Modern Colorants Synthesis And Structure:

Modern Colorants: Synthesis and Structure A.T. Peters,H.S. Freeman,1994-12-31 Although the research activities of dyestuff chemists worldwide have been influenced to a great extent in recent years by the need to respond to a variety of environmental issues associated with the manufacture and application of synthetic dyes and pigments a significant level of targeted research continues to be devoted to new chemistry aimed at enhancing the technical properties of dyes in commerce This book is a presentation of various aspects of basic research conducted during the past decade but not reported in the recent review literature The coverage herein is unique in that it emphasizes systematic approaches commonly utilized in the design and synthesis of dyes and pigments and the required intermediates While it is well known that certain transition metals are important in the synthesis of technically viable metallized dyes for polyamide and protein fibers these metals are demonstrated in Chapter 1 also to be effective agents in the regiospecific placement of substituents into azo compounds The scope and limitations of this chemistry are presented In other synthetic work a description of the different processes employed to produce the major families of reactive dyes is presented In Chapter 4 special attention is given to reactive dyes containing more than one reactive group and to the more recent developments in the field The two chapters which follow provide a review of the recent literature pertaining to novel chromophores and dyes for the D2T2 process respectively

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the

coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. **Physico Chemical Aspects of Textile Coloration** provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing, dyeing as an area of study as well as the terminology employed in dyeing technology and science, contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level, fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption, detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres, polyester, polyamide, wool, polyacrylonitrile and silk fibres, non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium. The up to date text is supported by a large number of tables, figures and illustrations as well as footnotes and widespread use of references to published work. The book is essential reading for students, teachers, researchers and professionals involved in textile coloration.

Chromic Phenomena Peter Bamfield, 2007-10-31. Chromic phenomena or those produced by materials which exhibit colour in response to a chemical or physical stimulus have increasingly been at the heart of high tech developments in a variety of fields in the last decade. Many of the newer technologies which are at the cutting edge of research are multi disciplinary involving researchers from areas as diverse as physics, biology, materials science and electronic engineering. **Chromic Phenomena** covers five main areas: Colour change materials such as photochromic, thermochromic and electrochromic materials; Materials which absorb and reflect light; the classical dyes and pigments; Luminescent phenomena including phosphorescence, fluorescence and electroluminescence; Materials which absorb light and transfer energy eg photosensitisers, infra red absorbers and laser addressable compounds. Phenomena involving the manipulation of light by chemicals such as liquid crystals, lustre pigments, optoelectronics and photonics. Providing an entry point both for new researchers and for established ones, this book with its emphasis on the technological applications of these chromic phenomena develops and investigates new applications for colour chemistry. It will be of interest to industrialists and professionals in the biological, medicinal, electronics, telecommunications and colorant industries as well as academics in these fields.

Chemistry of the Textiles Industry C. Carr, 1995-05-31. The manufacture and processing of textiles is a complex and essential industry requiring many diverse skills to ensure profitability. New products are continually being developed and reflect the energy and innovation of those working in the field. This book focuses on the technological aspects of the chemical processing of textiles and on the modifications necessary for specific

work environments Coverage ranges from fibre structure and its relationship to tensile properties textile aesthetics comfort physiology and end use performance through to the effect of domestic processing by the consumer on the textile product The industry is constantly under environmental pressure and the book examines the nature of environmental control and the development of alternative technology to produce less environmental impact In order to provide a balanced view of the current situation authors have been drawn from academia research institutes and industry to produce a text that will be useful to both industrial readers and university students In conclusion I would like to thank the authors for their dedication and their contributions

Stimulating Concepts in Chemistry Fritz Vögtle, J. Fraser Stoddart, Masakatsu Shibasaki, 2000 Fresh ideas have always been a necessary ingredient for progress in chemistry Without a continuous supply of stimulating ideas from creative researchers there would be no new insights into the subject But what are some of the ideas that pervade modern chemistry The answer to this question is to be found in Stimulating Concepts in Chemistry In a collection of 24 essays a group of leading researchers provides an overview of the most recent developments in their fields Readers can find out about modern concepts in chemistry such as self assembly nanochemistry and molecular machines Moreover many spectacular advances have been achieved from the fusion of chemistry with life and materials science a development which is illustrated by contributions on enzyme mimics molecular wires and chemical sensors Further the essayists write about new nanomaterials efficient methods in synthesis and big biomolecules indeed many of the topics that have dominated some of the recent discussions in chemistry This outstanding text makes use of a special layout to reflect the editors aim of presenting concepts in the form of essays Thus the book is not merely another source of knowledge but is intended to stimulate readers to develop their own ideas and concepts This format should help to make the book interesting to a wide range of scientists Students of chemistry will benefit from the different style of presentation of their subject while researchers in industry and academia will welcome the exciting way in which some of the most challenging concepts in modern chemistry are presented

