Language Multilinguals' Speech Competence and Speech Performance Peijian Paul Sun, 2020-08-19 This book offers a

comprehensive and systematic review of multilingual L2 learners spoken Chinese focusing on the dual dimensions of speech competence and speech performance. Specifically by adopting a mixed methods approach it explores the cognitive affective and socio cultural differences between intermediate and advanced multilingual learners L2 Chinese speech competence and speech performance. Drawing on a theoretical framework underpinned by the affective filter hypothesis L2 willingness to communicate model L2 motivational self system and L2 speech production models this book not only contributes to our theoretical understanding of the roles of various factors in L2 Chinese speech competence and speech performance but also offers practical insights into the implications for both teachers and learners in terms of how to minimize the gap between these two dimensions among L2 Chinese learners. It concludes with a discussion on the limitations of L2 Chinese speech and on future directions for the field.

Encyclopedia of the Sciences of Learning Norbert M. Seel, 2011-10-05

Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation, cognition, metacognition etc. and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naive theories of learning, psychological learning theories can be grouped into some basic categories such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology, education, information science, biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence. As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The *Encyclopedia of the Sciences of Learning* provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction, pedagogy, cognitive sciences and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers and technical staff active in all fields of learning. More specifically the *Encyclopedia* provides fast access to the most relevant theoretical terms, provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies, supplies clear and precise explanations of the theoretical terms, cross references to related entries and up to date references to important research and

publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences
