Environmental Technology in the Oil Industry Stefan T. Orszulik, 2007-12-05 FIGURE 1 1 BP group annual total air emissions by pollutant 1999 2004 See Color Plates FIGURE 1 2 BP group annual total air emissions by business 1999 2004 See Color Plates evaporate In addition gas can be released from operations through controlled process vents for safety protection Further safety devices such as flares are used to burn excess hydrocarbons in the industry but can allow a small proportion of hydrocarbon into the atmosphere without being burnt Industry contains and controls these emissions wherever possible to minimize any loss of hydrocarbon Hydrocarbon vapours often described as volatile organic compounds or VOCs are potentially harmful air pollutants which can result in local health impacts as well as local or regional contributions to the formation of low level ozone which in turn may also impact human health Controlling hydrocarbon loss helps prevent impact on air quality and is also economically

beneficial 4 A Ahnell and H O Leary In 2004 BP emitted 245 kilo tonnes of non methane hydrocarbons to air a decrease of 24 kilo tonnes 9% compared with 2003 The largest proportion of these emissions came from the exploration and production businesses 44% followed by refining and marketing 35% Combining methane and non methane hydrocarbon totals provides a better idea of where most of the hydrocarbon emissions come from within the industry sectors In BP's case the exploration and production activities account for 67% of the total volume of such hydrocarbons emitted to air in 2004

Bioremediation of Petroleum and Petroleum Products James G. Speight, Karuna K. Arjoon, 2012-11-07 With petroleum related spills explosions and health issues in the headlines almost every day the issue of remediation of petroleum and petroleum products is taking on increasing importance for the survival of our environment our planet and our future This book is the first of its kind to explore this difficult issue from an engineering and scientific point of view and offer solutions and reasonable courses of action This book will guide the reader through the various methods that are used for the bioremediation of petroleum and petroleum products The text is easy to read and includes many up to date and topical references This book introduces the reader to the science and technology of biodegradation a key process in the bioremediation of petroleum and petroleum based contaminants at spill sites The contaminants of concern in the molecularly variable petroleum and petroleum products can be degraded under appropriate conditions But the success of the process depends on the ability to determine the necessary conditions and establish them in the contaminated environment Although the prime focus of the book is to determine the mechanism extent and efficiency of biodegradation it is necessary to know the composition of the original petroleum or petroleum product The laws of science dictate what can or cannot be done with petroleum and petroleum products to ensure that biodegradation hence bioremediation processes are effective The science of the composition of petroleum and petroleum products is at the core of understanding the chemistry of biodegradation and bioremediation processes Hence inclusion of petroleum analyses and properties along with petroleum product analyses and properties is a necessary part of this text *Bioremediation of Petroleum and Petroleum Products* Summarizes the pros and cons of remediation of petroleum and petroleum based products from an environmental perspective Gives examples of unethical behavior and how they should be corrected Offers arguments and elucidates engineering considerations on all sides of these difficult environmental and economic issues