Colorants for Non-Textile Applications H.S. Freeman, A.T. Peters, 2000-05-03 This volume examines the chemistry of natural and synthetic dyes produced for non textile markets where much new basic research in color chemistry is now taking place The first group of chapters covers the design synthesis properties and application technology pertaining to dyes for digital printing and photography The reader will be pleased with the breadth and depth of information presented in each case Of particular interest is the discussion of strategies for the design of dyes in these categories with emphasis on enhancing technical properties In view of certain new developments the ink jet chapter includes results from studies pertaining to dyes for textiles The three chapters comprising Section II of this volume cover the broad subject of dyes for food drug and cosmetic applications and then provide an in depth look at dyes for biomedical applications and molecular recognition The chapter on dyes for molecular recognition places emphasis on applications in the

biological sciences including sensory materials and artificial receptors While the former two topics have been covered elsewhere in the past the present chapters are unequalled in scope Section III provides an in depth review of the design of laser dyes and dye based functional materials In the first of the two chapters the major principles of laser operation are summarized This is followed by a discussion of spectroscopic properties such as activation and deactivation of absorbed light by laser dyes Approaches to the development of new laser dyes are presented The second chapter pertains to the synthesis of dicyanopyrazine based multifunctional dyes The visible and fluorescence spectra of these dyes in solution and the solid state are correlated with their three dimensional molecular structures Molecular stacking behavior and solid state properties of these multifunctional dye materials are presented The final group of chapters pertains to natural dyes and dyes for natural substrates In recent years the impression among certain consumers that natural is better safer has generated much interest in the use of natural dyes rather than synthetics This has led to a few short discussion papers in which the environmental advantages to using natural dyes have been questioned The initial chapter in this group provides both a historical look at natural dyes and a comprehensive compilation of natural dye structures and their sources Though natural dyes are of interest as colorants for textiles selected ones are used primarily in food and cosmetics Chapter ten provides an update on the author's previous reviews of structure color relationships among precursors employed in the coloration of hair Chemical constitutions characterizing hair dye structures are presented along with a summary of available precursors and their environmental properties Similarly the chapter on leather dyes covers constitutions and nomenclature in addition to providing interesting perspectives on the origin and use of leather the dyeing of leather and key environmental issues This volume is concluded with another look at colors in nature In this case rather than revisiting colors in plant life an interesting chapter dealing with color in the absence of colorants is presented Chapter twelve covers basic concepts of color science and illustrates how 3 D assemblies leading to a plethora of colors are handled in nature It is our hope that this atypical color chemistry chapter will invoke ideas that lead to the design of useful colorants The chapters presented in this volume demonstrate that color chemistry still has much to offer individuals with inquiring minds who are searching for a career path This work highlights the creativity of today's color chemists and the wide variety of interesting non textile areas from which a career can be launched

Advanced Surface Coating Techniques for Modern Industrial Applications Roy, Supriyo, Bose, Goutam

Kumar, 2020-09-18 In engineering there are often situations in which the material of the main component is unable to sustain long life or protect itself from adverse operating environments. Moreover, in some cases different material properties such as anti-friction and wear, anti-corrosive, thermal resistive, super hydrophobic, etc. are required as per the operating conditions. If those bulk components are made of such materials and possess those properties, the cost will be very high. In such cases, a practical solution is surface coating, which serves as a protective barrier to the bulk material from the adverse environment. In the last decade, with enormous effort, researchers and scientists have developed suitable materials to overcome those unfavorable operating conditions, and they have used advanced deposition techniques to enhance the adhesion and surface texturing of the coatings. *Advanced Surface Coating Techniques for Modern Industrial Applications* is a highly sought reference source that compiles the recent research trends in these new and emerging surface coating materials, deposition techniques, properties of coated materials, and their applications in various engineering and industrial fields. The book particularly focuses on 1) coating materials including anti-corrosive materials and nanomaterials; 2) coating methods including thermal spray and electroless deposition; and 3) applications such as surface engineering and thin film application. The book is ideal for engineers, scientists, researchers, academicians, and students working in fields like material science, mechanical engineering, tribology, chemical and corrosion science, bio-medical engineering, biomaterials, and aerospace engineering.

Physico-Chemical Principles of Color Chemistry A.T. Peters, H.S. Freeman, 1996-05-31 At the beginning of this series of volumes on Color Chemistry, the editors pointed to a number of events that have served as stimuli for technological advances in the field, thus preventing dyestuff manufacturing from becoming what might otherwise be viewed by now as a sunset industry. The volumes which followed have provided ample evidence for our belief that the field of colour chemistry is very much alive, though arguably in need of further stimulus. For instance, a viable approach to the design of new chromophores and to the design of metal-free acid-direct and reactive dyes having fastness properties comparable to their metallized counterparts represent the kind of breakthroughs that would help ensure the continued success of this important field. While it must be acknowledged that serendipity smiled on our discipline at its inception and has repeated the favor from time to time, since then few would argue against the proposition that most of the significant advances in the technology associated with any scientific discipline result from research designed to enhance our understanding of the fundamental causes for experimental observations, many of which are pursued because they are unexpected, intriguing, and intellectually stimulating. Little reflection is required for one who knows the history of the dyestuff industry to realize that this is certainly true in the colour chemistry arena, as it was basic research that led to fiber-reactive dyes, dyes for high technology, and modern synthetic

organic pigments
