

# MATHEMATICAL REFORMULATION OF THE KOLMOGOROV-RICHARDSON ENERGY CASCADE IN TERMS OF VORTEX STRETCHING

TSUYOSHI YONEDA, SUSUMU GOTO, AND TOMONORI TSURUHASHI

**ABSTRACT.** In this paper, with the aid of direct numerical simulations (DNS) of forced turbulence in a periodic domain, we mathematically reformulate the Kolmogorov-Richardson energy cascade in terms of vortex stretching. By using the description, we prove that if the Navier-Stokes flow satisfies a new blowup criterion in terms of the enstrophy production rate, then the flow does not blow up. Our DNS results seem to support this blowup criterion. Next, we mathematically construct the hierarchy of tubular vortices, which is statistically self-similar in the inertial range. Under the assumptions of the scale-locally of the vortex stretching/compressing (i.e. energy cascade) process and the statistical independence between vortices that are not directly stretched or compressed, we can derive the  $-5/3$  power law of the energy spectrum of statistically stationary turbulence without directly using the Kolmogorov hypotheses.

## 1. INTRODUCTION

Since the seminal study by Orszag and Patterson (1972) [21], the numerical integration (i.e. the direct numerical simulations, DNS) of the Navier-Stokes equation without any turbulence model has been playing important roles in turbulence researches; see Ref. [12] for a review of DNS of turbulence. One of the most important features unveiled by DNS of turbulence is that turbulence is not random but composed of coherent motions. In particular, recent DNS [7, 9, 18, 19] of turbulence at sufficiently high Reynolds numbers have revealed that there exists a hierarchy of coherent vortices in developed turbulence.

In the present study, we investigate the energy cascade picture [23, 5] in turbulence of an incompressible fluid with uniform density and kinematic viscosity  $\nu$  under periodic boundary conditions in three orthogonal directions; and, on the basis of the picture, we develop arguments on the global-in-time smooth solution of the Navier-Stokes equation. Since we need external force to drive flow in a periodic cube, we impose body force  $f$  which injects the kinetic energy at a large scale  $\mathcal{L}$ . Here, we define the Reynolds number by

$$(1.1) \quad Re = U\mathcal{L}/\nu$$

with  $U$  being the characteristic velocity directly driven by  $f$ . When  $Re$  is sufficiently high (more concretely, higher than  $O(10^4)$  [4]), turbulence is composed of vortices with various length scales. We reemphasize that these vortices are coherent

**Nonsmooth, Piecewise Smooth, Semismooth and Smoothing Methods** Masao Fukushima,Liqun Qi,2013-04-17 The concept of reformulation has long been playing an important role in mathematical programming A classical example is the penalization technique in constrained optimization that transforms the constraints into the objective function via a penalty function thereby reformulating a constrained problem as an equivalent or approximately equivalent unconstrained problem More recent trends consist of the reformulation of various mathematical programming problems including variational inequalities and complementarity problems into equivalent systems of possibly nonsmooth piecewise smooth or semismooth nonlinear equations or equivalent unconstrained optimization problems that are usually differentiable but in general not twice differentiable Because of the recent advent of various tools in nonsmooth analysis the reformulation approach has become increasingly profound and diversified In view of growing interests in this active field we planned to organize a cluster of sessions entitled Reformulation Nonsmooth Piecewise Smooth Semismooth and Smoothing Methods in the 16th International Symposium on Mathematical Programming ismp97 held at Lausanne EPFL Switzerland on August 24 29 1997 Responding to our invitation thirty eight people agreed to give a talk within the cluster which enabled us to organize thirteen sessions in total We think that it was one of the largest and most exciting clusters in the symposium Thanks to the earnest support by the speakers and the chairpersons the sessions attracted much attention of the participants and were filled with great enthusiasm of the audience      **Gravitation and Spacetime** Hans C. Ohanian,Remo Ruffini,2013-04-08 The third

edition of this classic textbook is a quantitative introduction for advanced undergraduates and graduate students It gently guides students from Newton's gravitational theory to special relativity and then to the relativistic theory of gravitation General relativity is approached from several perspectives as a theory constructed by analogy with Maxwell's electrodynamics as a relativistic generalization of Newton's theory and as a theory of curved spacetime The authors provide a concise overview of the important concepts and formulas coupled with the experimental results underpinning the latest

research in the field Numerous exercises in Newtonian gravitational theory and Maxwell's equations help students master essential concepts for advanced work in general relativity while detailed spacetime diagrams encourage them to think in terms of four dimensional geometry Featuring comprehensive reviews of recent experimental and observational data the text concludes with chapters on cosmology and the physics of the Big Bang and inflation *EPSA Philosophical Issues in the Sciences* Mauricio Suárez, Mauro Dorato, Miklós Rédei, 2010-07-17 This volume collects papers presented at the Founding Conference of the European Philosophy of Science Association meeting held November 2007 It provides an excellent overview of the state of the art in philosophy of science in different European countries

**General Relativity Conflict and Rivalries** Galina Weinstein, 2016-01-14 This book focuses on Albert Einstein and his interactions with and responses to various scientists both famous and lesser known It takes as its starting point that the discussions between Einstein and other scientists all represented a contribution to the edifice of general relativity and relativistic cosmology These scientists with whom Einstein implicitly or explicitly interacted form a complicated web of collaboration which this study explores focusing on their implicit and explicit responses to Einstein's work This analysis uncovers latent undercurrents indiscernible to other approaches to tracking the intellectual pathway of Einstein to his general theory of relativity The interconnections and interactions presented here reveal the central figures who influenced Einstein during this intellectual period Despite current approaches to history presupposing that the efforts of scientists such as Max Abraham and Gunnar Nordström which differed from Einstein's own views be relegated to the background this book shows that they all had an impact on the development of Einstein's theories stressing the limits of approaches focusing solely on Einstein As such *General Relativity Conflict and Rivalries* proves that the general theory of relativity was not developed as a single coherent construction by an isolated brooding individual but rather that it came to fruition through Einstein's conflicts and interactions with other scientists and was consolidated by his creative processes during these exchanges
