Process Scale Purification of Antibodies Uwe Gottschalk, 2017-03-07 Promoting a continued and much needed renaissance in biopharmaceutical manufacturing this book covers the different strategies and assembles top tier technology experts to address the challenges of antibody purification Updates existing topics and adds new ones that include purification of antibodies produced in novel production systems novel separation technologies novel antibody formats and alternative scaffolds and strategies for ton scale manufacturing Presents new and updated discussions of different purification technologies focusing on how they can address the capacity crunch in antibody purification Emphasizes antibodies and innovative chromatography methods for processing Monoclonal Antibodies and Immune Checkpoint Inhibitors in the treatment of Cancer Prakash Radhakrishnan, Cory L. Brooks, Murali M. Yallapu, 2025-01-13 Cancer is a complex disease that can evade the immune system s natural defenses However recent advancements in immunotherapy have revolutionized cancer treatment by using the body s own immune system to fight cancer Monoclonal antibodies mAbs and immune checkpoint inhibitors are two types of immunotherapy that have shown promise in treating various types of cancer Monoclonal antibodies are laboratory produced antibodies that are designed to recognize and target specific proteins on the surface of cancer cells These antibodies can be used alone or in combination with other therapies such as chemotherapy or radiation Monoclonal antibodies work by binding to cancer cells and blocking their ability to grow and divide or by marking them for destruction by the immune system For example trastuzumab Herceptin is a monoclonal antibody that targets HER2 positive breast cancer cells and can be used in combination with chemotherapy to improve survival rates
