Cell-Mediated Effects of Immunoglobulins Wolf H. Fridman, 2012-12-06 Interaction of antigen antibody complexes with cells via specific immunoglobulin Fc receptors FcR triggers major immunological reactions such as efficient uptake of antigen phagocytosis of microorganisms cytotoxicity towards tumor or virus infected cells mast cell degranulation and inflammation etc This book reviews the FcR for the different immunoglobulin isotypes focusing on the structural bases of their biological functions and on the regulation of their expression in physiology and pathology Antibody Drug Discovery Clive R. Wood, 2012 Monoclonal antibodies have become important treatments for cancer inflammation and a wide range of other diseases representing an increasing share of the most successful pharmaceutical markets The technologies to discover these drugs have been developed by select centers of excellence in industry and academia and are continually being fine tuned in the race to identify the best antibody based drug candidates and accelerate their paths to patients The objective of this volume is to provide a series of guides to those evaluating and preparing to enter particular areas within the field and to offer specialized perspectives to established researchers The chapters set into context the significance of key developments and important considerations for selecting different approaches such as antibody humanization isotype selection lead candidate selection criteria and protein production All contributors to this work are experts in their fields and many have played pivotal roles in the creation of these technologies Glycobiophysics Yoshiki Yamaguchi, Koichi Kato, 2018-11-27 This book presents state of the art biophysical approaches to issues in glycobiology that have cutting edge applications Despite the importance of glycosylation the complexity heterogeneity and flexibility of the glycans have inhibited their study Each

chapter in this book explains very recent significant advances in biophysical approaches through the use of techniques such as NMR spectroscopy mass spectrometry single molecule imaging X ray crystallography high speed atomic force microscopy and computational simulation and their integrative application Concrete examples are provided of the value of these techniques in addressing key problems in the field In addition significant functional glycobiological issues are considered For example glycolipids can form dynamic clusters on cell membranes and provide platforms for molecules involved in cell recognition and subsequent signal transduction The detailed delineation of these molecular systems is discussed revealing their structural complexity and ability to assemble transiently This timely book will be of value for graduate students and postdocs interested in frontier topics in glycoscience and also for senior bio researchers in academic and industrial fields

Acta Biologica Hungarica, 1988 Publishes original papers on experimental biology Pharmacology of Immunotherapeutic Drugs Clinton B. Mathias, Jeremy P. McAleer, Doreen E. Szollosi, 2019-10-18 Medicine has entered a golden age in which therapeutic agents are becoming widely available due to advances in basic science and technology As such many drugs have been developed that target inflammatory processes and or the immune system This book is intended for health professionals examining the modulation of inflammation by immunotherapeutic drugs. The immune system fills the primordial role of host defense and resistance to infections with pathogenic microorganisms Several hematopoietic derived cells constituting the innate and adaptive immune systems cooperate to provide barriers for microbial colonization and or promote pathogen destruction within the host Conversely many immune cells are also involved in the pathogenesis and propagation of chronic inflammatory diseases The beginning of this book details various components of the immune system including the cell types lymphoid tissues soluble cytokines and surface molecules that are essential for host defense Breakdowns in immune tolerance or dysregulated immune responses to antigens derived from self tissues or innocuous sources can lead to the development of autoimmunity or chronic inflammatory diseases Pathophysiologic roles for the immune system are detailed in corresponding chapters on autoimmunity epithelial surfaces lungs skin intestine and transplantation with special emphasis placed on immunotherapeutic drug targets The last section of the book focuses on treatments that stimulate our immune system to specifically target and fight infectious diseases and cancer In each chapter the medications used to treat various diseases conditions in terms of their mechanism of action and other pharmacologic properties are detailed Chapters begin with a table showing drug names and classifications The importance of basic science and clinical trials cannot be understated in the context of drug development As such the discovery of certain medications that had a lasting impact in medicine and pharmacy are highlighted in chapter subsections named Bench to Bedside Several clinical applications of immunotherapeutic drugs are described within end of chapter case studies including practice questions The Pharmacology of Immunotherapeutic Drugs is a reference for immunologists and clinicians medical doctors pharmacists nurses examining the modulation of inflammatory processes by a variety of medications targeting the cells and

mediators of our immune system Genetics, Structure and Function of Blood Cells S. R. Hollán, G. Gárdos, B. Sarkadi, 2013-10-22 Genetics Structure and Function of Blood Cells contains the proceedings of the symposia of the 28th International Congress of Physiology held in Budapest between 13 and 19 of July 1980 Organized into six parts this book begins with a discussion on the genetic regulation of hemoglobin synthesis Parts II and III describe the immunoglobulin receptors and their effectors and antenatal development of human blood cells Subsequent parts talk about regulation of differentiation of hemoglobin structure and function and the role of calcium in red cell membrane transport processes The last part elucidates the structure and function of blood cell membranes Molecular Interactions in Bioseparations That T. Ngo, 2013-11-11 Rapid advances in molecular biology have accelerated the production of a great number of protein based therapeutic agents The major cost in producing these proteins appears to be associated with their purification from the complex mixture of the crude extract A major challenge to the protein biochemist and the biochemical engineer is the development of rapid efficient and cost effective purification systems. This volume presents state of the art reviews of current methods used in the purification of biological macromolecules that are based on molecular interactions Thus the major emphasis is placed on affinity related techniques Part I provides a general introduction to affinity chromatography and includes a chapter describing an interesting new technique called slalom chromatography for DNA fractionations Affinity chromatography using molecules of biological origin as the affinity ligand is covered in Part II Part III describes the use of a special class of biomolecules antibodies as affinity ligands Affinity chromatography with biomimetic ligands is discussed in Part IV Newer concepts and their applications in bioseparation are presented in Part V Part VI covers affinity related techniques such as affinity based extracorporeal shunts affinity electrophoresis affinity precipitation and affinity extraction I would like to express my sincere thanks to all the authors who are recognized experts in their respective fields for their cooperation and contributions I thank the editorial staff of Plenum Press for their professionalism and Mary Phillips Born Senior Editor for her encouragement The support of my family Ping and Peilin made it possible to complete editing this book That T Adenoviral Vectors for Gene Therapy David T. Curiel, 2016-03-10 Adenoviral Vectors for Gene Therapy Second Edition provides detailed comprehensive coverage of the gene delivery vehicles that are based on the adenovirus that is emerging as an important tool in gene therapy These exciting new therapeutic agents have great potential for the treatment of disease making gene therapy a fast growing field for research This book presents topics ranging from the basic biology of adenoviruses through the construction and purification of adenoviral vectors cutting edge vectorology and the use of adenoviral vectors in preclinical animal models with final consideration of the regulatory issues surrounding human clinical gene therapy trials This broad scope of information provides a solid overview of the field allowing the reader to gain a complete understanding of the development and use of adenoviral vectors Provides complete coverage of the basic biology of adenoviruses as well as their construction propagation and purification of adenoviral vectors Introduces common strategies

for the development of adenoviral vectors along with cutting edge methods for their improvement Demonstrates noninvasive imaging of adenovirus mediated gene transfer Discusses utility of adenoviral vectors in animal disease models Considers Federal Drug Administration regulations for human clinical trials *Progress in Immunology Vol. VIII* M. Benczur, Anna Erdei, A. Falus, G. Füst, G.A. Medgyesi, G.G.
