

Elemental Analysis

This chapter includes no detailed description of methods to determine individual mineral components. Such procedures are described in general textbooks of inorganic analysis, standard reference books on food analysis, and specialized textbooks on the determination of minerals in biological materials. The principles of instrumental methods used in the determination of mineral components and trace elements also were described in previous chapters of this book. This chapter is primarily concerned with the applications of those principles to food analysis.

Developments in the measurement of trace metal components in foods were described by LaFluer (1976), Winefordner (1976), Bratter and Schramel (1980), Das (1983), Schwedt (1984), and Benton-Jones (1984). Tshopel and Tolg (1982) reviewed the basic rules that have to be followed in trace analyses to obtain precise and accurate results at the nanogram and pictogram levels. These rules are as follows:

1. All materials used for apparatus and tools must be as pure and inert as possible. These requirements are only approximately met by quartz, platinum, glassy carbon, and, to a lesser degree,
