

# Reflection

**Reflection** is a type of transformation that flips a shape in a mirror line (also called a line of reflection) so that each point is the same distance from the mirror line as its reflected point.

E.g. Triangle P has been reflected in the line  $x = 4$  to give Triangle Q.

*Mathematical Vistas* Peter Hilton, Derek Holton, Jean Pedersen, 2013-06-29 Focusing Your Attention We have called this book *Mathematical Vistas* because we have already published a companion book *Mathematical Reflections* in the same series 1 indeed the two books are dedicated to the same principal purpose to stimulate the interest of bright people in mathematics It is not our intention in writing this book to make the earlier book a prerequisite but it is of course natural that this book should contain several references to its predecessor This is especially but not uniquely true of Chapters 3 4 and 6 which may be regarded as advanced versions of the corresponding chapters in *Mathematical Reflections* Like its predecessor the present work consists of nine chapters each devoted to a lively mathematical topic and each capable in principle of being read independently of the other chapters Thus this is not a text which as is the intention of most standard treatments of mathematical topics builds systematically on certain common themes as one proceeds 1 *Mathematical Reflections* In a Room with Many Mirrors Springer Undergraduate Texts in Mathematics 1996 Second Printing 1998 We will refer to this simply as MR 2 There was an exception in MR Chapter 9 was concerned with our thoughts on the doing and teaching of mathematics at the undergraduate level

**An Introduction to Mathematical Cryptography** Jeffrey Hoffstein, Jill Pipher, J.H. Silverman, 2008-12-15 The creation of public key cryptography by Diffie and Hellman in 1976 and the subsequent invention of the RSA public key cryptosystem by Rivest Shamir and Adleman in 1978 are watershed events in the long history of secret communications It is hard to overestimate the importance of public key cryptosystems and their associated digital signature schemes in the modern world of computers and the Internet This book provides an introduction to the theory of public key cryptography and to the mathematical ideas underlying that theory Public key cryptography draws on many areas of mathematics including number theory abstract algebra probability and information theory Each of these topics is introduced and developed in sufficient detail so that this book provides a self contained course for the beginning student The only prerequisite is a first course in linear algebra On the other hand students with stronger mathematical backgrounds can move directly to cryptographic applications and still have time for advanced topics such as elliptic curve pairings and lattice reduction algorithms

Among the many facets of modern cryptography this book chooses to concentrate primarily on public key cryptosystems and digital signature schemes This allows for an in depth development of the necessary mathematics required for both the construction of these schemes and an analysis of their security The reader who masters the material in this book will not only be well prepared for further study in cryptography but will have acquired a real understanding of the underlying mathematical principles on which modern cryptography is based
