Looking Beneath The Surface The Story Of Archaeology In New Jersey:

Looking Beneath the Surface R. Alan Mounier, 2003 For more than ten thousand years humans have lived in New Jersey From Summit to Cape May from Trenton to the Jersey Shore the state is a treasure trove of archaeological artifacts revealing much about those who occupied the region prior to European settlement As a rule only the most durable of human creations 3 4 items of stone and pottery 3 4 survive the ravages of time To complicate matters the onslaught of our own culture and the indiscriminate looting of sites by greedy collectors have further diminished the cultural materials left behind The task of the archaeologist is to gather and interpret these scraps for the benefit of science and the public But digging up relics is a trivial pursuit if the only outcome is a collection of artifacts however attractive or valuable they may be Understanding what those relics mean in human terms is crucial In Looking beneath the Surface R Alan Mounier looks at the human past of New Jersey With particular focus on the ancient past and native cultures the author tells the story of archaeology in the state as it has unfolded and as it continues to unfold New investigations and discoveries continually change our views and interpretations of the past In jargon free language Mounier provides an in depth introduction offering information to understand general archaeological practices as well as research in New Jersey Subsequent chapters describe artifact types archaeological settlements and burial practices in detail He concludes with vignettes of twenty one archaeological investigations throughout the state to illustrate the variability of sites and the accomplishments of dedicated archaeologists both professional and amateur

Starch grain analysis in the temperate climates of eastern North America using the Delaware River Watershed as a case study for furthering scholarly understanding of the relationship between native people and their biophysical environment in the Woodland Period People regularly use plants for a wide range of utilitarian spiritual pharmacological and dietary purposes throughout the world Scholarly understanding of the nature of these uses in prehistory is particularly limited by the poor preservation of plant resources in the archaeological record In the last two decades researchers in the South Pacific and in Central and South America have developed microscopic starch grain analysis a technique for overcoming the limitations of poorly preserved plant material Messner s analysis is based on extensive reviews of the literature on early historic prehistoric native plant use and the collation of all available archaeobotanical data a review of which also guided the author

in selecting contemporary botanical specimens to identify and in interpreting starch residues recovered from ancient plant processing technologies The evidence presented here sheds light on many local ecological and cultural developments as ancient people shifted their subsistence focus from estuarine to riverine settings These archaeobotanical datasets Messner argues illuminate both the conscious and unintentional translocal movement of ideas and ecologies throughout the Eastern Woodlands **Bulletin of the Archaeological Society of New Jersey** Archaeological Society of New Jersey,2007
