocatalysis catalysis for sustainability structured reactors including membrane and microchannel reactors switching from batch to continuous reactors application of alternative energies and process intensification By including recent achievements and trends the book provides an up to date insight into the most important developments in the field of industrial catalysis and chemical reactor
