Lunar Orbiter Photographic Atlas Of The Near Side Of The Moon:

Lunar Orbiter Photographic Atlas of the Near Side of the Moon Charles Byrne, 2010-03-17 Removes the scanning artefacts and transmission imperfections to produce a most comprehensive and beautifully detailed set of images of the lunar surface To help practical astronomers all the photographs are systematically related to an Earth based view Organized to make it easy for astronomers to use enabling ground based images and views to be compared with the Orbiter photographs

The Far Side of the Moon Charles Byrne, 2007-12-06 The far side of the Moon also called the dark side of the Moon was unknown to humanity until the Luna and Lunar Orbiter pictures were returned to Earth This wonderful book contains beautiful photographs and newly assembled mosaic images of the far side of the Moon cleaned of transmission imaging stripes and processing artifacts by today's computer technology Byrne's superb analysis documents the appearance of the features of the far side with beautiful pictures from Lunar Orbiter Until now the far side Lunar Orbiter photos have only been available with strong reconstruction lines but appear here for the first time as complete photographs unmarred by imaging and processing artifacts

Lunar Orbiter Photographic Atlas of the Moon David E. Bowker, J. Kenrick Hughes, 1971 *The Cambridge Photographic Moon Atlas* Alan Chu, Wolfgang Paech, Mario Weigand, 2012-09-28 Featuring 388 high resolution photographs and concise descriptions of the Moon's topography this atlas is an indispensable guide for amateur astronomers and astrophotographers

Early Exploration of the Moon Tom Lund,2018-12-26 Luna 2 launched by the USSR in 1959 was the first spacecraft from Earth to land on the moon That first voyage was followed by increasingly capable lunar exploration spacecraft from Russia and the United States A total of 36 successful lunar exploration missions were conducted from 1959 to the last Apollo manned exploration in 1972 and the final travels of the Lunokhod lunar rover in 1973 Of all the missions that of Apollo 17 was the pinnacle of manned space exploration Apollo 17 astronauts traveled 21 miles on the lunar surface in a dune buggy type vehicle stopping frequently to explore and gather samples The spacecraft that enabled lunar exploration were ingenious and reflected the best efforts of talented people working with the technology of the day This book showcases the engineering involved in those incredible machines The spacecraft covered and their missions are listed below From the United States Ranger Photography en route to lunar impact Lunar Orbiter Photography of front and back side of moon Surveyor Soft landing photography and soil analysis Apollo Manned exploration Lunar Rover expanded range From the USSR Luna 2 Photography en route to lunar impact Luna 3 Photography of back side of moon on flyby Luna 9 and 13 Soft landing photography and soil analysis Luna 10 11 12 14 Photography from lunar orbit Luna 16 20 24 Soft landing return of soil sample to Earth Lunokhod 1 2 Lunar roving vehicle driven from Earth L1 Planned manned lunar flyby but only flew unmanned L3 Planned manned lunar landing but never flew to moon To tell the story of these spacecraft Tom Lund draws on over 40 years work on aircraft and spacecraft systems He was technical lead for the landing radars for the Surveyor and Apollo spacecraft and his practical experience is augmented by master s degrees in electrical engineering physics and business administration **Guide to U. S. Government Publications** ,1980 **Observing the Moon** Gerald

North,2007-07-05 Written by an experienced and well known lunar observer this is a hands on primer for the aspiring observer of the Moon Whether you are a novice or are already experienced in practical astronomy you will find plenty in this book to help you raise your game to the next level and beyond In this thoroughly updated second edition the author provides extensive practical advice and sophisticated background knowledge of the Moon and of lunar observation It incorporates the latest developments in lunar imaging techniques including digital photography CCD imaging and webcam observing and essential advice on collimating all common types of telescope Learn what scientists have discovered about our Moon and what mysteries remain still to be solved Find out how you can take part in the efforts to solve these mysteries as well as enjoying the Moon s spectacular magnificence for yourself **Selene's Two Faces** ,2018-08-13 If any scientific object has over the course of human history aroused the fascination of both scientists and artists worldwide it is beyond doubt the moon

The moon is also by far the most interesting celestial body when it comes to reflecting on the dualistic nature of photography as applied to the study of the universe Against this background Selene s Two Faces sets out to look at the scientific purpose aesthetic expression and influence of early lunar drawings maps and photographs including spacecraft imaging In its approach Selene s Two Faces is intermedial intercultural and interdisciplinary It brings together not only various media photography maps engravings lithographs globes texts and cultures from Europe America and Asia but also theoretical perspectives See inside the book *Monthly Catalog of United States Government Publications* ,1972 **Photographic Atlas of Planets** Briggs,Fredric Taylor,1986-08-14 This richly illustrated book contains over 200 photographs nearly half of which are in full colour It constitutes the best collection of available photographs of the planets that have been obtained from space over the past two decades Also included wherever available are global maps of the planets and their satellites Each of the following chapters is devoted to one of the planets summarizing what has been learned about that planet and explaining in non technical terms the features that can be seen in the many breathtaking photographs that are presented The chapters are set out with the text first followed by the figures each accompanied by a long caption describing its essential points

Mapping of the Moon Zdenek Kopal,R.W. Carder,2013-04-17 The aim of the present book has been to provide an outline the first of its kin of the history of the human efforts to map the topography of the surface of our satellite from the days of pre telescopic astronomy up to the present These efforts commenced modestly at the time when the unaided eye was still the only tool at the disposal of men interested in the face of our satellite and were continued since for more than three centuries by a small band of devoted friends of the Moon in several countries Many of these were amateur astronomers and almost all were amateur cartographers though some highly skilled in their art The reader interested in the history of lunar mapping between 1600 and 1960 will find its outline in the first chapter of this book and can follow the way in which the leadership in the mapping of the Moon the cradle of which stood in Italy passed successively to France Germany and eventually to the United States All efforts described in this chapter were wholly superseded by subsequent developments since 1960 largely motivated by logistic needs of a grand effort which culminated with repeated manned landings on the Moon between 1969 1972 a feat which will remain for ever one of the glories of our century *Bulletin of the Atomic Scientists* ,1973-12 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world **Lunar and Planetary Cartography in Russia** Vladislav Shevchenko,Zhanna Rodionova,Gregory Michael,2015-10-29 This book is the first to document in depth the history of lunar and planetary cartography in Russia The first map of the far side of the Moon was made with the participation of Lomonosov Moscow University Sternberg Astronomical Institute MSU in 1960 The developed mapping technologies were then used in preparing the Complete Map of the Moon in 1967 as well as other maps and globes Over the years various maps of Mars have emerged from the special

course Mapping of extraterrestrial objects in the MSU Geography Department including the hypsometric map of Mars at a scale of 1:26 000 000 compiled by J. A. Ilyukhina and published in 2004 in an edition of 5 000 copies. A more detailed version of this map has since been produced with a new hypsometric scale. In addition, maps of the northern and southern hemispheres of Mars have been compiled for the hypsometric globe of Mars. Relief maps of Venus were made in 2008, 2010 and 2011, and hypsometric maps of Phobos and Deimos at a scale of 1:60 000 were published in 2011. History of Lunar and Planetary Cartography in Russia provides detailed information on the compilation of this diverse range of maps and will be of interest to all lunar and planetary cartographers.
