## **Modelling Economic Series:**

**Modelling Economic Series** Clive William John Granger, 1990 This is a volume of readings for graduate students especially those taking courses in applied econometrics who need to learn how to evaluate the validity of present theories and techniques The aim of the text is to aid readers in the difficult task of actually constructing models The essays vary in the degree of technical sophistication used but each paper intends to provide students with a sound knowledge of the practical difficulties of model specification evaluation and interpretation as well as advice on tackling these difficulties **Time**

**Series Models for Business and Economic Forecasting** Philip Hans Franses, 1998-10-15 The econometric analysis of economic and business time series is a major field of research and application The last few decades have witnessed an increasing interest in both theoretical and empirical developments in constructing time series models and in their important application in forecasting In *Time Series Models for Business and Economic Forecasting* Philip Franses examines recent developments in time series analysis The early parts of the book focus on the typical features of time series data in business and economics Part III is concerned with the discussion of some important concepts in time series analysis the discussion focuses on the techniques which can be readily applied in practice Parts IV VIII suggest different modeling methods and model structures Part IX extends the concepts in chapter three to multivariate time series Part X examines common aspects across time series *Macroeconomic Modelling, Economic Policy and Methodology* Mikael Randrup Byrialsen, Hamid

Raza, Finn Olesen, 2022-10-27 Demonstrating that there are superior alternatives to the modern macroeconomic mainstream and its DSGE dynamic stochastic general equilibrium models this book presents the cutting edge in macroeconomic modelling economic policy and methodology from the perspective of heterodox economic thinking The first part of the book explores methodological issues advocating for a stronger ethical consideration in macroeconomics and for the adoption of a strategy of pluralism to ensure that macroeconomic theory is capable of adapting to real world issues The second part highlights recent trends in empirical Stock Flow Consistent models by collecting a group of the most well developed empirical models of five different economies the Danish the Dutch the French the Italian and the Argentinian models In all five cases the models are used to discuss various policy aspects of the individual economies Finally the book explores issues of macroeconomic policy which are largely neglected by mainstream economists including financial in stability and macro imbalances The book emphasizes the need for investigating sectoral balances which are crucial elements for investigating imbalances from the heterodox perspective This book will be of significant interest to students and scholars of

macroeconomics economic modelling economic methodology and heterodox economics more broadly **The Econometrics of Macroeconomic Modelling** Gunnar Bårdsen, Øyvind Eitrheim, Eilev Jansen, Ragnar Nymoen, 2005-04-14

Macroeconometric models in many ways the flagships of the economist s profession in the 1960s came under increasing attack from both theoretical economist and practitioners in the late 1970s Critics referred to their lack of microeconomic

theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies

*Modelling Trends and Cycles in Economic Time Series* Terence C. Mills, 2021-08-19 Modelling trends and cycles in economic time series has a long history with the use of linear trends and moving averages forming the basic tool kit of economists until the 1970s Several developments in econometrics then led to an overhaul of the techniques used to extract trends and cycles from time series In this second edition Terence Mills expands on the research in the area of trends and cycles over the last almost two decades to highlight to students and researchers the variety of techniques and the considerations that underpin their choice for modelling trends and cycles

Modelling Nonlinear Economic Time Series Timo Teräsvirta, Dag Tjøstheim, Clive W. J. Granger, 2010-12-16

This book contains an extensive up to date overview of nonlinear time series models and their application to modelling economic relationships It considers nonlinear models in stationary and nonstationary frameworks and both parametric and nonparametric models are discussed The book contains examples of nonlinear models in economic theory and presents the most common nonlinear time series models Importantly it shows the reader how to apply these models in practice For this purpose the building of various nonlinear models with its three stages of model building specification estimation and evaluation is discussed in detail and is illustrated by several examples involving both economic and non economic data Since estimation of nonlinear time series models is carried out using numerical algorithms the book contains a chapter on estimating parametric nonlinear models and another on estimating nonparametric ones Forecasting is a major reason for

building time series models linear or nonlinear The book contains a discussion on forecasting with nonlinear models both parametric and nonparametric and considers numerical techniques necessary for computing multi period forecasts from them The main focus of the book is on models of the conditional mean but models of the conditional variance mainly those of autoregressive conditional heteroskedasticity receive attention as well A separate chapter is devoted to state space models As a whole the book is an indispensable tool for researchers interested in nonlinear time series and is also suitable for teaching courses in econometrics and time series analysis

