Language Change and Variation from Old English to Late Modern English Merja Kytö, John Scahill, Harumi Tanabe, 2010 This collection reflects Minoji Akimoto's concern with studies of change in English that are theoretically informed but founded on substantial bodies of data Some of the contributors focus on individual texts

and text types among them literature and journalism others on specific periods from Old English to the nineteenth century but the majority trace a linguistic process such as negation passivisation complementation or grammaticalisation through the history of English While several papers take a fresh look at manuscript evidence the harnessing of wideranging electronic corpora is a recurring feature methodologically The linguistic fields treated include word semantics stylistics orthography word order pragmatics and lexicography The volume also contains a bibliography of Professor Akimoto's writings and an index of linguistic terms

Taylor, Esa Saarinen,1994 The authors propose a new philosophy of communication which reflects the media and technology of the electronic age *Modern Vaccinology* Edouard Kurstak,2013-11-09 The recent developments in modern vaccinology are mainly based on i cloning of microbial genes into

recombinant vectors containing genetic information for expression of desired neutralizing immunogens ii alternatives of attenuated vectors with deleted genes permitting the insertion of several foreign genes expressing antigens exposed to the host immune system during the abortive replication of such vectors iii combined vaccines with the aim to protect against many diseases with a limited number of administrations iv evidence demonstrating the ability of animals to respond serologically to DNA injections considered as a potential method of vaccination v the possibility to manipulate the immune system with new and improved immunomodulators enhancing the immune response and vi new microcarrier systems for particular immunogens or immunomodulators delivery either in a single dose or sustained release and presentation to the immune system for a relevant response New vaccines being developed are mainly based on viral bacterial or other vectors modified with genetic engineering technology to possess and express desired antigens for vaccination against single or multiple infections Existing combined vaccines like diphtheria tetanus pertussis DTP are also experimented with new additional components like recombinant hepatitis B virus surface antigen inactivated poliovirus and Haemophilus influenzae type b immunogens in order to produce multivalent vaccines Such types of vaccines permitting the reduction of multiple medical visits is of particular interest to pediatric immunization programs and would benefit especially the developing countries assuring better vaccine compliance with immunization schedules
