Ballard,2012-12-06 As I reflect on the evolution of this book I am struck by the differences between my early conceptions and the final product When I was first approached by Springer Verlag regarding a monograph on my interests in the area of fetal lung development I imagined that it would be relatively easy to summarize my contributions plus the work of other investigators as needed for proper perspective This rather naive idea was abandoned as I prepared my initial outlines for the monograph I quickly realized that contributions from my laboratory are not sufficient for telling the story of hormones and lung maturation The result of this decision is a longer and more heavily referenced book than I originally envisioned Although I have attempted to discuss in considerable detail most aspects of hormones and the fetal lung I know with certainty that I have not included all relevant references in each area In most of these instances this reflects my impatience or lack of diligence and I offer my apologies to those investigators whose work has been so omitted In some situations published work has not been cited in a deliberate decision to limit the breadth of discussion or rarely due to my judgment of major shortcomings in experimental design or execution *Lung Surfactants* Robert H. Advances in Perinatal Medicine Aubrey Milunsky, 2012-12-06 The state of health care is reflected by perinatal and neonatal morbidity and mortality as well as by the frequencies of long term neurological and developmental disorders Many factors some without immediately recognizable significance to childbearing and many still unknown undoubtedly contribute beneficially or adversely to the outcome of pregnancy Knowledge concerning the impact of such factors on the fetus and surviving infant is critical Confounding analyses of pregnancy outcome especially these past 2 or 3 decades are the effects of newly undertaken invasive or inactive therapeutic approaches coupled with the advent of high technology Many innovations have been introduced without serious efforts to evaluate their impact prospectively and objectively The consequences of therapeutic misadventures characterized the past it seems they have been replaced to a degree by some of the complications of applied technology Examples abound after overuse of oxygen was recognized to cause retrolental fibroplasia its restriction led to an increase in both neonatal death rates and neurologic damage in surviving infants Administration of vitamin K to prevent neonatal hemorrhagic disease particularly when given in what we now know as excessive dosage occasionally resulted in kernicterus Prophylactic sulfonamide use had a similar end result More recent is the observation of bronchopulmonary dysplasia as a complication of respirator therapy for hyaline membrane disease The decade of the eighties opened with the all time highest rate of cesarean section in the United States
