Baker,2001      **Resources & Environment in Asia's Marine Sector** James B. Marsh,2018-12-18 This volume brings together a cross section of marine experts who provide a comprehensive exploration of the major facets of Asia's marine sector. It considers both the marine mineral and fish stocks in Asian waters. This extensive volume examines official statistics with an objective eye and provides an overview of fish stock with much focus on the access and management of tuna. It considers global economic issues concerning fishing rights, looks at joint ventures between nations and considers law enforcement efforts. The volume devotes a section to sea lanes and another to off shore mineral deposits. It also considers current and growing problems and possible solutions regarding pollution.

**Inter-organizational Information Systems in the Internet Age** Sean B. Eom,2005-01-01 Since the U.S. Department of Defense initiated the development of networked computers in 1969, Internet technologies have rapidly advanced and revolutionized the way we communicate and conduct business. The second wave of the technological revolution came with intranet technology in the mid 1990s. With the intranet, organizations have strengthened the powers and speed of data gathering and sharing, communication, collaboration, and decision making within a firewall-protected organizational boundary. The third wave of this technological evolution, extranets, began in the second half of the 1990s. Many believe that it is the key technology enabler that is triggering a revolution in the structure and operations of many organizations in the new Internet-driven global economy. In addition to maturing Internet technologies, several technology drivers as well as business drivers further pushed the emergence of new types of organizations: virtual corporations, virtual organizations, extended enterprises, and trans-enterprise systems.

**Latent Structure Analysis** Francesco Nicosia,2011-06-30      **Optimal Decisions under Uncertainty** J.K. Sengupta,2012-12-06 The theory of optimal decisions in a stochastic environment has seen many new developments in recent years. The implications of such theory for empirical and policy applications are several. This book attempts to analyze some of the important applied aspects of this theory and its recent developments. The stochastic environment is considered here in specific form: e.g. a linear program (LP) with parameters subject to a probabilistic mechanism; b) decision models with risk aversion; c) resource allocation in a team; and d) national economic planning. The book attempts to provide new research insights into several areas: e.g. a) mixed strategy solutions and econometric tests of hypotheses of LP models; b) the dual problems of efficient estimation and optimal regulation; c) input-output planning under imperfect competition; and d) linear programs viewed as constrained statistical games. Methods of optimal decision rules developed here for quadratic and linear decision problems are applicable in three broad areas: a) applied economic models in resource allocation, planning, and team decision; b) operations research models in management decisions involving portfolio analysis and stochastic programming; and c) systems science models in stochastic control and adaptive behavior. Some results reported here have been published in professional journals. Before and I would like to thank the following journals in particular: International Journal of Systems Science, Journal of Optimization Theory and Applications, and Journal of Mathematical Analysis and Applications.
