Machines And Intelligence A Critique Of Arguments Against The Possibility Of Artificial Intelligence:

Machines and Intelligence Stuart Goldkind, 1987-04-21 Over the years numerous attempts have been made to show that human intelligence is related to some quality feature or ability that machines cannot possibly have In this unique study Dr Goldkind reconstructs and analyzes the principal arguments of this kind that have not received adequate treatment in the past and responds to each of them in detail Among the questions explored are whether machines can engage in purposive behavior what the relationship is between causal and purposive explanations of behavior whether machines are capable of human error and whether they can perform activities and functions such as natural language understanding and dealing with contexts Dr Goldkind concludes that none of the arguments succeeds in proving that machines must lack the specific abilities or qualities that are posited as uniquely human

Computational Intelligence - Volume I Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly

growing research field including a wide variety of problem solving techniques inspired by nature. Traditionally, computational intelligence consists of three major research areas: Neural Networks, Fuzzy Systems, and Evolutionary Computation. Neural networks are mathematical models inspired by brains. Neural networks have massively parallel network structures with many neurons and weighted connections. Whereas each neuron has a simple input/output relation, a neural network with many neurons can realize a highly non-linear, complicated mapping. Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non-linear mapping required in a particular application task. Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language. For example, it is very difficult to mathematically define the meaning of cold in everyday conversations such as "It is cold today" and "Can I have cold water." The meaning of cold may be different in a different situation. Even in the same situation, a different person may have a different meaning. Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language. As a result, fuzzy systems have been successfully applied to real-world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF-THEN rules. Evolutionary computation includes various population-based search algorithms inspired by evolution in nature. Those algorithms usually have the following three mechanisms: fitness evaluation to measure the quality of each solution, selection to choose good solutions from the current population, and variation operators to generate offspring from parents. Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions. For example, simulation-based fitness evaluation is often used in evolutionary design. Subjective fitness evaluation by a human user is also often used in evolutionary art and music. These volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel, and Policy analysts, managers, and decision makers. *The Era of Artificial Intelligence, Machine Learning, and Data Science in the Pharmaceutical Industry* Stephanie K.

Ashenden, 2021-04-23. *The Era of Artificial Intelligence, Machine Learning, and Data Science in the Pharmaceutical Industry* examines the drug discovery process, assessing how new technologies have improved effectiveness. Artificial intelligence and machine learning are considered the future for a wide range of disciplines and industries, including the pharmaceutical industry. In an environment where producing a single approved drug costs millions and takes many years of rigorous testing prior to its approval, reducing costs and time is of high interest. This book follows the journey that a drug company takes when producing a therapeutic from the very beginning to ultimately benefitting a patient's life. This comprehensive resource will be useful to those working in the pharmaceutical industry but will also be of interest to anyone doing research in chemical biology, computational chemistry, medicinal chemistry, and bioinformatics. Demonstrates how the prediction of toxic effects is performed, how to reduce costs in testing compounds, and its use in animal research. Written by the industrial teams who are conducting the work, showcasing how the technology has improved and where it should be further improved. Targets

materials for a better understanding of techniques from different disciplines thus creating a complete guide

Apocalyptic AI: Visions of Heaven in Robotics, Artificial Intelligence, and Virtual Reality Robert M. Geraci, 2010-02-05 Apocalyptic AI the hope that we might one day upload our minds into machines or cyberspace and live forever is a surprisingly wide spread and influential idea affecting everything from the world view of online gamers to government research funding and philosophical thought In Apocalyptic AI Robert Geraci offers the first serious account of this cyber theology and the people who promote it Drawing on interviews with roboticists and AI researchers and with devotees of the online game Second Life among others Geraci illuminates the ideas of such advocates of Apocalyptic AI as Hans Moravec and Ray Kurzweil He reveals that the rhetoric of Apocalyptic AI is strikingly similar to that of the apocalyptic traditions of Judaism and Christianity In both systems the believer is trapped in a dualistic universe and expects a resolution in which he or she will be translated to a transcendent new world and live forever in a glorified new body Equally important Geraci shows how this worldview shapes our culture Apocalyptic AI has become a powerful force in modern culture In this superb volume he shines a light on this belief system revealing what it is and how it is changing society

Artificial Intelligence/ Human Intelligence: An Indissoluble Nexus Richard J Wallace, 2021-03-02 This book presents a novel view of intelligence and of the relationship between machine intelligence and human beings From this perspective machine intelligence is viewed as an artificial aid to human intelligence and the two are seen to form a seamless web Having established this new perspective on intelligence the book highlights some basic deficiencies of unaided human intelligence through case studies to show how human beings are capable of destroying existing intelligence networks as well as how they fail to recognize that such intelligence networks are needed In many such cases along with the other aspects of the problem there is also a failure of discourse bad arguments and the like dominate the discourse and crucial aspects of the situation are overlooked or glossed over The book then lays out a proposal on how to deal with this kind of problem one that relies heavily on techniques developed in AI This is done in the form of a new kind of grand challenge for AI involving software monitors that are applied to discourse on major issues All this is in keeping with the perspective on intelligence and AI presented in this book
