Reductive Model of the Conscious Mind Galus,

Wieslaw, Starzyk, Janusz, 2020-08-21 Research on natural and artificial brains is proceeding at a rapid pace However the understanding of the essence of consciousness has changed slightly over the millennia and only the last decade has brought some progress to the area Scientific ideas emerged that the soul could be a product of the material body and that calculating machines could imitate brain processes However the authors of this book reject the previously common dualism the view that the material and spiritual psychic processes are separate and require a completely different substance as their foundation Reductive Model of the Conscious Mind is a forward thinking book wherein the authors identify processes that are the essence of conscious thinking and place them in the imagined simplified structure of cells able to memorize and transmit information in the form of impulses which they call neurons The purpose of the study is to explain the essence of consciousness to the degree of development of natural sciences because only the latter can find a way to embed the concept of the conscious mind in material brains The book is divided into three parts Part 1 works to convince readers that the emergence of consciousness does not require detailed knowledge of the structure and morphology of the brain with the exception of some specific properties of the neural network structure that the authors attempt to point out Part 2 proves that the biological structure of many natural brains fulfills the necessary conditions for consciousness and intelligent thinking Similarly Part 3 shows the ways in which artificial creatures imitating natural brains can meet these conditions which gives great hopes for building artificially intelligent beings endowed with consciousness Covering topics that include cognitive architecture the embodied mind and machine learning this book is ideal for cognitive scientists philosophers of mind neuroscientists psychologists researchers academicians and advanced level students The book can also help to focus the research of linguists neurologists and biophysicists on the biophysical basis of postulated information processing into knowledge structures Intelligence Science Zhongzhi Shi, 2012 Intelligence Science is an interdisciplinary subject dedicated to joint research on basic theory and technology of intelligence by brain science cognitive science artificial intelligence and others Brain science explores the essence of brain research on the principle and model of natural intelligence at the molecular cell and behavior level Cognitive science studies human mental activity such as perception learning memory thinking consciousness etc In order to implement machine intelligence artificial intelligence attempts simulation extension and expansion of human intelligence using artificial methodology and technology Research scientists from the above three disciplines work together to explore new concepts new theories and methodologies This book will introduce the concept and methodology of intelligence science systematically The whole book is divided into 18 chapters altogether It can be regarded as a textbook in courses of intelligence science cognitive science cognitive informatics etc for senior and graduate students It has important reference value for researchers engaged in fields such as intelligence science

brain science cognitive science neural science artificial intelligence psychology and so on **Thinking with Kierkegaard** Arne Grøn, 2022-12-31 Arne Grøn's reading of Søren Kierkegaard's authorship revolves around existential challenges of human identity. The 35 essays that constitute this book are written over three decades and are characterized by combining careful attention to the augmentative detail of Kierkegaard's text with a constant focus on issues in contemporary philosophy. Contrary to many approaches to Kierkegaard's authorship, Grøn does not read Kierkegaard in opposition to Hegel. The work of the Danish thinker is read as a critical development of Hegelian phenomenology with particular attention to existential aspects of human experience. Anxiety and despair are the primary existential phenomena that Kierkegaard examines throughout his authorship, and Grøn uses these negative phenomena to argue for the basically ethical aim of Kierkegaard's work. In Grøn's reading, Kierkegaard conceives human selfhood not merely as relational but also as a process of becoming the self that one is through the otherness of self-experience that is the body, the world, other people, and God. This book should be of interest to philosophers, theologians, literary studies scholars, and anyone with an interest not only in Kierkegaard but also in human identity.

Models of Man J.J. Dagenais, 2012-12-06 This essay is first a theoretical and historical study of some classical scientific ways of studying human being in the world. The more readily accessible and more commonly discussed models of being human were chosen for review here, but structuralism is included because I believe it will have the same impact in America as it has had in France, and I hope that American readers might be forewarned about what may be ideologically at stake before the technical and fruitful aspects of the movement become an academic fad in the United States. The subjects included are mainline experimental psychology from Wundt to Skinner with its relatively short-lived functionalist and Watsonian behaviorist formulations, holistic psychology from Brentano through Stumpf, Husserl, and Goldstein to Maslow, Rogers, and contemporary third force psychology, and the psychoanalytic model for which the only paradigm is Freud himself. Preeminence is given to psychological paradigms since their subject matter lies closest to the classical philosophical tradition from which philosophical anthropology emerged. This book is in the final analysis a prolegomenon to an articulated philosophical anthropology. Sociological models are also considered: the classical tradition from Comte to the present, and Marxist anthropology from the manuscripts of 1844 to the present. The structuralist model from Durkheim to Chomsky is also considered since it cuts across and gives new dimensions to all the foregoing models. The essay is second a phenomenological critique of these historico-theoretical considerations.

