The man, wearing a blue button-down shirt, is leaning in to kiss her on the cheek. The background is a soft, warm glow from a setting or rising sun over the ocean, creating a romantic and intimate atmosphere.

Uncommon Understanding Dorothy V.M. Bishop,2014-02-04 A great deal has been written on how children learn to speak but development of language comprehension has been a relatively neglected topic This book is unique in integrating research in language acquisition psycholinguistics and neuropsychology to give a comprehensive picture of the process we call comprehension right from the reception of an acoustic stimulus at the ear up to the point where we interpret the message the speaker intended to convey by the utterance A major theme of the book is that comprehension is not a unitary skill to understand spoken language one needs the ability to classify incoming speech sounds to relate them to a mental lexicon to interpret the propositions encoded by word order and grammatical inflections and to use information from the environmental and social context to select from a wide range of possible interpretations the one that was intended by the speaker Furthermore although neuropsychological and experimental research on adult comprehension can provide useful concepts and methods for assessing comprehension they should be applied with caution because a sequential bottom up information processing model of comprehension is ill suited to the developmental context The emphasis of the book is on children with specific language impairments but normal development is also given extensive coverage The focus is on research and theory rather than practical matters of assessment and intervention Nevertheless while this book is not intended as a clinical guide to assessment it does aim to provide a theoretical framework that can help clinicians develop a clearer understanding of what comprehension involves and how different types of difficulty may be pinpointed
