Laleh Jalali,Ramesh Jain,2021-05-21 This book introduces the concept of Event Mining for building explanatory models from
analyses of correlated data Such a model may be used as the basis for predictions and corrective actions The idea is to create
via an iterative process a model that explains causal relationships in the form of structural and temporal patterns in the data
The first phase is the data driven process of hypothesis formation requiring the analysis of large amounts of data to find
strong candidate hypotheses The second phase is hypothesis testing wherein a domain expert s knowledge and judgment is
used to test and modify the candidate hypotheses The book is intended as a primer on Event Mining for data enthusiasts and
information professionals interested in employing these event based data analysis techniques in diverse applications The
reader is introduced to frameworks for temporal knowledge representation and reasoning as well as temporal data mining
and pattern discovery Also discussed are the design principles of event mining systems The approach is reified by the
presentation of an event mining system called EventMiner a computational framework for building explanatory models The
book contains case studies of using EventMiner in asthma risk management and an architecture for the objective self The
text can be used by researchers interested in harnessing the value of heterogeneous big data for designing explanatory event