A Brief History of Artificial Intelligence Michael Wooldridge, 2021-01-19 From Oxford's leading AI researcher comes a fun and accessible tour through the history and future of one of the most cutting edge and misunderstood fields in science: Artificial Intelligence. The somewhat ill-defined long-term aim of AI is to build machines that are conscious, self-aware, and sentient machines capable of the kind of intelligent autonomous action that currently only people are capable of. As an AI researcher with 25 years of experience, professor Mike Wooldridge has learned to be obsessively cautious about such claims while still promoting an intense optimism about the

future of the field There have been genuine scientific breakthroughs that have made AI systems possible in the past decade that the founders of the field would have hailed as miraculous Driverless cars and automated translation tools are just two examples of AI technologies that have become a practical everyday reality in the past few years and which will have a huge impact on our world While the dream of conscious machines remains Professor Wooldridge believes a distant prospect the floodgates for AI have opened Wooldridge s A Brief History of Artificial Intelligence is an exciting romp through the history of this groundbreaking field a one stop shop for AI s past present and world changing future **The Collected Works of**

Crosby,2017-08-29 Questions relating to human freedom cannot be separated from questions relating to human consciousness The two are intricately entwined and neither can be understood apart from the other There is a widespread assumption today that we can understand the nature of human freedom even though there is an equally widespread acknowledgment that we have a lot yet to learn about the nature of human consciousness and its relations to the human body This separation of the two issues is false Attempts to prove it have failed and will continue to fail so long as the concept of freedom in its intimate connections with the nature of consciousness is not properly understood The kind of genuine freedom of thought and action defended in this book lies at the heart of responsible outlooks on our individual and social lives our hopes for the future the whole of our history as human beings and our relations to the natural world A Blueprint for the Hard Problem of Consciousness Paulo J. Negro,2019-02-11 A Blueprint for the Hard Problem of Consciousness addresses the fundamental mechanism that allows physical events to transcend into subjective experiences termed the Hard Problem of Consciousness Consciousness is made available as the abstract product of self referent realization of information by strange loops through the levels of processing of the brain Readers are introduced to the concept of the Hard Problem of Consciousness and related concepts followed by a critical discourse of different theories of consciousness Next the author identifies the fundamental flaw of the Integrated Information Theory IIT and proposes an alternative that avoids the cryptic intelligent design and panpsychism of the IIT This author also demonstrates how something can be created out of nothing without resorting to quantum theory while pointing out neurobiological alternatives to the bottom up approach of quantum theories of consciousness The book then delves into the philosophy of qualia in different physiological knowledge networks

spatial temporal and olfactory cortical signals for example to explain an action based model consistent with the generational principles of Predictive Coding which maps prediction and predictive error signals for perceptual representations supporting integrated goal directed behaviors Conscious experiences are considered the outcome of abstractions realized out of map overlays and provided by sustained oscillatory activity The key feature of this blueprint is that it offers a perspective of the Hard Problem of Consciousness from the point of view of the subject the experience of being the subject is predicted to be the realization of inference inversely mapped out of hidden causes of global integrated actions The author explains the consistencies of his blueprint with ideas of the Global Neuronal Workspace and the Adaptive Resonance Theory of consciousness as well as with the empirical evidence supporting the Integrated Information Theory A Blueprint for the Hard Problem of Consciousness offers a unique perspective to readers interested in the scientific philosophy and cognitive neuroscience theory in relation to models of the theory of consciousness

The Global Strategic Revolution - Third Millennium Strategic Culture Change Management Gebhard Deissler, 2012-06-04 Scientific Study from the year 2012 in the subject Politics General and Theories of International Politics language English abstract Those who seek military solutions by force in the global arena have not yet arrived in the new millennium They are trying to set precedents in this century for strategic options and solutions by force and military might that pertain to past millennia The crossing of the threshold to the new millennium was a historical occasion for progressing into a new era of global conflict resolution that has been ignored so far Enforcing negotiated solutions sounds like a contradiction in term due to its implication of using force in order to bring about negotiated solutions in the Middle East and elsewhere in the world Yet the use of force should be understood here as the use of a previous strategic concept for conflict resolution intended to bring about future oriented sustainable strategies in the shape of negotiated conflict resolution In other words diplomatic economic and political strategies can be supported by coercive forms of specific military strategy in order to force conflict partners to force themselves to adopt the negotiated conflict resolution strategy at the exclusion of violent military conflict resolution strategies In other words a change of millennia old patterns of conflict resolution strategies must be brought about if necessary by coercive means of all forms shapes and kinds that are below the level of hot armed conflict And there are quasi no limits to human intelligence as far as alternative ways and means of conflict resolution are concerned that differ from the old habits and patterns

