THEORY OF MIND

The theory of mind is a concept in psychology that refers how someone ascribes mental states - such as beliefs, intentions, desires, and emotions - to both oneself and others.

DEFINITION

Premack & Woodruff (1978), the founders of the concept, explain theory of mind: "...one infers states that are not directly observable and one uses these states anticipatorily, to predict the behavior of others as well as one's own. These inferences, which amount to a theory of mind, are, to our knowledge, universal in human adults. " (p. 525).

COMPONENTS

- **Perception:** Perceptiveness can include the ability to identify facial expressions, body language, and other social cues that signal a person's emotional state.

- **Perspective-taking:** Perspective-taking refers to the capacity to put yourself in someone else's shoes. It involves looking at a situation from another person's point of view.
