Longterm Prospects For The World Economy:

Long-term Prospects for the World Economy, 1992 **U.S. Long-term Economic Growth Prospects** United States. Congress. Joint Economic Committee, 1978 *The Future of Global Governance* Mihály Simai, 1994 What are the major political economic technological environmental and social changes confronting the world today and what risks do they pose Given what we know about these changes and risks what adjustments will have to be undertaken to make the world as peaceful and stable as possible Drawing on over 30 years research the eminent European scholar Mihaly Simai combines a global systems approach with a hard headed appreciation of political realities as he seeks answers to these two overarching questions This volume is at once richly informative and profoundly challenging Unflinching in its diagnosis of the past failures and present inadequacies of global governance pragmatic in its prescriptions for more effective multilateral cooperation Simai s work dissects the dimensions and dangers of a world in transition *Global Economic Prospects 2003*, 2003 The 13th edition of this annual publication focuses on the global and national dimensions of the investment climate for developing countries that is the policy and institutional environment that fosters entrepreneurship and productive investment Issues discussed include the effects of current developments in the world economy ways that the international community can help foster economic growth and reduce poverty levels the need for sound national policies particularly to encourage competition in order for developing countries to reap the benefits of globalisation and the potential for a new World Trade Organization agreement on investment and competition *The Future of the World Economy* Wilhelm Krelle, 2013-03-09 Economic growth and structural change the future of the world economy is analysed in this book Conditional forecasts are given for the economic development of the most important world market countries till the year 2000 The driving forces of economic growth are identified and forecasted in connection with collaborating scholars in most of these countries and with international organizations This information is used in solving a coherent world model The model consists of linked growth models for each country or groups of countries The solutions show that the inequality in international income distribution will further increase and that the CMEA and OECD countries will approximately keep their relative positions with some changes within these groups Structural change is also analysed Additionally separate forecasts prepared by each collaborating country group are given and may be compared with the forecasts by the world model The book closes with chapters on special features of the future economic development on the international debt problem on long waves on structural change in the world trade on the emergence of service economics and on the comparison of GDP and NMP national accounting

Space 2030 Exploring the Future of Space Applications OECD, 2004-05-03 This report adopts a scenario based approach to explore the future evolution of major components of the space sector military space civil space commercial space over the next thirty years **Towards a Better Global Economy** Franklin Allen, Jere R. Behrman, Nancy Birdsall, Shahrokh Fardoust, Dani Rodrik, Andrew Steer, Arvind Subramanian, 2014-09-04 Substantial progress in the fight against extreme

poverty was made in the last two decades But the slowdown in global economic growth and significant increases in income inequality in many developed and developing countries raise serious concerns about the continuation of this trend into the 21st century The time has come to seriously think about how improvements in official global governance coupled with and reinforced by rising activism of global citizens can lead to welfare enhancing and more equitable results for global citizens through better national and international policies This book examines the factors that are most likely to facilitate the process of beneficial economic growth in low middle and high income countries It examines past present and future economic growth demographic changes the hyperglobalization of trade the effect of finance on growth climate change and resource depletion and the sense of global citizenship and the need for global governance in order to draw longer term implications identify policy options for improving the lives of average citizens around the world and make the case for the need to confront new challenges with truly global policy responses The book documents how demographic changes convergence and competition are likely to bring about massive shifts in the sectoral and geographical composition of global output and employment as the center of gravity of the global economy moves toward Asia and emerging economies elsewhere It shows that the legacies of the 2008-09 crisis high unemployment levels massive excess capacities and high debt levels are likely to reduce the standard of living of millions of people in many countries over a long period of adjustment and that fluctuations in international trade financial markets and commodity prices as well as the tendency of institutions at both the national and international level to favor the interests of the better off and more powerful pose substantial risks for citizens of all countries The chapters and their policy implications are intended to stimulate public interest and facilitate the exchange of ideas and policy dialogue

Global Economic Prospects 2007 World Bank, 2006 Over the next 25 years developing countries will move to center stage in the global economy Global Economic Prospects 2007 analyzes the opportunities and stresses this will create While rich and poor countries alike stand to benefit the integration process will make more acute stresses already apparent today in income inequality in labor markets and in the environment Over the next 25 years rapid technological progress burgeoning trade in goods and services and integration of financial markets create the opportunity for faster long term growth However some regions notably Africa are at risk of being left behind The coming globalization will also see intensified stresses on the global commons Addressing global warming preserving marine fisheries and containing infectious diseases will require effective multilateral collaboration to ensure that economic growth and poverty reduction proceed without causing irreparable harm to future generations

Economy—Energy—Environment Simulation K. Uno, 2005-12-08 In the policy arena as well as in the academic world a new challenge is having to deal with the global community We are increasingly aware that the world is linked through economy energy environment interactions We are increasingly aware at the same time that the emergence of the global community does not imply an integrated harmonious world rather it is a community where countries of different interests and values face each other directly Global governance has to be achieved through actions of national governments under different motives and constraints We need to have an analytical tool that is capable of producing a global picture yet with detailed country resolution If the world is a better place now compared to 100 years ago in terms of per capita income this is due to the industrialization that continued throughout the 20th century We entered the 21st century knowing that the human aspiration that translates into ever increasing production may not be tenable in the long run Sustainability of the global community is at stake In contrast to incremental decision making through the market mechanism that should lead to some optimal state under some assumptions such as perfect knowledge smooth movement of resources no externalities and so forth we need to have an analytical tool to provide us with details of the future state of the world *World Development Report 1984* World Bank, 1984 Long term needs and sustained effort are underlying themes in this year's report As with most of its predecessors it is divided into two parts The first looks at economic performance past and prospective The second part is this year devoted to population the causes and consequences of rapid population growth its link to development why it has slowed down in some developing countries The two parts mirror each other economic policy and performance in the next decade will matter for population growth in the developing countries for several decades beyond Population policy and change in the rest of this century will set the terms for the whole of development strategy in the next In both cases policy changes will not yield immediate benefits but delay will reduce the room for maneuver that policy makers will have in years to come The Future of US Global Power S. Brown, 2012-12-14 Dispelling the myth of decline Stuart Brown argues that the US continues to enjoy the economic political cultural and military underpinnings befitting a pre eminent global power He provides an analytical tour through the major domestic and foreign policy issues that will impact the United States future position and role in the global system **Global Economic Prospects 2005**, 2004 This annual publication analyses the global and national dimensions of the investment climate for developing countries in terms of the policy and institutional environment This edition examines the growth of regional trade agreements which have risen eight fold in two decades with currently as much as 40 percent of global trade taking place among countries that have some form of reciprocal regional trade agreement Issues discussed include regional trading trends effects of regional agreements on trade creation trade facilitation and services investment intellectual property rights and labour mobility whether the proliferation of agreements poses risks for multilateral trading system and if so options for managing them The report finds that agreements leading to

open regionalism that is deeper integration of trade as a result of low external tariffs increased services competition and efforts to reduce cross border and customs delays costs are effective as part of a larger trade strategy to promote growth Although regional agreements can prove beneficial to member countries they can have adverse effects on excluded countries and the lowering of border barriers around the world is crucial to minimising these effects The completion of the Doha Development Agenda by all WTO countries will reduce the risk of trade diversion associated with regional agreements and will decrease trade losses of countries excluded from agreements