Esalen Jeffrey J. Kripal, 2011-09-07 Jeffrey Kripal here recounts the spectacular history of Esalen the institute that has long been a world leader in alternative and experiential education and stands today at the center of the human potential movement Forged in the literary and mythical leanings of the Beat Generation inspired in the lecture halls of Stanford by radical scholars of comparative religion the institute was the remarkable brainchild of Michael Murphy and Richard Price Set against the heady backdrop of California during the revolutionary 1960s Esalen recounts in fascinating detail how these two maverick thinkers sought to fuse the spiritual revelations of the East with the scientific revolutions of the West or to combine

the very best elements of Zen Buddhism Western psychology and Indian yoga into a decidedly utopian vision that rejected the dogmas of conventional religion In their religion of no religion the natural world was just as crucial as the spiritual one science and faith not only commingled but became staunch allies and the enlightenment of the body could lead to the full realization of our development as human beings An impressive new book Kripal has written the definitive intellectual history of the ideas behind the institute San Francisco Chronicle Kripal examines Esalen s extraordinary history and evocatively describes the breech birth of Murphy and Price s brainchild His real achievement though is effortlessly synthesizing a dizzying array of dissonant phenomena Cold War espionage ecstatic religiosity incongruous pairings Darwinism Tantric sex and otherwise schizy ephemera psychedelic drugs spaceflight into a cogent satisfyingly complete narrative Atlantic Monthly Kripal has produced the first all encompassing history of Esalen its intellectual social personal literary and spiritual passages Kripal brings us up to date and takes us deep beneath historical surfaces in this definitive elegantly written book Playboy

Quantum Information and Consciousness Danko D. Georgiev,2017-12-06 I loved the book This book is not just interesting it is exciting I have probably read every significant book in the field and this is the strongest and most convincing one yet It is also one of the most comprehensive in its explanations I shall most certainly recommend the book to colleagues Richard G Petty MD a very good introduction to the basic theory of quantum systems Dr Georgiev s book aptly prepares the reader to confront whatever might be in store later from the Foreword by Prof James F Glazebrook Eastern Illinois University This book addresses the fascinating cross disciplinary field of quantum information theory applied to the study of brain function It offers a self study guide to probe the problems of consciousness including a concise but rigorous introduction to classical and quantum information theory theoretical neuroscience and philosophy of the mind It aims to address long standing problems related to consciousness within the framework of modern theoretical physics in a comprehensible manner that elucidates the nature of the mind body relationship The reader also gains an overview of methods for constructing and testing quantum informational theories of consciousness

Architecture and Embodiment Harry Francis Mallgrave,2013-06-26 In recent years we have seen a number of dramatic discoveries within the biological and related sciences Traditional arguments such as nature versus nurture are rapidly disappearing because of the realization that just as we are affecting our environments so too do these altered environments restructure our cognitive abilities and outlooks If the biological and technological breakthroughs are promising benefits such as extended life expectancies these same discoveries also have the potential to improve in significant ways the quality of our built environments This poses a compelling challenge to conventional architectural theory This is the first book to consider these new scientific and humanistic models in architectural terms

Constructed as a series of five essays around the themes of beauty culture emotion the experience of architecture and artistic play this book draws upon a broad range of discussions taking place in philosophy psychology biology neuroscience and anthropology and in doing so questions what implications these discussions hold for architectural design Drawing upon a wealth of research Mallgrave argues that we should turn our focus away from the objectification of architecture treating design as the creation of objects and redirect it back to those for whom we design the people inhabiting our built environments

