Davis II, 2019-09-06 In the nineteenth century paradigm of architectural organicism the notion that buildings possessed character provided architects with a lens for relating the buildings they designed to the populations they served Advances in scientific race theory enabled designers to think of race and style as manifestations of natural law just as biological processes seemed to inherently regulate the racial characters that made humans a perfect fit for their geographical contexts architectural characters became a rational product of design Parallels between racial and architectural characters provided a rationalist model of design that fashioned some of the most influential national building styles of the past from the pioneering concepts of French structural rationalism and German tectonic theory to the nationalist associations of the Chicago Style the Prairie Style and the International Style In Building Character Charles Davis traces the racial charge of the architectural writings of five modern theorists Eugene Emmanuel Viollet le Duc Gottfried Semper Louis Sullivan Frank Lloyd Wright and William Lescaze to highlight the social political and historical significance of the spatial structural and ornamental elements of modern architectural styles *Planning and Urban Design Standards* American Planning Association, 2006-02-03 From the publishers of Architectural Graphic Standards this book created under the auspices of The American Planning Association is the most comprehensive reference book on urban planning design and development available today Contributions from more than two hundred renowned professionals provide rules of thumb and best practices for mitigating such environmental impacts as noise traffic aesthetics preservation of green space and wildlife water quality and more You get in depth information on the tools and techniques used to achieve planning and design outcomes including economic analysis mapping visualization legal foundations and real estate developments Thousands of illustrations examples of custom work by today's leading planners and insider information make this work the new standard in the field Order your copy today The Architecture of Use Stephen Grabow, Kent Spreckelmeyer, 2014-10-03 By analyzing ten examples of buildings that embody the human experience at an extraordinary level this book clarifies the central importance of the role of function in

architecture as a generative force in determining built form Using familiar twentieth century buildings as case studies the authors present these from a new perspective based on their functional design concepts Here Grabow and Spreckelmeyer expand the definition of human use to that of an art form by re evaluating these buildings from an aesthetic and ecological view of function Each building is described from the point of view of a major functional concept or idea of human use which then spreads out and influences the spatial organization built form and structure In doing so each building is presented as an exemplar that reaches beyond the pragmatic concerns of a narrow program and demonstrates how functional concepts can inspire great design evoke archetypal human experience and help us to understand how architecture embodies the deeper purposes and meanings of everyday life

Housing is an essential but complex product so complex that professionals involved in its production namely architects real estate developers and urban planners have difficulty agreeing on good housing outcomes Less than optimal solutions that have resulted from a too narrow focus on one discipline over others are familiar high design that is costly to build that makes little contribution to the public realm highly profitable but seemingly identical cookie cutter dwellings with no sense of place and well planned neighborhoods full of generically designed unmarketable product types Differing roles languages and criteria for success shape these perspectives which in turn influence attitudes about housing regulation Real estate developers for example prefer projects that can be built as of right or by right meaning that they can be approved quickly because they meet all current planning zoning and building code requirements Design focused projects heretofore by design by contrast often require time to challenge existing regulatory codes pursuing discretionary modifications meant to maximize design innovation and development potential Meanwhile urban planners work to establish and mediate the threshold between by right and by design processes by setting housing standards and determining appropriate housing policy But just what is the right line between by right and by design By Right By Design provides a historical perspective conceptual frameworks and practical strategies that cross and connect the diverse professions involved in housing production The heart of the book is a set of six cross disciplinary comparative case studies each examining a significant Los Angeles housing design precedent approved by variance and its associated development type approved as of right Each comparison tells a different story about the often hidden relationships among the three primary disciplines shaping the built environment some of which uphold and others of which transgress conventional disciplinary stereotypes

"Architecture, Design and Craft in Toronto 1900-1940 " Alla Myzelev,2017-07-05 Toronto the largest and one of the most multicultural cities in Canada boasts an equally interesting and diverse architectural heritage Architecture Design and Craft in Toronto 1900 1940 tells a story of the significant changes in domestic life in the first 40 years of the twentieth century Adopting a multidisciplinary approach to studies of residential spaces the author examines how questions of

modernity and modern living influenced not only architectural designs but also interior furnishings modes of transportation and ways to spend leisure time The book discusses several case studies some of which are known both locally and internationally for example Casa Loma while others such as Guild of All Arts or Sherwood have been virtually unstudied by historians of visual culture The overall goal of the book is to put Toronto on the map of scholars of urban design and architecture and to uncover previously unknown histories of design craft and domesticity in Toronto This study will be of interest not only to the academic community namely architects designers craftspeople and scholars of these disciplines along with social historians but also the general public interested in local history and or visual culture Neighborhoods National Endowment for the Arts,1977 **Invisible Gardens** Peter Walker,Melanie Louise Simo,1996 Invisible Gardens is a composite history of the individuals and firms that defined the field of landscape architecture in America from 1925 to 1975 a period that spawned a significant body of work combining social ideas of enduring value with landscapes and gardens that forged a modern aesthetic The major protagonists include Thomas Church Roberto Burle Marx Isamu Noguchi Luis Barragan Daniel Urban Kiley Stanley White Hideo Sasaki Ian McHarg Lawrence Halprin and Garrett Eckbo They were the pioneers of a new profession in America the first to offer alternatives to the historic landscape and the park tradition as well as to the suburban sprawl and other unplanned developments of twentieth century cities and institutions The work is described against the backdrop of the Great Depression the Second World War the postwar recovery American corporate expansion and the environmental revolution The authors look at unbuilt schemes as well as actual gardens ranging from tiny backyards and play spaces to urban plazas and corporate villas Some of the projects discussed already occupy a canonical position in modern landscape architecture others deserve a similar place but are less well known The result is a record of landscape architecture s cultural contribution as distinctly different in history intent and procedure from its sister fields of architecture and planning during the years when it was acquiring professional status and struggling to define a modernist aesthetic out of the startling changes in postwar America *Gids voor moderne architectuur in Nederland* Paul Groenendijk,Piet Vollaard,Piet Rook,1998 Reis gids voor moderne Nederlandse architectuur waarin ruim 700 objecten worden afgebeeld en beknopt beschreven Precedented Environmental Futures Colin Porteous,2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment
