**Raising the Acceptance of Rank Reversing Redistributions** Patricia F. Zauchner, 2024-07-31 Redistribution is a major objective of welfare states In certain cases redistribution not only reduces the financial differences between some individuals or groups but also changes their positions in a financial ranking Prior studies have indicated that such rank reversals can reduce support for redistribution This book addresses this issue by arguing that if redistribution is aimed at meeting needs rather than promoting equality the negative effect of rank reversals on the acceptance of redistribution can be reduced The argument is

first supported by a theoretical exploration which among others endeavors to incorporate a no reranking principle into the well established list of distributive justice principles It shows that although individuals may apply the no reranking principle the principle is normatively weak especially compared to the need principle The argument is further supported by evidence from an online third party dictator game in which each decision maker had to redistribute money between two other participants It varied whether those participants were above or below a specific needs threshold and whether a transfer would reverse ranks or not The results showed that when redistribution was required to satisfy the poorer person's needs the negative effect of rank reversals on the acceptance of redistribution almost vanished

*Toward a Theory of Governance* Jacques Lenoble, Marc Maesschalck, 2003-01-01 For more than a century Western democracies have struggled to keep faith with both economic efficiency and social justice Yet reconciliation of these factors remains as baffling as ever Among the many voices clamoring today for a theory of collective action we hear most often of the great chasm between legitimacy and efficiency It is the contention of the authors of this ground breaking book that these antinomies can be seen as distinct moments of application in the operation of normative judgement and that a reflexive treatment of norms of collective action by clarifying limitations in rules and beliefs allows us to develop mechanisms to correct the limiting effects of such judgements and act accordingly Drawing on and developing recent trends in the social sciences The Action of Norms

presents a powerful new theory of governance with far reaching implications for the future of law the judiciary and justice itself Among the contributing modern ideas that are explained and developed as pillars of the authors thesis are the following critiques of the political theory of interest groups the economic theory of efficiency deliberative democracy rational choice theory the evolutionist debate learning process theory and the theory of risk Lenoble and Maesschalck achieve a remarkable synthesis of relevant thought about forms of social organization from Kant and Fichte through Hayek Rawls and Habermas to current theory and place it at the service of a new and effective theory of the norm that promises to greatly elucidate the role of law and legal practice in the continuing development of democratic institutions      New Concepts and Trends of Hybrid Multiple Criteria Decision Making Gwo-Hshiung Tzeng,Kao-Yi Shen,2017-08-15 When people or computers need to make a decision typically multiple conflicting criteria need to be evaluated for example when we buy a car we need to consider safety cost and comfort Multiple criteria decision making MCDM has been researched for decades Now as the rising trend of big data analytics in supporting decision making MCDM can be more powerful when combined with state of the art analytics and machine learning In this book the authors introduce a new framework of MCDM which can lead to more accurate decision making Several real world cases will be included to illustrate the new hybrid approaches      International Business Strategy Alain Verbeke,2009-01-12 This textbook shows how the key concepts from business strategy literature can be applied to create successful global business
