Models Of Arms Race:

Models of Arms Race Jayantanuja Bandyopadhyaya, 1991 The Present Book Includes Five Papers Of An Essentially Mathematical Nature Presented At A National Seminar On Arms Race And Security Organized By The School Of International Relations And Strategic Studies On 8 10 March 1990 At Jadavpur University Formal Models of Arms Races Dagobert L. Brito, Michael D. Intriligator, 1976 *Arms Race Theory* Craig Etcheson, 1989 For most of the twentieth century social scientists have attempted to understand the causes of military competition From this struggle has evolved the Richardson Tradition of Arms Race Analysis a distinct body of scientific literature that uses a variety of mathematical techniques and theoretical ideas to solve the puzzle of what drives military interaction among nations Etcheson explores this intellectual journey and projects the paths along which the Richardson Tradition must go if it is to obtain its objective understanding and control of potentially unnecessary organized social violence Arms Race Theory examines thoroughly the literature of the Richardson Tradition from the writings of Lewis Fry Richardson through the most recent attempts of his students to resolve the fundamental questions about interaction in arms races Etcheson documents the application of the procedures of positive physical science to social problems and identifies the reasons why Richardson and his students have been frustrated in their efforts According to the author students of the Richardson Tradition adhere to an atomistic and reductionist perspective that denies the relevance of human values and intentions He focuses on the idea of strategy as a gateway to an understanding of the social causes of arms accumulation Etcheson prepares the way for a new phase in the Richardson Tradition by identifying new theoretical foci and methodological techniques His analysis coupled with the most comprehensive bibliography of the literature of the Richardson Tradition currently available is a significant contribution to the growing body of scholarship in peace research and international relations theory **Some Simple Models of Arms Races** Michael D. Intriligator, 1964 The study simplifies the complex structure of arms races in the real world by the assumption of two contenders each having one policy variable weapons stocks With these simplifications arms races are studied by means of reaction curves that indicate optimal weapons stocks given the weapons stocks of the opponent Both classical models are extended to allow for either a deterrent or an arms depriving strategy and constraints on weapons stocks Strategic factors lead to stable points of mutual deterrence or explosive regions in which one side can disarm its opponent and the opponent cannot deter Constraints lead to a high level equilibrium if both sides pursue an arms depriving strategy If both sides then know the constraint of the opponent a low level of weapons holdings would exist guaranteeing for both the same desirable property of the high level equilibrium both sides are prevented from attaining the capability to disarm the opponent The analysis is suggestive only it does not consider the many dimensions of policy Author Arms Races, Arms Control, and Conflict Analysis Walter Isard, 1989-02-24 Demonstrating the ways in which work in a broad range of fields can be pulled together in the analysis of conflict this book provides the reader with a general introduction to the principles of conflict analysis and lays a

methodological foundation for the further development of the interdisciplinary field of peace science The text begins with an extensive survey of arms race models from the classic Richardson model to models exploring the effects of factors such as the domestic and international economic environment public opinion and party politics and weapons technology and information development The processes of individual and group problem solving in both crisis and non crisis conditions are examined drawing on work in economics operations research cognitive science and artificial intelligence Building on this diverse body of work the author moves on to develop a framework for conflict management with which to approach a variety of conflict situations and applies this procedure to the United States Soviet arms control conflict Walter Isard is cited by Mark Blaug as one of the Great Economists Since Keynes CUP 1989 paper edition

Arms Races in International Politics Thomas Mahnken, Joseph Maiolo, David Stevenson, 2016-01-14 This volume provides the first comprehensive history of the arms racing phenomenon in modern international politics drawing both on theoretical approaches and on the latest historical research Written by an international team of specialists it is divided into four sections before 1914 the inter war years the Cold War and extra European and post Cold War arms races Twelve case studies examine land and naval armaments before the First World War air land and naval competition during the 1920s and 1930s and nuclear as well as conventional weapons since 1945 Armaments policies are placed within the context of technological development international politics and diplomacy and social politics and economics An extended general introduction and conclusion and introductions to each section provide coherence between the specialized chapters and draw out wider implications for policymakers and for political scientists Arms Races in International Politics addresses two key questions what causes arms races and what is the connection between arms races and the outbreak of wars

Differential Equations Courtney Brown, 2007-05-18 Differential Equations A Modeling Approach explains the mathematics and theory of differential equations Graphical methods of analysis are emphasized over formal proofs making the text even more accessible for newcomers to the subject matter

Tacit Bargaining, Arms Races, and Arms Control George W. Downs, David M. Rocke, 2025-10-01 When most people including social scientists reflect on the ways that nations resolve their differences they tend to think in terms of polar alternatives war versus negotiation This perspective ignores a third path tacit bargaining which is applicable as this book shows to a wide variety of international issues and is especially germane to the problem of treaty maintenance

Developed Countries Saadet Deger,1982 Rational Theory of International Politics Charles L. Glaser,2010-04-26 Within the realist school of international relations a prevailing view holds that the anarchic structure of the international system invariably forces the great powers to seek security at one another's expense dooming even peaceful nations to an unrelenting struggle for power and dominance Rational Theory of International Politics offers a more nuanced alternative to this view one that provides answers to the most fundamental and pressing questions of international relations Why do states sometimes compete and wage war while at other times they cooperate and pursue peace Does competition reflect pressures generated by the anarchic international system or rather states own expansionist goals Are the United States and China on a collision course to war or is continued coexistence possible Is peace in the Middle East even feasible Charles Glaser puts forward a major new theory of international politics that identifies three kinds of variables that influence a state's strategy the state's motives specifically whether it is motivated by security concerns or greed material variables which determine its military capabilities and information variables most importantly what the state knows about its adversary's motives Rational Theory of International Politics demonstrates that variation in motives can be key to the choice of strategy that the international environment sometimes favors cooperation over competition and that information variables can be as important as material variables in determining the strategy a state should choose

Nonlinear Physics with Maple for Scientists and Engineers Richard H. Enns,George C. McGuire,2000-05-11 Philosophy of the Text This text presents an introductory survey of the basic concepts and applied mathematical methods of nonlinear science as well as an introduction to some simple related nonlinear experimental activities Students in engineering physics chemistry mathematics computing science and biology should be able to successfully use this book In an effort to provide the reader with a cutting edge approach to one of the most dynamic often subtle complex and still rapidly evolving areas of modern research nonlinear physics we have made extensive use of the symbolic numeric and plotting capabilities of the Maple software system applied to examples from these disciplines No prior knowledge of Maple or computer programming is assumed the reader being gently introduced to Maple as an auxiliary tool as the concepts of nonlinear science are developed The CD ROM provided with this book gives a wide variety of illustrative non linear examples solved with Maple In addition numerous annotated examples are sprinkled throughout the text and also placed on the CD An accompanying set of experimental activities keyed to the theory developed in Part I of the book is given in Part II These activities allow the student the option of hands on experience in exploring nonlinear phenomena in the REAL world Although the experiments are easy to perform they give rise to experimental and theoretical complexities which are not to be underestimated
