Multiple Bonds:

Multiple Bonds between Metal Atoms F. Albert Cotton, Carlos A. Murillo, Richard A. Walton, 2006-07-31 Since the second edition of this book there has been so much published in the field that two points seemed clear. One was a sense that a new up to date monograph was needed. The other was the reluctance of two or even three people to undertake the daunting task of covering all the ground. Our response was to call on others to help and thus to produce the present multiauthored volume. Each of the contributing authors was in a position to write authoritatively from hands on research experience. We are confident that this has led to a better book than the three of us would have produced. As always in a book where different chapters are written by different authors there is some variation in style and we chose not to try to smooth it all out. In every chapter the objective has been to be comprehensive if not encyclopedic. Putting it a little differently we and the other authors have aimed to mention all pertinent literature references although the amount of emphasis accorded each paper necessarily varies. Since the volume of literature to cover is now so large a few topics that might have been included or were in the second edition have been omitted or are covered only in limited detail.

Catalytic Hydroarylation of Carbon-Carbon Multiple Bonds Lutz Ackermann, T. Brent Gunnoe, Laurel Goj Habgood, 2018-02-20 Filling a gap in the literature this book comprehensively reviews catalytic C-H addition reactions of heteroaromatic hydrocarbons across carbon-carbon multiple bonds. In so doing it summarizes both the scope as well as the limitations of different catalyst systems and building blocks while highlighting their application to the synthesis of pharmaceuticals as well as commodity chemicals. Focusing on the latest developments the team of authors comprising leaders in the field covers such topics as the hydroarylation of olefins, alkyne hydroarylation in the presence of transition metal catalysts, reaction of alkynes with arylboronic acids and allene hydroarylation as well as the synthesis of functionalized arenes and heteroaromatics. A must have for synthetic chemists in academia and industry dealing with catalysis, organometallic chemistry, the synthesis of natural products, fine chemicals, pharmaceuticals, products of the chemical industry and organic materials.

Metal-Ligand Multiple Bonds William A. Nugent, James M. Mayer, 1988-11-14 The only comprehensive one volume text reference on metal-ligand multiple bonds. Stresses the unified nature of the field and includes handy new tabulations of data. The flow within each subtopic is oxygen to nitrogen to carbon. Coverage is up to date, virtually every subtopic leads to interesting questions for future research. Presents information otherwise scattered through hundreds of publications.

Multiple Bonds Between Metal Atoms Frank Albert Cotton, Richard A. Walton, 1993 Provides historical perspective as well as current data. Abundantly illustrated with figures redrawn from literature data. Covers all pertinent theory and physical chemistry. Catalytic and chemotherapeutic applications are included.
