Ahamed,Victor B. Lawrence,2012-12-06 Intelligent Broadband Multimedia Networks is a non mathematical but highly systems oriented coverage of modern intelligent information networks This volume focuses on the convergence of computers and communications technologies Most of the concepts that are generic to all intelligent networks and their microscopic and macroscopic functions are presented This book includes specific architectures that can be used by network designers and planners telecommunications managers computer scientists and telecommunications professionals The breadth of this coverage and the systems orientation of this work make the text suitable for use in advanced level

courses on intelligent communications networks The material in this volume ranges from defining intelligent networks to more specific coverage of educational medical and knowledge based networks Each of the 20 chapters address issues that can help make the transition from computer design to the underlying concepts of modern telecommunications systems to considerations necessary for the implementation of intelligent network services Special and timely coverage of emerging technologies such as HDSL ADSL BISDN wireless broadband access ATM and other topics are given expanded treatment The authors have included design methodologies for installing intelligence into almost any communications systems and procedures for using such intelligence according to the type of function expected from these networks Unique features of the book are a 64 page glossary of key terms with expanded explanations used in the field a 23 page index that makes it easy to search for important information running headers on each page to help the busy professional use the book as a reference design tool complete references including additional reading for more detailed information and accurate and concise information to help telecommunications professionals understand the intricacies of the field

Architecture and Protocols for High-Speed Networks Otto Spaniol, André Danthine, Wolfgang Effelsberg, 2013-06-29 Multimedia data streams will form a major part of the new generation of applications in high speed networks Continuous media streams however require transmission with guaranteed performance In addition many multimedia applications will require peer to multipeer communication Guaranteed performance can only be provided with resource reservation in the network and efficient multipeer communication must be based on multicast support in the lower layers of the network *Architecture and Protocols for High Speed Networks* focuses on techniques for building the networks that will meet the needs of these multimedia applications In particular two areas of current research interest in such communication systems are covered in depth These are the protocol related aspects such as switched networks ATM MAC layer network and transport layer and the services and applications *Architecture and Protocols for High Speed Networks* contains contributions from leading world experts giving the most up to date research available It is an essential reference for all professionals engineers and researchers working in the area of high speed networks
