Intelligence and International Security Len Scott, R. Gerald Hughes, Martin Alexander, 2013-10-31 The events of 9 11 and subsequent acts of jihadist terrorism together with the failures of intelligence agencies over Iraq's Weapons of Mass Destruction have arguably heralded a new age of intelligence For some this takes the form of a crisis of legitimacy For others the threat of cataclysmic terrorism involving chemical biological radiological or nuclear attack gives added poignancy to the academic contention that intelligence failure is inevitable Many of the challenges facing intelligence appear to be both new and deeply worrying In response intelligence has clearly taken on new forms and new agendas How these various developments are viewed depends upon the historical normative and political frameworks in which they are analysed This book addresses fundamental questions arising in this new age The central aim of the collection is to identify key issues and questions and subject them to interrogation from different methodological perspectives using internationally acclaimed experts in the field A key focus in the collection is on British and North American perspectives Recent trends and debates about the organisation and conduct of intelligence provide key themes for exploration Underpinning several contributions is the recognition that intelligence faces a conflict of ideas as much as practices and threats This book was published as a special issue of *Intelligence and National Security*

Chromatin & Transcriptional Tango on the Immune Dance Floor Ananda L Roy, 2015-04-14 Signaling through the cell surface antigen receptor is a hallmark of various stages of lymphocyte development and adaptive immunity Besides the adaptive immune system the innate immunity is equally important for protection However the mechanistic connection between signaling chromatin changes and downstream transcriptional pathways in both innate and adaptive immune system remains incompletely understood in hematopoiesis A related issue is how the enhancers communicate to the promoters in a stage specific fashion and in the context of chromatin Because the factors that regulate chromatin are generally present and active in most cell types how could cell type and or stage specific chromatin architecture is achieved in response to a particular immune signal The genetic loci that encode lymphocyte cell surface receptors are in an unrearranged or germline

configuration during the early stages of development. Thus, in addition to expressing lineage and/or stage-specific transcription factors during each developmental stage, lymphocytes also need to rearrange their cognate receptor loci in a strictly ordered fashion. Hence, there must be a tightly coordinated communication between the recombination machinery and the transcriptional machinery, including chromatin regulators, at every developmental step. Mature B cells also undergo class-switch recombination and somatic hypermutation. Importantly, along the way, these cells must avoid autoimmune responses, and only those cells capable of recognizing foreign antigens are preserved to reach peripheral organs where they must function. The exquisite regulation that governs chromatin accessibility, recombination, and transcription regulation in response to the environmental signals in the immune system is discussed here.