*Advanced Lectures in Quantitative Economics* Frederick van Der Ploeg, 2014-05-01 Advanced Lectures in Quantitative Economics summarizes some of the efforts of a second phase program for first rate candidates with a Master s degree in economics who wish to continue with a doctoral degree in quantitative economics This book is organized into three main topics macroeconomics microeconomics and econometrics This text specifically discusses the Neo Keynesian macroeconomics in an open economy international coordination of monetary policies under alternative exchange rate regimes and prospects for global trade imbalances The post war developments in labor economics introduction to overlapping generation models and measurement of expectations and direct tests of the REH are also elaborated This monograph likewise covers the dynamic econometric modeling of decisions under uncertainty and fundamental bordered matrix of linear estimation This publication is a good reference for students and specialists interested in quantitative economics

*Econometrics and the Philosophy of Economics* Bernt P. Stigum, 2015-12-29 As most econometricians will readily agree the data used in applied econometrics seldom provide accurate measurements for the pertinent theory s variables Here Bernt Stigum offers the first systematic and theoretically sound way of accounting for such inaccuracies He and a distinguished group of contributors bridge econometrics and the philosophy of economics two topics that seem worlds apart They ask How is a science of economics possible The answer is elusive Economic theory seems to be about abstract ideas or it might be said about toys in a toy community How can a researcher with such tools learn anything about the social reality in which he or she lives This book shows that an econometrician with the proper understanding of economic theory and the right kind of questions can gain knowledge about characteristic features of the social world It addresses varied topics in both classical and Bayesian econometrics offering ample evidence that its answer to the fundamental question is sound The first book to comprehensively explore economic theory and econometrics simultaneously *Econometrics and the Philosophy of Economics* represents an authoritative account of contemporary economic methodology About a third of the chapters are authored or coauthored by Heather Anderson Erik Birn Christophe Bontemps Jeffrey A Dubin Harald E Goldstein Clive W J Granger David F Hendry Herman Ruge Jervell Dale W Jorgenson Hans Martin Krolzig Nils Lid Hjort Daniel L McFadden Grayham E Mizon Tore Schweder Geir Storvik and Herman K van Dijk

**A Guide to Modern Economics** Michael Bleaney, Prof David Greenaway, 1996-07-04 This work provides a valuable review of the most important developments in economic theory and application over the last decade Comprising twenty seven specially

commissioned overviews the volume presents a comprehensive and student friendly guide to contemporary economics Previously published by Routledge as part of the Companion to Contemporary Economic Thought these essays are made available here for the first time in a concise paperback edition A Guide to Modern Economics will be a valuable guide to all those who wish to familiarize themselves with the most recent developments in the discipline *Idealization VI: Idealization in Economics* ,2023-12-28 Modelling our Changing World Jennifer L. Castle,David F. Hendry,2019-08-30 This open access book focuses on the concepts tools and techniques needed to successfully model ever changing time series data It emphasizes the need for general models to account for the complexities of the modern world and how these can be applied to a range of issues facing Earth from modelling volcanic eruptions carbon dioxide emissions and global temperatures to modelling unemployment rates wage inflation and population growth Except where otherwise noted this book is licensed under a Creative Commons Attribution 4 0 International License To view a copy of this licence visit <http://creativecommons.org/licenses/by/4.0/> Econometrics: Alchemy Or Science? David F. Hendry,2000-10-26 Econometrics Alchemy or Science analyses the effectiveness and validity of applying econometric methods to economic time series The methodological dispute is long standing and no claim can be made for a single valid method but recent results on the theory and practice of model selection bid fair to resolve many of the contentious issues The book presents criticisms and evaluations of competing approaches based on theoretical economic and econometric analyses empirical applications and Monte Carlo simulations which interact to determine best practice It explains the evolution of an approach to econometric modelling founded in careful statistical analyses of the available data using economic theory to guide the general model specification From a strong foundation in the theory of reduction via a range of applied and simulation studies it demonstrates that general to specific procedures have excellent properties The book is divided into four Parts Routes and Route Maps Empirical Modelling Strategies Formalization and Retrospect and Prospect A short preamble to each chapter sketches the salient themes links to earlier and later developments and the lessons learnt or missed at the time A sequence of detailed empirical studies of consumers expenditure and money demand illustrate most facets of the approach Material new to this revised edition describes recent major advances in computer automated model selection embodied in the powerful new software program PcGets which establish the operational success of the modelling strategy **Representation and Structure in Economics** Hsiang-Ke Chao,2020-04-08 This book provides a methodological perspective on understanding the essential roles of econometric models in the theory and practice Offering a comprehensive and comparative exposition of the accounts of models in both econometrics and philosophy of science this work shows how econometrics and philosophy of science are interconnected while exploring the methodological insight of econometric modelling that can be added to modern philosophical thought The notion of structure is thoroughly discussed throughout the book The studies of the consumption function of Trygve Haavelmo Richard Stone Milton Friedman David Hendry and Robert Lucas are taken as the case studies to

