Mathematical Modelling and Applications Gloria Ann Stillman, Werner Blum, Gabriele Kaiser, 2017-11-05 This volume documents on going research and theorising in the sub field of mathematics education devoted to the teaching and learning of mathematical modelling and applications Mathematical modelling provides a way of conceiving and resolving problems in the life world of people whether these range from the everyday individual numeracy level to sophisticated new problems for society at large Mathematical modelling and real world applications are considered as having potential for multi disciplinary work that involves knowledge from a variety of communities of practice such as those in different workplaces e g those of educators designers construction engineers museum curators and in

different fields of academic endeavour e.g. history, archaeology, mathematics, economics. From an educational perspective, researching the development of competency in real world modelling involves research situated in crossing the boundaries between being a student engaged in modelling or mathematical application to real world tasks in the classroom, being a teacher of mathematical modelling in or outside the classroom or bridging both, and being a modeller of the world outside the classroom. This is the focus of many of the authors of the chapters in this book. All authors of this volume are members of the International Community of Teachers of Mathematical Modelling (ICTMA), the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace.

Heat Transfer Mechanism and Temperature Field Model of MQL Micro-Grinding Biomedical Materials Yang, Min, Li, Changhe, 2025-04-17. In the field of biomedical engineering, the micro grinding of materials is critical for precision and biocompatibility. Understanding the heat transfer mechanisms and temperature field models during minimum quantity lubrication (MQL) micro grinding is essential for optimizing performance and ensuring the integrity of sensitive biomedical materials. Heat generation can directly impact the quality and precision of the grinding process, affecting tool wear, surface finish, and material properties. A comprehensive temperature field model is necessary for effective process control, practical solutions in biomedical manufacturing, and improved innovations in material science. *Heat Transfer Mechanism and Temperature Field Model of MQL Micro Grinding Biomedical Materials* provides theoretical guidance and technical support for predicting biomedical materials grinding temperatures and improving surface integrity. It conducts an experimental evaluation on the mechanical behavior of ductile removal and micro grinding temperature field in nanofluid minimum quantity lubrication (MQL). This book covers topics such as mechanical engineering, ductile removal, and nanotechnology and is a useful resource for mechanical and material engineers, scientists, business owners, medical professionals, academicians, and researchers.

The Ecology of the Architectural Model Nick Dunn, 2007. For architectural educators, models are not only as near to a realised building as one can get, but for their students, they are the means by which architecture itself, its processes, concepts, strategies, and tactics are learned. This book describes the environment of architectural models in an educational context.

Mathematical Modelling and Numerical Analysis of Size-Dependent Structural Members in Temperature Fields Jan Awrejcewicz, Anton V. Krysko, Maxim V. Zhigalov, Vadim A. Krysko, 2020-10-08. This book is devoted to researchers and teachers as well as graduate students, undergraduates, and bachelors in engineering, mechanics, nano mechanics, nanomaterials, nanostructures, and applied mathematics. It presents a collection of the latest developments in the field of nonlinear chaotic dynamics of mass distributed parameter nanomechanical structures, providing a rigorous and comprehensive study of modeling nonlinear phenomena. It is written in a unique pedagogical style, particularly suitable for independent study and self education. In addition, the book achieves a good balance between Western and Eastern extensive studies of the mathematical problems of nonlinear vibrations of structural
