

The mathematical theory of relativity

The background features a dark blue space filled with small white stars. On the left, a portion of a blue sphere is visible. A bright yellow beam of light originates from the left and extends horizontally across the middle of the image. Below this beam, a blue grid of lines represents the curvature of spacetime, with the grid lines bending downwards in the center. A yellow diagonal beam also enters from the bottom left corner.

Excerpt from *The Mathematical Theory of Relativity* The reader is expected to have a general acquaintance with the less technical discussion of the theory given in *Space Time and Gravitation* although there is not often occasion to make direct reference to it But it is eminently desirable to have a general grasp of the revolution of thought associated with the theory of Relativity before approaching it along the narrow lines of strict mathematical deduction In the former work we explained how the older conceptions of physics had become untenable and traced the gradual ascent to the ideas which must supplant them Here our task is to formulate mathematically this new conception of the world and to follow out the consequences to the fullest extent The present widespread interest in the theory arose from the verification of certain minute deviations from Newtonian laws To those who are still hesitating and reluctant to leave the old faith these deviations will remain the chief centre of interest but for those who have caught the spirit of the new ideas the observational predictions form only a minor part of the subject It is claimed for the theory that it leads to an understanding of the world of physics clearer and more penetrating than that previously attained and it has been my aim to develop the theory in a form which throws most light on the origin and significance of the great laws of physics About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **The Mathematical Theory of Relativity** Sir Arthur Stanley Eddington,1923 **MATHEMATICAL THEORY OF RELATIVITY** ARTHUR STANLEY. EDDINGTON,2018 *The Mathematical Theory of Relativity* Arthur S Eddington,2016-12-19 Eddington s *The Mathematical Theory of Relativity* is arguably the first comprehensive treatise on the mathematical and physical foundations of general relativity As Prof Ashtekar explained it in his excellent and informative Foreword it is comprehensive on three fronts Eddington systematically introduces the tools of differential geometry explains the then known physical consequences of the theory with admirable clarity and discusses in detail the conceptual underpinning of general relativity The new publication of

Eddington's book is justified not only by its historical value but also by the fact that it still provides an original and detailed introduction to the deep physical ideas of general relativity and its mathematical formalism whose treatment throughout the monograph is clear sharp and at the same time pedagogical from the Foreword Eddington's enlightening exposition of general relativity carries interesting lessons for contemporary researchers in gravitational science at all stages of their career It is therefore fortunate that the Minkowski Institute Press is making this historic monograph easily available once again from the Foreword NOTE This book is not a re publication of the scanned pages of the original publication the text has been typeset in LaTeX **The Mathematical Theory of Relativity** Théophile de Donder,1927 **The Mathematical**

The Physical and Mathematical Foundations of the Theory of Relativity Antonio Romano, Mario Mango Furnari, 2019-09-25 This unique textbook offers a mathematically rigorous presentation of the theory of relativity emphasizing the need for a critical analysis of the foundations of general relativity in order to best study the theory and its implications The transitions from classical mechanics to special relativity and then to general relativity are explored in detail as well helping readers to gain a more profound and nuanced understanding of the theory as a whole After reviewing the fundamentals of differential geometry and classical mechanics the text introduces special relativity first using the physical approach proposed by Einstein and then via Minkowski's mathematical model The authors then address the relativistic thermodynamics of continua and electromagnetic fields in matter topics which are normally covered only very briefly in other treatments in the next two chapters The text then turns to a discussion of general relativity by means of the authors' unique critical approach underlining the difficulty of recognizing the physical meaning of some statements such as the physical meaning of coordinates and the derivation of physical quantities from those of space time Chapters in this section cover the model of space time proposed by Schwarzschild black holes the Friedman equations and the different cosmological models they describe and the Fermi Walker derivative Well suited for graduate students in physics and mathematics who have a strong foundation in real analysis classical mechanics and general physics this textbook is appropriate for a variety of graduate level courses that cover topics in relativity Additionally it will interest physicists and other researchers who wish to further study the subtleties of these theories and understand the contemporary scholarly discussions surrounding them
