the classical applications of Pasteur's principles have failed and it is explained in detail in this book. The book is split into three sections: the first, Concept, brings the basis of reverse vaccinology, vaccine antigen discovery and subunit vaccine; the second, Tools and Methods, describes immunoinformatic proteomics for epitope vaccine design, data bases, network analysis, machine learning and NGS driven antigen screening technology; and the last one, Disease Case Study, discusses real world examples in the development of new vaccines for diverse diseases. It is a valuable resource for bioinformaticians, researchers, students and members of the biomedical and medical fields who want to learn more about a new and agile process for the development of new vaccines. Explains the fundamentals of reverse vaccinology and how it can save time in the development of new vaccines. Focuses on the efforts to develop a vaccine candidate against various pathogens using computational approaches. Presents databases and web servers for conducting reverse vaccinology. Describes the screening process of potential vaccine candidate through machine learning.
