Multimedia Modeling (Mmm'97): Modeling Multimedia Information And Systems Hung Keng Pung,Tat Seng Chua,1997-11-12 The world is inherently complex and multimedia in nature The development of computer systems to tackle real world problems is an extremely difficult task As computers capable of manipulating multimedia information are becoming more powerful and commonplace larger and more complex systems are increasingly being built To fully comprehend the complexity of such undertakings proper modeling of multimedia information and systems must be carried out A model provides a high level abstraction of the system in which the implementation is based upon It permits the desirable properties of the system to be extracted and analyzed and also provides a uniform framework for integration between different systems and for interactions between the system and human users This volume is devoted to the discussion of effective modeling of multimedia information and systems for a wide range of applications It aims to provide common modeling frameworks for the integration of the diverse subjects in the field of multimedia information **MultiMedia Modeling** Yong Man Ro,Wen-Huang Cheng,Junmo Kim,Wei-Ta Chu,Peng Cui,Jung-Woo Choi,Min-Chun Hu,Wesley De Neve,2019-12-27 The two volume set LNCS 11961 and 11962 constitutes the thoroughly refereed proceedings of the 25th International Conference on MultiMedia Modeling MMM 2020 held in Daejeon South Korea in January 2020 Of the 171 submitted full research papers 40 papers were selected for oral presentation and 46 for poster presentation 28 special session papers were selected for oral presentation and 8 for poster presentation in addition 9 demonstration papers and 6 papers for the Video Browser Showdown 2020 were accepted The papers of LNCS 11961 are organized in the following topical sections audio and signal processing coding and HVS color processing and art detection and classification face image processing learning and knowledge representation video processing poster papers the papers of LNCS 11962 are organized in the following topical sections poster papers AI powered 3D vision multimedia analytics perspectives tools and applications multimedia datasets for repeatable experimentation multi modal affective computing of large scale multimedia data multimedia and multimodal analytics in the medical domain and pervasive environments intelligent multimedia security demo papers and VBS papers *Multimedia Modeling (Mmm '96): Towards The Information Superhighway* P Senac,Jean Pierre Courtiat,Michel Diaz,1996-09-30 The purpose of the MMM series of conferences is to bring together activities related to all aspects of multimedia modeling in its broader sense from multimedia networking to virtual worlds Its ultimate goal is to provide a better understanding of the basic paradigms and to establish conceptual links between them for better design of future advanced multimedia systems The proceedings of MMM 96 present the state of the art in the representation processing interaction integration and retrieval of multimedia information **MultiMedia Modeling** Ichiro Ide,Ioannis Kompatsiaris,Changsheng Xu,Keiji Yanai,Wei-Ta Chu,Naoko Nitta,Michael Riegler,Toshihiko Yamasaki,2025-01-01 This five volume set LNCS 15520 15524 constitutes the proceedings of the 31st International Conference on Multimedia Modeling

Cyberworlds Toshiyasu L. Kunii, Annie Luciani, 2012-12-06 The worlds synthesized in the cyberspaces of networked computers are the theme of Cyberworlds Cyberspaces have come into prominence with the development of the Internet and are expected to expand drastically with the emergence of national and international information systems The purpose is to discover the architecture and design of cy of the book Cyberworlds berworlds by synthesizing worlds in cyberspaces The underlying philosophy is crucial to the success of the architecture and an initial effort is made to delineate it at the beginning of the book The book s topics are selected to clarify the issues of the philosophy architecture and design of cyberworlds through a wide variety of case studies The approach presented in the book is thus characterized as synthetic rather than analytic There already are numbers of books with observations and analyses of cyberworlds They warn of the danger of widespread crimes and accidents in the cyberworlds for instance Without a philosophy and methodologies of how

to architecturally design and synthesize the cyber worlds the worlds in cyberspaces tend to be arbitrarily extended disordered and in extreme cases criminal This book is intended to benefit readers by providing them with a possible direction to take in deciding how to synthesize worlds in cyberspaces Creating new worlds in new spaces with almost unlimited dimension and scale is an immense challenge In principle anyone at any moment can participate in the creation The book serves as a creator's reference and also as a design guidebook

Visual and Multimedia Information Management Xiaofang Zhou, Pearl Pu, 2013-11-11 Current research in Visual Database Systems can be characterized by scalability multi modality of interaction and higher semantic levels of data Visual interfaces that allow users to interact with large databases must scale to

web and distributed applications Interaction with databases must employ multiple and more diversified interaction modalities such as speech and gesture in addition to visual exploitation Finally the basic elements managed in modern databases are rapidly evolving from text images sound and video to compositions and now annotations of these media thus incorporating ever higher levels and different facets of semantics In addition to visual interfaces and multimedia databases Visual and Multimedia Information Management includes research in the following areas Speech and aural interfaces to databases Visualization of web applications and database structure Annotation and retrieval of image databases Visual querying in geographical information systems Video databases and Virtual environment and modeling of complex shapes Visual and Multimedia Information Management comprises the proceedings of the sixth International Conference on Visual Database Systems which was sponsored by the International Federation for Information Processing IFIP and held in Brisbane Australia in May 2002 This volume will be essential for researchers in the field of management of visual and multimedia information as well as for industrial practitioners concerned with building IT products for managing visual and multimedia information

Virtual Worlds Jean-Claude Heudin, 2003-05-20 1 Introduction Imagine a virtual world with digital creatures that looks like real life sounds like real life and even feels like real life Imagine a virtual world not only with nice three dimensional graphics and animations but also with realistic physical laws and forces This virtual world could be familiar reproducing some parts of our reality or unfamiliar with strange physical laws and artificial life forms As a researcher interested in the sciences of complexity the idea of a conference about virtual worlds emerged from frustration In the last few years there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality The emergence of industry standards such as VRML 1 is an illustration of this growing interest At the same time the field of Artificial Life has addressed and modeled complex phenomena such as self organization reproduction development and evolution of artificial life like systems 2 One of the most popular works in this field has been Tierra designed by Tom Ray an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the energy resource and memory is the material resource 3 Memory is organized into informational patterns that exploit CPU time for self replication Mutation generates new forms and evolution proceeds by natural selection as different creatures compete for CPU time and memory space
