## THE FIXED STARS IN MUNDANE ASTROLOGY

Vivian E. Robson

From the book *The Fixed Stars and Constellations in Astrology* 1923

Very little is known as to the effect of the fixed stars in mundane astrology although there is no doubt that their influence is of supreme importance in this branch of the subject. In matters concerning the fate of nations and cities the movement of the planets is too rapid to cause radical changes. They do indeed effect the more ephemeral happenings, but for slow, world-wide changes and epoch-making events it is necessary to take note of influences that are correspondingly great, and we are driven to a consideration of the movement of stars as being the only influence known to us that is capable of producing effects of the necessary magnitude. Unfortunately circumstances are against any detailed examination of this nature owing to the imminence periods of time involved, and therefore our knowledge is of the smallest, but nevertheless one or two facts are on record and with an increased interest in astrology others will no doubt rapidly come to light. The growth of religions appears to be in some way connected with the passage of the vernal equinox through the zodiac of constellations. Thus its entry into the constellation Taurus is associated with the worship of Baal and the golden calf, and its passage into Aries with the worship of the ram. Christianity arose when the vernal equinox was nearing Pisces and it is significant that the symbol of a fish was that adopted by the followers of the new religion. A greater amount of detail may be obtained from a study of the decanate through which the vernal equinox is passing. The approximate period during which it remains in one sign is 2160 years, and it therefore requires about 720 years to pass through a single decanate, which it does in a retrograde direction. Unfortunately the exact position of the vernal equinox in the constellations is not known with any accuracy, but there seems to be no doubt that the first point of Aries in the zodiac of signs coincided with that in the constellation zodiac in about 500 A.D.

In addition to the influence of the moving equinox itself similar effects are brought about by the same phenomenon of precession on the longitudes of the stars, which increase at the rate of a little over 50" per annum. Pearce pointed out that the Roman Empire and the Papal power were greatly affected by the passage of Regulus through the sign Leo by which Rome is ruled. This star entered Leo in 293 B.C., and the power of Rome became fully established. In 571 A.D. it entered the Sagittarius decanate corresponding with the great increase in Papal power; in 1291 it left that decanate and in the same year the Holy Land was entirely lost. When Regulus left the *terme* of Jupiter in 1507 the efforts of Luther were disturbing the power of the Popes, and when, in 1868, its influence began to be transferred to Virgo on account of its having passed the 29th degree of Leo, the French troops left Rome and the temporal power of the Pope was overthrown.

Another method of prognostication by the use of the fixed stars consists in noting the effect of their passage over the Ascendant and luminaries in the horoscopes for the building or foundation of towns, cities and institutions. Thus it is traditional knowledge that 11 Gemini 54' occupies the Ascendant of the horoscope of the City of London, and it has been pointed out that the plague and fire of London coincided with the passage of

Fixed Stars and Judicial Astrology George C. Noonan, 2009-08 Perhaps the least understood and most misused elements in astrology today are the fixed stars Current practice is to consider the stars as no more than mini manifestations of the planets whose nature they are presumed to hold The locations of the stars projected onto the ecliptic are then considered valid points for aspectual relationships No special significance is attributed to the non zodiacal constellations nor is a star's location within a constellation given any weight whatsoever Finally modern astrology places no distinction on the use of the
