researchers and developers interested in other applications of neural methods in the broader field of human language processing   *Machine Translation: From Real Users to Research* Robert E. Frederking,Kathryn B. Taylor,2004-09-21 The previous conference in this series AMTA 2002 took up the theme From Research to Real Users and sought to explore why recent research on data driven machine translation didn t seem to be moving to the marketplace As it turned out the rst commercial products of the data driven research movement were just over the horizon andintheinterveningtwoyearstheyhavebeguntoappearinthemarketplace Atthesame time rule basedmachinetranslationsystemsareintroducingdata driventechniquesinto the mix in their products Machine translation as a software application has a 50 year history There are an increasing number of exciting deployments of MT many of which will be exhibited and discussed at the conference But the scale of commercial use has never approached the estimates of the latent demand In light of this we reversed the question from AMTA 2002 to look at the next step in the path to commercial success for MT We took user needs as our theme and explored how or whether market requirements are feeding into research programs The transition of research discoveries to practical use involves te nicalquestionsthatarenotassexyasthosethathavedriventheresearchcommunityand research funding Important product issues such as system customizability computing resource requirements and usability and tness for particular tasks need to engage the creativeenergiesofallpartsofourcommunity especiallyresearch aswemovemachine translation from a niche application to a more pervasive language conversion process Thesetopicswereaddressedattheconferencethroughthepaperscontainedinthesep ceedings and even more speci cally through several invited presentations and panels   Machine translation for everyone: Empowering users in the age of artificial intelligence Dorothy Kenny ,2022-07-06 Language learning and translation have always been complementary pillars of multilingualism in the European Union Both have been affected by the increasing availability of machine translation MT language learners now make use of free online MT to help them both understand and produce texts in a second language but there are fears that uninformed use of the technology could undermine effective language learning At the same time MT is promoted as a technology that will change the face of professional translation but the technical opacity of contemporary approaches and the legal and ethical issues they raise can make the participation of human translators in contemporary MT workflows particularly complicated Against this background this book attempts to promote teaching and learning about MT among a broad range of readers including language learners language teachers trainee translators translation teachers and professional translators It presents a rationale for learning about MT and provides both a basic introduction to contemporary machine learning based MT and a more advanced discussion of neural MT It explores the ethical issues that increased use of MT raises and provides advice on its application in language learning It also shows how users can make the most of MT through pre editing post editing and customization of the technology *Repairing Texts* Hans P. Krings,2001 This study challenges the idea that given the effectiveness of machine translation

major costs could be reduced by using monolingual staff to post edit translations It presents studies of machine translation systems and current research into translation process **Introduction to Google Translate** Gilad James, PhD, Google Translate is a multilingual translation service provided by Google It allows users to translate words phrases and entire documents between multiple languages The service was launched in April 2006 and has since been constantly updated to provide more accurate translations Initially offering translations in only two languages Google Translate now supports over 100 languages The translation process works by analyzing the text or document input by the user breaking it up into smaller segments and then using statistical algorithms to match these segments with translations from its database Google Translate has been a helpful tool for people to communicate across different languages whether it be for business or personal use However it must be noted that automated translations often carry a high risk of inaccuracies due to the complexities inherent in language and the nuances of different cultures and contexts It is always recommended to use translations as a starting point and then have a native speaker review and refine the language to ensure accuracy The Human Factor in Machine Translation Sin-wai Chan,2018-05-08 Machine translation has become increasingly popular especially with the introduction of neural machine translation in major online translation systems However despite the rapid advances in machine translation the role of a human translator remains crucial As illustrated by the chapters in this book man machine interaction is essential in machine translation localisation terminology management and crowdsourcing translation In fact the importance of a human translator before during and after machine processing cannot be overemphasised as human intervention is the best way to ensure the translation quality of machine translation This volume explores the role of a human translator in machine translation from various perspectives affording a comprehensive look at this topical research area This book is essential reading for anyone involved in translation studies machine translation or interested in translation technology **Joint Training for Neural Machine Translation** Yong Cheng,2019-08-26 This book presents four approaches to jointly training bidirectional neural machine translation NMT models First in order to improve the accuracy of the attention mechanism it proposes an agreement based joint training approach to help the two complementary models agree on word alignment matrices for the same training data Second it presents a semi supervised approach that uses an autoencoder to reconstruct monolingual corpora so as to incorporate these corpora into neural machine translation It then introduces a joint training algorithm for pivot based neural machine translation which can be used to mitigate the data scarcity problem Lastly it describes an end to end bidirectional NMT model to connect the source to target and target to source translation models allowing the interaction of parameters between these two directional models **Towards Responsible Machine Translation** Helena Moniz,Carla Parra Escartín,2023-03-01 This book is a contribution to the research community towards thinking and reflecting on what Responsible Machine Translation really means It was conceived as an open dialogue across disciplines from philosophy to law with the ultimate goal of providing a wide spectrum of topics to reflect on It covers aspects
