Multi-Agent Systems and Agent-Based Simulation Jaime S. Sichman, Rosaria Conte, Nigel Gilbert, 2005-07-12 Fifteen papers were presented at the first workshop on Multi Agent Systems and Agent Based Simulation held as part of the Agents World conference in Paris July 4 6 1998 The workshop was designed to bring together two developing communities the multi agent systems researchers who were the core participants at Agents World and social scientists interested in using MAS as a research tool Most of the social sciences were represented with contributions touching on sociology management science economics psychology environmental science ecology and linguistics The workshop was organised in association with SimSoc an informal group of social scientists who have arranged an irregular series of influential workshops on using simulation in the social sciences beginning in 1992 While the papers were quite heterogeneous in substantive domain and in their disciplinary origins there were several themes which recurred during the workshop One of these was considered in more depth in a round table discussion led by Jim Doran at the end of the workshop on Representing cognition for social simulation which addressed the issue of whether and how cognition should be modelled Quite divergent views were expressed with some participants denying that individual cognition needed to be modelled at all and others arguing that cognition must be at the centre of social simulation *Process-Oriented Analysis and Validation of Multi-Agent-Based Simulations* Nicolas

Denz, 2014-12-31 In multi agent based simulation MABS the behavior of individual actors is modeled in detail The analysis and validation of these models is rated as difficult and requires support by innovative techniques and tools Problems include model complexity the amount and often qualitative representation of simulation results and the typical dichotomy between microscopic modeling and macroscopic observation perspectives In recent years data mining has been increasingly applied as a support technique in this context A particularly promising approach is found in the field of process mining Due to its rooting in business process analysis process mining shares several process and organization oriented analysis perspectives and use cases with agent based modeling This thesis proposes a conceptual framework for the systematic application of process mining to the analysis and validation of MABS As a foundation agent oriented analysis perspectives and simulation specific use cases are identified and complemented with methods techniques and results from the literature A partial formalization of perspectives and use cases is sketched by utilizing concepts from process modeling and software engineering Beyond the conceptual work process mining is applied in two case studies related to different modeling and simulation approaches **International Conference on Multi Agent Systems** IEEE Computer Society, 1998 This volume

included in the MABS 2000 workshop were selected either because they explore how agent interaction can be used to build multi agent systems or they offer examples of problem oriented rather than technique oriented systems No paper was selected if it specified a model or an issue to make it a previously chosen technique All of the papers in the volume have been reviewed and in many cases revised since the workshop Two papers by Edmonds and by Hales as well as the editorial introduction have been added to those accepted for the workshop As editors and workshop organisers we are very grateful to the participants who engaged enthusiastically in the discussions about both individual papers and the issues facing the MABS community Issues raised and positions taken in those discussions are reported in the editorial introduction We are also grateful to the authors for their punctuality and the grace with which they received and responded to editorial comments and requests Klaus Fischer the ICMAS 2000 workshops chair was exceptionally patient and diplomatic in reconciling our demands with the resources available
