Mizuno,M.B.H. Youdim,D.B. Calne,R. Horowski,W. Poewe,P. Riederer,2013-03-07 Neurodegeneration is one of the most important subjects of the investigation now and in the coming 21st century Alzheimer s disease is the leading cause of dementia in the elderly people and Parkinson s disease is one of the major neurologic disorders with the prevalence between 1 and 2 1 000 population in advanced countries Many others are suffering from intractable neurodegenerative disorders such as amyotrophic lateral sclerosis Huntington s disease or spinocerebellar degeneration No truly effective treatment is available for any of these neurodegenerative disorders except for Parkinson s disease even in Parkinson s disease still it is impossible to slow down the disease process with the currently available treatment It is urgently needed to develop new effective technique to halt or slow down the disease process in each of those disorders Recent advance in the molecular biological and molecular genetic technique has brought us great progress in the understanding of etiology and pathogenesis of these disorders but still it is not known how neurons are going to die in these disorders To explore the question mutual cooperation and exchange of ideas between basic scientists and clinical peoples are of utmost importance *Neural and Neuroendocrine Mechanisms in Host Defense and Autoimmunity* C. Rudick,Donald E. Goodkin,2012-12-06 Multiple sclerosis is one of the major current problems in neurological practice It remains incompletely understood yet is a common cause of chronic disability in developed Western societies Patients with the disease have difficulty understanding what has happened to them and become bewildered by the contrast between the evidently large body of knowledge concerning the clinical manifestations and course of the disease and the conflicting views they so often receive from different specialists as to the best current management of their disease As in so many disorders for which treatment is only partially effective at best alternative therapies abound Dr Rudick and Dr Goodkin have extensive experience in the day to day management of multiple sclerosis at the Mellen Center for Multiple Sclerosis Treatment and Research attached to the Cleveland Clinic In this book they have assembled a group of experts from several countries and have provided a comprehensive review of the results of different treatments of the disease Each treatment is considered in the light of its proposed scientific basis or mode of action and in relation to ethical and trial design issues This information deserves to be made widely available As the treatment of multiple sclerosis enters a new era as a result of the new understanding of the cellular mechanisms of demyelination and the molecular biology of the immune response this information about current treatments assumes additional importance The book is of interest to all physicians concerned with the management of patients with the disease     Multiple Sclerosis and Related Disorders Alexander Rae-Grant, MD,Alexander Rae-Grant,Robert Fox, MD,Francois Bethoux, MD,2013-06-18 Special populations societal and family issues and related disorders that are often mistaken for MS are also covered Dedicated chapters on neuromyelitis optica and acute disseminated encephalomyelitis incorporate newer diagnostic criteria Because comorbidities often make the management of MS related disability more complex the book addresses these comorbidities as part of a comprehensive management plan To enhance the clinical utility critical to know information and management pearls are boxed for quick reference and most chapters include lists of Key Points for clinicians and for patients and families Illustrations tables graphs assessment scales and up to date MRI imaging inform the text throughout The treatment chapters include specific recommendations where available and highlight areas of controversy     Biomedical Engineering Fundamentals Joseph D.