The Routledge Companion to Historical Theory Chiel van den Akker, 2021-11-15 This Companion provides a wide ranging and up to date overview of the conceptual issues that history as a discipline and mode of thought gives rise to The book offers both historical and systematic treatments of these issues as well as addressing their contemporary relevance Structured in three parts Modes and Schools of Historical Thought Epistemology and Metaphysics of History and Issues and Challenges in Historical Theory it offers the reader a wide scope and expert treatment of each topic in this vibrant field that can be read in any order An international team of experts both discuss the basis of their topic and present their own view offering the reader a cutting edge contribution while ensuring their chapters are of interest to both students and specialists in the field of historical theory and engaging with the very nature of historical thought the metaphysics of historical existence the politics of history writing and the intelligibility of the historical process The volume is an indispensable companion to the study of history and essential reading for anyone interested in the reflection on the nature of history and our historical existence

Being in Conscience: A Theory of Ethics Lambros Philippou, 2023-01-31 This book aims to suggest a worldview departing from an articulation of a theory of conscience It analyses the constitutive parts of conscience a concept that has not been thoroughly examined and analysed in the discussions on ethics Having the mechanisms of production of conscience as a point of reference the book proceeds to discuss the concepts of subjective and collective evil The concept of being in enhanced conscience aims to position the subjective conscience in human historicity Based on the analysis of the roots of conscience the subject is placed in the public sphere from the point of view of its corporeal harmony and disharmony as the conditions for its binding with the institutions and the spirit of a worldsphere The book then expands its scope by addressing the question of what makes a worldsphere functional and dysfunctional This analysis is useful for scholars who are interested in the deep structural conditions that produce and sustain a liberal democratic state Through the analysis of inner worldly and inter worldly temporality the mode of the creative rhythm is depicted by underlining the creative divergence that occurs not only within distinct worlds but also between worldspheres The mediation of this analysis introduces the concept of planetary functionality whereby what is at stake is the islands of functionality that serve the survival of an interconnected world The theory of conscience is applied also to the analysis of the state and of the economy Conscience is also identified with the properties attributed to God suggesting a new understanding of the meaning of religion and its role in human historicity Finally it argues that we should understand the future as the

future of conscience that can function as the only motor of historical evolution **Theory Now and Then** Joseph Hillis Miller,1991 This publication brings together the more overtly theoretical essays by J Hillis Miller published between 1966 and 1989 Dust jacket *Developing a Model of Islamic Psychology and Psychotherapy* Abdallah Rothman,2021-07-29 At a time when there is increasing need to offer psychotherapeutic approaches that accommodate clients religious and spiritual beliefs and acknowledge the potential for healing and growth offered by religious frameworks this book explores psychology from an Islamic paradigm and demonstrates how Islamic understandings of human nature the self and the soul can inform an Islamic psychotherapy Drawing on a qualitative grounded theory analysis of interviews with Islamic scholars and clinicians this unique volume distils complex religious concepts to reconcile Islamic theology with contemporary notions of psychology Chapters offer nuanced explanations of relevant Islamic tradition and theological sources consider how this relates to Western notions of psychotherapy and common misconceptions and draw uniquely on first hand data to develop a new theory of Islamic psychology This in turn informs an innovative and empirically driven model of practice that translates Islamic understandings of human psychology into a clinical framework for Islamic psychotherapy An outstanding scholarly contribution to the modern and emerging discipline of Islamic psychology this book makes a pioneering contribution to the integration of the Islamic sciences and clinical mental health practice It will be a key resource for scholars researchers and practicing clinicians with an interest in Islamic psychology and Muslim mental health as well as religion spirituality and psychology more broadly **Self-Consciousness** Masakazu Shoji,2013-08-07 The study of self consciousness helps humans understand themselves and restores their identities But self consciousness has been a mystery since the beginning of history and this mystery cannot be resolved by conventional natural science In *Self Consciousness* author Masakazu Shoji takes the mystery out of self consciousness by proposing the idea that the human brain and body are a biological machine A former VLSI microprocessor designer and semiconductor physicist Shoji was guided by the ideas of ancient sages to create a conceptual design of a human machine brain model He explains how it works how it senses itself and the outside world and how the machine creates the sense of existence of the subject SELF to itself just as a living human brain does A follow up to Shojis previous book *Neuron Circuits Electronic Circuits and Self Consciousness* this new volume examines self consciousness from three unconventional viewpoints to present a complex theory of the mind and how self consciousness develops **Technoethics and the Evolving Knowledge Society: Ethical Issues in Technological Design, Research, Development, and Innovation** Luppicini, Rocci,2010-01-31 This book introduces the reader to the key concepts and issues that comprise the emerging field of Technoethics the interdisciplinary field concerned with all ethical aspects of technology within a society shaped by technology Provided by publisher
