## **Lupins As Crop Plants:**

**Lupins as Crop Plants** J. S. Gladstones, C. A. Atkins, John Hamblin, 1998 An authoritative account of *Lupinus* species Topics include breeding genetics and biotechnology nutrition nitrogen fixation transport physiology toxins stress responses pests and diseases agronomy and farming systems composition and food uses and economic value *The Lupin Genome* Karam B. Singh, Lars G. Kamphuis, Matthew N. Nelson, 2020-01-30 This book on lupin genomics primarily focuses on the narrow leafed lupin NLL and details the genomic resources that have been developed and how they are currently being used to help advance both fundamental and applied research on NLL in areas ranging from its domestication to plant microbe interactions and syntenic relationships between NLL and other legume crops It also reports on genomic efforts being pursued with regard to other lupin crops Lupins are important ecological engineers they can colonise and thrive in low nutrient soils due to their ability to fix atmospheric nitrogen in symbiosis with bacteria and efficiently take up phosphorous Recently lupins have attracted considerable interest not only because of their value for sustainable farming as a break crop but also as a potential super food for fighting major health issues in connection with diabetes and obesity Narrow leafed lupin is the main grain legume crop grown primarily in Australia and was therefore selected for the development of a reference lupin genome and associated genomic resources Its genome has recently been sequenced with a focus on the gene rich space which has advanced the development of new breeding tools for the improvement of NLL and related lupin crops

*Plant Genetic Resources of Legumes in the Mediterranean* Nigel Maxted, Sarita Jane Bennett, 2013-03-14 Genetic erosion that is the loss of native plant and genetic diversity has been exponential from the Mediterranean Basin through the Twentieth century This careless eradication of species and genetic diversity as a result of human activities from a hot spot of diversity threatens sustainable agriculture and food security for the temperate regions of the world Since the early 1900s there has been a largely ad hoc movement to halt the loss of plant diversity and enhance its utilisation The Convention on Biological Diversity and Food and Agriculture Organisation of the United Nations International Undertaking on Plant Genetic Resources both highlight the need to improve conservation methodologies and enhance utilisation techniques It has been argued that the most important component of biodiversity is the genetic diversity of crop and forage species used to feed humans and livestock These cultivated and related wild species provides the raw material for further selection and improvement Leguminosae species are of major economic importance peas chickpeas lentils and faba beans as well as numerous forage species and provide a particularly rich source of protein for human and animal foods Their distribution is concentrated in the Mediterranean region and therefore the improvement of their conservation and use in the region is critical This text is designed to help ensure an adequate breadth of legume diversity is conserved and to help maximise the use of that conserved diversity The subjects of conservation and use of legume diversity the Mediterranean ecosystem and taxonomy of legumes are introduced Generic reviews of the taxonomy centre of diversity ecogeographic distribution genetic

diversity distribution conservation status conservation gaps and future research needs are provided along with a discussion of the importance of rhizobia to the maintenance of legume diversity Current ex situ and in situ conservation activities as well current legume uses are reviewed In conclusion future priorities for ex situ and in situ plant genetic conservation and use of Mediterranean legumes are highlighted All contributors look forward rather than simply reviewing past and current activities and therefore it is hoped that the identification of genetic erosion location of taxonomic and genetic diversity and promotion of more efficient utilisation of conserved material will be enhanced

**Toxic Substances in Crop Plants** J. P. Felix D'Mello, C. M. Duffus, John H. Duffus, 1991 This volume reviews current knowledge of toxic substances in crop plants with particular reference to their anti nutritional effects in animals and man and the potential for detoxification The distribution and ecological significance of these compounds is also addressed Continuing disquiet over the use of animal by products in

livestock nutrition has provided renewed impetus for the greater exploitation of conventional and novel crop plants both as food and as industrial raw materials. However, a major factor restricting the utilisation of such crops in animal nutrition is the presence of a diverse array of toxic substances capable of inducing effects ranging from loss of hair and wool to severe neurological disorders and even death. Significant advances have been made to establish the nature of these compounds and to assess their effects in animals and man. As in other branches of biomedical research, these developments have been achieved through the multidisciplinary efforts of chemists, biochemists, toxicologists, nutritionists and molecular geneticists. This volume reviews current knowledge of toxic substances in crop plants with particular reference to their anti-nutritional effects in animals and man and the potential for detoxification. The distribution and ecological significance of these compounds is also addressed.
