

Physiology Muir Exam 1

Most mammals 70-80 ml/kg blood volume

Lecture 19 - 113-115

- List the chambers and valves involved in cardiovascular circuitry
 - Each side has two chambers - atrium and ventricle connected by the AV (atrioventricular) valves
- List and describe the steps involved in a complete circuit through the cardiovascular system
 - Oxygenated blood fills the left atrium - oxygenated in the lungs
 - Flows from the left atrium to the left ventricle through the mitral (AV) valve
 - Blood is ejected from the left ventricle into the aorta
 - Blood leaves the ventricle through the aortic valve
 - When the left ventricle contracts, the pressure inside increases and opens the aortic valve, and ejects blood forcefully into the aorta
 - Blood then flows through the arterial circulation
 - Cardiac output is distributed among various organs
 - Distributed among the organ system via parallel arteries
 - Parallel arrangement - the total systemic blood flow must equal the cardiac output
 - Blood flow from the organs is collected in the veins
 - Blood leaving the organs contains waste products from metabolism (CO_2)
 - Veins increase in size till it enters the heart in the vena cava
 - Venous return to the right atrium
 - Pressure in the vena cava is greater than in the right atrium, so the atrium fills
 - Steady state the venous return equals the cardiac output
 - Mixed venous blood fills the right ventricle
 - from atrium to ventricle, in the right heart = AV (tricuspid valve)
 - Blood is ejected from the right ventricle into the pulmonary artery
 - Ejected through the pulmonic valve (semilunar) into pulmonary arteries
 - Cardiac output from right ventricle is same as cardiac output from left ventricle
 - In the capillary beds of the lungs, O_2 is added to the blood from alveolar gas and CO_2 is removed
 - Blood flow from the lungs is returned to the heart via the pulmonary vein
 - Oxygenated blood is returned to the left atrium via the pulmonary vein to begin a new cycle

Lecture 20 - 115-127

- List the special characteristics of different blood vessel types and explain why these characteristics are important
 - Arteries - Deliver oxygenated blood to the organs
 - Thick-walled, with elastic tissue, smooth muscle, and connective tissue
 - Important because the blood is expelled forcefully to reach all areas of the body, so needs to be able to stretch
 - Stressed volume - volume of blood contained in the arteries
 - Arterioles - smallest branches of the arteries
 - walls have extensive smooth muscle that is tonically active
 - Site of highest resistance
 - alpha-Adrenergic receptors - when activated contraction or constriction of vascular smooth muscle

The Dragon and Mrs. Muir Connie Suttle, 2021-06-30 It was on every news station in the country and on many foreign news outlets as well. Attack at Wedding Leaves at Least Fourteen Dead, Many More Injured, the headlines proclaimed. The wedding was an outdoor affair on a beach with the Gulf of Mexico in the background. In all, seventy-two were injured, and the body count rose to seventeen. Local hospitals were filled with bleeding attendees, and at one point the bride, her bloodied white wedding dress cut away and spilling onto the emergency room floor, went into cardiac arrest. Her groom died at the scene. In the room next door, an elderly wedding guest also suffered cardiac arrest, not from a bullet wound but from shock combined with advanced age and a weak heart. Both souls walked out of their respective rooms. One wanted to live. One did not. Philomena Muir became a widow on her wedding day. Three years later, she found herself bumping into the strangest man she'd ever met, except he wasn't a man. More specifically, he wasn't human. That brief meeting became the catalyst for a brewing war pitting one human witch against the might of a supernatural race. The cards are stacked, and Philomena needs a winning hand.

John Muir Mary Colwell, 2014-11-21 John Muir is regarded as the father of America's national parks and is a towering figure in the history of that country's involvement with ecology. Born into a harsh home in Dunbar, Scotland, he would often escape to revel in the birds and wildlife of the area. When his father suddenly uprooted the family and moved to the United States, the oppression he associated with his childhood continued, and so did his involvement with the natural world. Despite the difficulty of his formative years, Muir grew up to be a man of great joy, first an inventor and then an explorer, he found his haven in the mountains of Sierra Nevada. He was a fascinating character, on the one hand a recluse who sought solitude and on the other a passionate activist determined to save the places he loved. A strong believer in both God and the essential goodness of humanity, he was the founder and first president of the Sierra Club. This wonderful memoir pays tribute to a giant of ecology and is essential reading for lovers of natural history.
