Multinodal Urban Structures A Comparativ:

Public Space Svetlana Hristova, Mariusz Czepczyński, 2017-09-14 Public Space Between Reimagination and Occupation examines contemporary public space as a result of intense social production reflecting contradictory trends the long lasting effects of the global crisis manifested in supranational trade offs between political influence state power and private ownership and the appearance of global counter actors enabled by the expansion of digital communication and networking technologies and rooted into new participatory cultures easily growing into mobile cultures of protest The highlighted cases from Europe Asia Africa and North America reveal the roots of the pre crisis processes of redistribution of capital and power as an aspect of the transition from the consumerist past into the post consumerist present by tracing the slow growth of social discontent that has led only a few years later to the mobilization of a new kind of self conscious globally acting class This edited volume brings together a broad range of interdisciplinary discussions and approaches providing sociologists cultural geographers and urban planning academics and students with an opportunity to explore the various social cultural economic and political factors leading to reappropriation and reimagination of the urban commons in the cities within which we live

Mobility Patterns and Urban Structure Paulo Pinho, Cecília Silva, 2016-03-03 Despite extensive efforts to understand the overall effect of urban structure on the current patterns of urban mobility we are still far from a consensual perspective on this complex matter To help build agreement on the factors influencing travel behaviour this book discusses the influence of alternative urban structures on sustainable mobility Bringing together two existing and complementary methods to study the relationship between urban structure and mobility the authors compare two case studies with distinct urban structures and travel behaviour Copenhagen and Oporto Of particular concern is the influence of urban structure factors namely land use and transport system factors and motivational factors related to the social economic and cultural characteristics of the individual traveller The research presented in this book highlights the relevance of centrality in travel behaviour and in more sustainable travel choices Different operational forms of the centrality concept are revealed as important it is shown that more sustainable travel can be influenced by several urban structure factors and that no particular combination is required as long as a certain level of centrality is provided Finally the book concludes that urban structure can on the one hand constrain and on the other hand influence travel choice

Comparative Structure and Evolution of Cerebral Cortex Edward G. Jones, Alan Peters, 1990-10-31 The cerebral cortex especially that part customarily designated neocortex is one of the hallmarks of mammalian evolution and reaches its greatest size relatively speaking and its widest structural diversity in the human brain The evolution of this structure as remarkable for the huge numbers of neurons that it contains as for the range of behaviors that it controls has been of abiding interest to many generations of neuroscientists Yet few theories of cortical evolution have been proposed and none has stood the test of time In particular no theory has been successful in bridging the evolutionary gap that appears to exist between the pallium of nonmammalian vertebrates and the

neocortex of mammals. Undoubtedly this stems in large part from the rapid divergence of non-mammalian and mammalian forms and the lack of contemporary species whose telencephalic wall can be seen as having transitional characteristics. The monotreme cortex for example is unquestionably mammalian in organization and that of no living reptile comes close to resembling it. Yet anatomists such as Ramon y Cajal on examining the finer details of cortical structure were struck by the similarities in neuronal form particularly of the pyramidal cells and their predisposition to laminar alignment shared by representatives of all vertebrate classes.

Machine Learning and the City Silvio Carta, 2022-05-17 *Machine Learning and the City* Explore the applications of machine learning and artificial intelligence to the built environment. *Machine Learning and the City: Applications in Architecture and Urban Design* delivers a robust exploration of machine learning (ML) and artificial intelligence (AI) in the context of the built environment. Relevant contributions from leading scholars in their respective fields describe the ideas and techniques that underpin ML and AI, how to begin using ML and AI in urban design, and the likely impact of ML and AI on the future of city design and planning. Each section couples theoretical and technical chapters, authoritative references, and concrete examples and projects that illustrate the efficacy and power of machine learning in urban design. The book also includes an introduction to the probabilistic logic that underpins machine learning. Comprehensive explorations of the applications of machine learning and artificial intelligence to urban environments. Practical discussions of the consequences of applied machine learning and the future of urban design. Perfect for designers approaching machine learning and AI for the first time. *Machine Learning and the City: Applications in Architecture and Urban Design* will also earn a place in the libraries of urban planners and engineers involved in urban design.

National Transportation Strategic Planning Study United States. Department of Transportation, 1990. Provided is an overview of the Nation's transportation system which identifies future investments required to maintain and develop its infrastructure. The contents of this study were used in support of the National Transportation Policy Statement issued by the Department of Transportation during March 1990. It is organized around a framework in which transportation is viewed as an integral part of our socioeconomic system. The future development of transportation will be influenced by the same factors affecting the rest of the system, namely demographic changes, the future course of the economy, the energy supply, and preservation of the environment.

National Transportation Strategic Planning Study, 1990 Urban Mobility Research in India M. Manoj, Debashish Roy, 2024-12-14. This book presents select proceedings of the research symposium held as part of the 16th Urban Mobility India Conference and Expo 2023 (UMI 2023). The book examines the broad perspectives of integrated and resilient transport applicable to urban transportation. It essentially provides an update of the ongoing research in urban transport-related themes such as transport resilience, sustainable transport, public transport, and vulnerable road users, land use, and urban transport freight and emerging mobility options. The book is a valuable reference for students, researchers, and professionals who study the broad areas of urban transport in India. It is also helpful to urban and transport planners and

Applied Simulation and Optimization 2 Miguel Mujica Mota, Idalia Flores De La Mota, 2017-05-18 Building on the author's earlier Applied Simulation and Optimization this book presents novel methods for solving problems in industry based on hybrid simulation optimization approaches that combine the advantages of both paradigms The book serves as a comprehensive guide to tackling scheduling routing problems resource allocations and other issues in industrial environments the service industry production processes or supply chains and aviation Logistics manufacturing and operational problems can either be modelled using optimization techniques or approaches based on simulation methodologies Optimization techniques have the advantage of performing efficiently when the problems are properly defined but they are often developed through rigid representations that do not include or accurately represent the stochasticity inherent in real systems Furthermore important information is lost during the abstraction process to fit each problem into the optimization technique On the other hand simulation approaches possess high description levels but the optimization is generally performed through sampling of all the

possible configurations of the system The methods explored in this book are of use to researchers and practising engineers in fields ranging from supply chains to the aviation industry Handbook of Amygdala Structure and Function Janice H. Urban,J. Amiel Rosenkranz,2020-03-31 Handbook of Amygdala Structure and Function Volume 26 provides an updated overview on the functional neuroanatomy of amygdala nuclei with an emphasis on interconnections basolateral central amygdala medial amygdala and their integration into related networks circuits prefrontal cortex bed nucleus nucleus accumbens The design of this volume builds upon the foundations of functional neural circuits and the corresponding cellular electrophysiology important for the homeostatic control of amygdala function This volume contains a dedicated section on the anatomical organization of the amygdala nuclei emphasizing the role of neurotransmitters and neuropeptides that integrate signals and regulate behavior Additional chapters discuss cellular physiology plasticity and the integration of electrical signals that contribute to neural activity The final section of the book connects the role of amygdala dysfunction and the development of disorders in human health and disease Emphasizes a comparative and multidisciplinary approach on the topic of the amygdala Discusses in detail the role of amygdala dysfunction and the development of disorders in human health and disease Examines the current state of research in cellular physiology plasticity and the integration of electrical signals Includes a dedicated section on neuropeptides neurotransmitters and cannabinoids that links to behavior control

Transforming Urban Transport Nicholas Low,2012-12-12 Transforming Urban Transport confronts head on the dilemma faced by a world wedded to mobility the danger of continuing along the fossil fuelled path and the real paucity of viable technological alternatives which can be deployed in time To respond to the dilemma the ideal of urban transport must be changed from auto based mobility to systems of sustainable transport in which public transport and non motorised transport work together to reduce climate change pressures enhance urban quality and preserve life and health The book challenges the commonly held view that a combination of urbanity and higher residential density expressed in compact cities expected to have greater public transport use will resolve urban transport environment problems instead showing that transport systems can be changed to meet the environmental imperatives without the massive spatial change implied But the problem of change of urban transport is profoundly institutional and cultural Changes in urban mobility and transport require local institutional policy action To support such action the book explores new methods of governance of transport in dispersed and concentrated cities new techniques for assessing transport need ways of improving childhood mobility guidelines for political mobilization and norms of knowledge sharing Drawing together leading scholars from different disciplines in Australia Japan and China this book provides a unique fusion of Asian and Australasian perspectives and engages with the coming needs of transport planning practitioners in both high density and dispersed cities **U.S. and International Approaches to Performance Measurement for Transportation Systems** ,2008 These proceedings contain a summary of the Transportation Research Board conference on U S and international approaches to performance

Planning for Public Transport Accessibility Carey Curtis,Jan Scheurer,2016-05-05 Bringing together a comparative analysis of the accessibility by public transport of 23 cities spanning four continents this book provides a hands on introduction to the evolution rationale and effectiveness of a new generation of accessibility planning tools that have emerged since the mid 2000s The Spatial Network Analysis for Multimodal Urban Transport Systems SNAMUTS tool is used as a practical example to demonstrate how city planners can find answers as they seek to improve public transport accessibility Uniquely among the new generation of accessibility tools SNAMUTS has been designed for multi city comparisons A range of indicators are employed in each city including the effectiveness of the public transport network the relationship between the transport network and land use activity who gets access within the city and how resilient the city will be The cities selected enable a comparison between cities by old world new world public transport modes governance approach urban development constraints The book is arranged along six themes that address the different planning challenges cities confront Richly illustrated with maps and diagrams this volume acts as a comprehensive sourcebook of

accessibility indicators and a snapshot of current policy making around the world in the realm of strategic planning for land use transport integration and the growth of public transport It provides a deeper understanding of the complexity opportunities and challenges of twenty first century accessibility planning Languageing Class: Reflecting on the Linguistic Articulations of Structural Inequalities Claudia Ortu, Francesco Bachis, 2023-04-18 This volume explores the issue of social class from the point of view of its linguistic articulations Indeed as Machin and Richardson 2008 stated discourses may be variously approached as often simultaneously reflecting class structures as a site of class inequalities as expressive of class identities or class consciousness and or as a constituent part of more performative class action Some of the contributions that make up the volume were presented at a conference held at Cagliari University Italy in 2017 and responded to the call for analyses on the role of language in reflecting maintaining enacting and inculcating ideas on social class in literary and non literary texts and discourses in any cultural or linguistic setting This volume aspires to encourage scholars in disciplines and academic fields that have shied away from reflections on structural inequalities in favor of studies on ethnic gender and cultural identities in the last decades to take back on board the concept of social class and to engage with it in a novel way The variety of approaches ranging from the more traditional sociolinguistic one anthropology to literary and discourse studies and cultural settings with case studies coming from 3 continents represented in the chapters show that social class is a productive and illuminating concept for trying to re make sense of social reproduction and change
