Normalization and Partial Evaluation of Functional Logic Programs Björn Peemöller, 2017-06-16 The functional logic programming paradigm combines the two most important fields of declarative programming namely functional and logic programming in an integrated way to allow the concise notation of high level programs However the variety of concepts and conciseness of programs may also impact their efficiency In this work we employ the powerful optimization technique of partial evaluation to develop a fully automatic program optimizer the so called partial evaluator In particular we formalize the normalization of programs during compilation establish a formal notation of the evaluation process develop a formal partial evaluation scheme and prove its correctness and termination and implement a working partial evaluator which shows impressive results

promise of helping to bridge the gap between application level problem solutions and efficient implementations at the level of today's source programs as written in C or Java. Thus program generation can substantially contribute to reducing production cost and time to market in future software production while improving the quality and stability of the product. This book is about domain specific program generation; it is the outcome of a Dagstuhl seminar on the topic held in March 2003. After an introductory preface by the volume editors, the 18 carefully reviewed, revised full papers presented are organized into topical sections on surveys of domain specific programming technologies, domain specific programming languages, tool support for program generation, domain specific techniques for program optimization.

Self-Adaptive Software Robert Laddaga, Paul Robertson, Howie Shrobe, 2003-08-03. The 18 revised full papers presented in this book together with an introductory survey were carefully reviewed and constitute the documentation of the Second International Workshop on Self adaptive Software IWSAS 2001 held in Balatonfured, Hungary in May 2001. Self adaptive software evaluates its own behavior and changes it when the evaluation indicates that the software does not accomplish what it is intended to do or when better functionality or better performance is possible. The self adaptive approach in software engineering builds on well known dynamic features familiar to Lisp or Java programmes and aims at improving the robustness of software systems by gradually adding new features of self adaption or autonomy.

Logic Programming and Nonmonotonic Reasoning Ulrich Furbach, 1997-07-02. Development and environment problems have reached such alarming proportions that the very survival of humanity is now subject to critical and unprecedented threats. In its latest report the German Advisory Council on Global Change (WBGU) criticizes Germany's global change research community for its lack of international orientation, its bias towards individual disciplines and for its weaknesses in translating scientific results into a form readily accessible to policymakers. The Council identifies alternatives for restructuring the research landscape, focusing primarily on a new Syndrome Approach for global change research. By applying this tool, scientists can systematically describe and analyze the diseases afflicting the Earth System and thus elaborate response options.
