 areas of research and science policy that are of concern to scientists in the Beltsville Area as well as to the general scientific
 community Each symposium in the series is structured to provide a realistic appraisal of current findings research progress
 and relevant policy issues within the constraints established by the organizing committee Thus the presentations and dis-
 cussions that have marked these symposia have had a strong appeal to the broad community of scientists Knowledge of the
 diversity of living organisms is still quite limited Since the time of Linnaeus about 17 million species have been described
 The actual number has been estimated between 50 million Many species land races and strains are vanishing Clearly the
 world's scientific institutions are inadequately equipped to attain sufficient knowledge of a significant fraction of the diverse

living forms Also efforts in the collection and preservation of germplasm of plants and animals urgently need to be strengthened These matters are critically important to future generations This symposium addresses vital concerns of biotic diversity and germ plasm preservation from diverse perspectives Many of the parts provide concrete recommendations for action and they call attention to areas of research that must be pursued with intensity