investigate their methodological implications of model and structure In addition to the semantic view of the scientific theories various philosophical accounts concerning scientific models are used to shed light on the methodological nature of these consumption studies in economics This book will be of great interest to scholars and students of methodology of economics and econometrics as well as anyone interested in the philosophy of science in an economic context Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W. Hofkes, 2013-03-09 There is widespread concern for long term environmental issues in relation to economic processes and developments Among the concerned scientists are economists who have taken up the challenge to apply economic insights and tools for the study of long term environment economy interactions and to give the concept of sustainable development economic hands and feet This book presents a pluralistic perspective on efforts problems and successes in this area This collection of papers was originally prepared for an international symposium titled Economic Modelling of Sustainable Development Between Theory and Practice which was hosted by the Vrije Universiteit in Amsterdam on December 20th 1996 The main motivation for this symposium was that the usefulness of the concept of sustainable development for theoretical and applied modelling is still being debated growth theorists resource economists ecological economists policy makers and many others are trying to deal with the concept in various and sometimes conflicting ways The aim of the symposium was to bring together different theoretical and implementational perspectives on modelling for sustainable development We hope that this volume will inform a wide audience about the perspectives and progress in this important area of research as well as stimulate further research notably on applied modelling and practical methods for the analysis of sustainable development at various spatial scales The papers have in due course been revised several times based on comments made by discussants referees and the editors

**Modelling Economic Capital** David Jamieson Bolder, 2022-05-06 How might one determine if a financial institution is taking risk in a balanced and productive manner A powerful tool to address this question is economic capital which is a model based measure of the amount of equity that an entity must hold to satisfactorily offset its risk generating activities This book with a particular focus on the credit risk dimension pragmatically explores real world economic capital methodologies and applications It begins with the thorny practical issues surrounding the construction of an industrial strength credit risk economic capital model defensibly determining its parameters and ensuring its efficient implementation It then broadens its gaze to examine various critical applications and extensions of economic capital these include loan pricing the computation of loan impairments and stress testing Along the way typically working from first principles various possible modelling choices and related concepts are examined The end result is a useful reference for students and practitioners wishing to learn more about a centrally important financial management device

**Finite Sample Econometrics** Aman Ullah, 2004-05-20 This text provides a comprehensive treatment of finite sample statistics and econometrics Within this framework the book discusses the basic analytical tools of finite sample econometrics and explores

their applications to models covered in a first year graduate course in econometrics      *Dynamic Disequilibrium Modeling: Theory and Applications* William A. Barnett, Giancarlo Gandolfo, Claude Hillinger, 1996-06-13 The organizers of the ninth symposium which produced the current proceedings volume were Claude Hillinger at the University of Munich Giancarlo Gandolfo at the University of Rome La Sapienza A R Bergstrom at the University of Essex and P C B Phillips at Yale University      *Research Strategies in the Social Sciences* Elinor Scarbrough, Eric Tanenbaum, 1998-07-30 In this single accessible volume a team of international experts sets out a range of analytic tools available to social scientists from the cutting edge of social science methodology In contrast to much of the existing literature which is often of daunting complexity this volume presents social scientists with some experience with a guide through the maze of advanced techniques applicable across the range of the social sciences The first chapters outline ways in which the revolution in computing power is transforming the working environment for social scientists extending their analytic reach and opening up new research horizons The empirical chapters each present a particular approach to data analysis discussing the underlying logic and demonstrating its application by working through a substantive example with mathematical reasoning kept to a minimum The theoretical chapters provide an introduction to recently developing approaches to social science research Each chapter includes ample references to other works in the field and to appropriate software programs for those who are keen to pursue a particular approach in greater detail      **Econometric Business Cycle Research** Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling

business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable
