Inferred Functions of Performance and Learning Siegfried Engelmann, Donald Steely, 2003-12-08 This ambitious highly theoretical book provides a capstone for the careers of two very distinguished scholars It begins with an analysis of what functions and systems must exist for any organism or machine to perform an unlearned act that is with an analysis of what must be wired into the organism or machine Once the basics of unlearned responding have been established the authors then systematically show how learning mechanisms can be layered onto that foundation in ways that account for the performance of new learned operations that eventually culminate in the acquisition of higher order operations that involve concepts and language This work is of interest to various practitioners engaged in analyzing and creating behavior the ethnologist the instructional designer the learning psychologist the physiologist neurobiologist and particularly the designer of intelligent machines Natural and Artificial Intelligence A. de Callatay, 2014-06-28 How does the mind work How is data stored in the brain How does the mental world connect with the physical world The hybrid system developed in this book shows a radically new view on the brain Briefly in this model memory remains permanent by changing the homeostasis rebuilding the neuronal organelles These transformations are approximately abstracted as all or none operations Thus the computer like neural systems become plausible biological models This illustrated book shows how artificial animals with such brains learn invariant methods of behavior control from their repeated actions These robots can make decisions in any circumstances and reason by analogy whenever possible This new and expanded edition includes a prologue exploring the problems which have stopped the development of fully fledged brain models The causes of these deadlocks are listed as potential misconceptions about brain principles neural networks nervous systems robotics programming and decision logic
