Windows on Mathematical Meanings Richard Noss, Celia Hoyles, 2012-12-06 This book is the culmination of some ten years theoretical and empirical investigation Throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other **The LOGO**

Syntheses M. Kathleen Heid, Glendon W. Blume, 2008-07-01 According to NCTM's Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field **Learning Mathematics and Logo** Celia Hoyles, Richard Noss, 1992 These original

essays summarize a decade of fruitful research and curriculum development using the LISP derived language Logo They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry In the second section the contributions take up pedagogical styles and strategies They tackle such cognitive and metacognitive questions as What range of learning styles can the Logo setting accommodate How can teachers make sense of pupils preferred strategies And how can teachers help students to reflect on the strategies they are using Returning to the mathematical structures essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics

Selected Regular Lectures from the 12th International Congress on Mathematical Education Sung Je Cho, 2015-07-16 This book comprises the full selected Regular Lectures from the Proceedings of the 12th International Congress on Mathematical Education ICME 12 which was held at COEX in Seoul Korea from July 8th to 15th 2012 ICME 12 brought together 4700 experts from 100 countries working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice These selected Regular Lectures present the work of fifty one prominent mathematics educators from all over the globe The Lectures cover a wide spectrum of topics themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education

Intelligent Learning Environments: The Case of Geometry Jean-Marie Laborde, 2012-12-06 This book is a thoroughly revised result updated to mid 1995 of the NATO Advanced Research Workshop on Intelligent Learning Environments the case of geometry held in Grenoble France November 13 16 1989 The main aim of the workshop was to foster exchanges among researchers who were concerned with the design of intelligent learning environments for geometry The problem of student modelling was chosen as a central theme of the workshop insofar as geometry cannot be reduced to procedural knowledge and because the significance of its complexity makes it of interest for intelligent tutoring system ITS development The workshop centred around the following themes modelling the knowledge domain modelling student knowledge design ing didactic interaction and learner control This book contains revised versions of the papers presented at the workshop All of the chapters that follow have been written by participants at the workshop Each formed the basis for a scheduled presentation and discussion Many are suggestive of research directions that will be carried out in the future There are four main issues running through the papers presented in this book knowledge about geometry is not knowledge about the real world and materialization of geometrical objects implies a reification of geometry

which is amplified in the case of its implementation in a computer since objects can be manipulated directly and relations are the results of actions Laborde Schumann This aspect is well exemplified by research projects focusing on the design of geometric microworlds Guin Laborde

Learning Mathematics Anthony Orton, 2004-12-30 Why do some students achieve more than others Do we have to wait until pupils are ready Can children discover math for themselves Does language interfere with the learning of math This classic text written from the viewpoint of the math teacher provides answers to these and many more questions Each chapter explores a particular issue that illustrates the interaction between theory and practice New chapters have been included on cognition pattern and ICT

Cases on Inquiry through Instructional Technology in Math and Science Lennex, Lesia, Nettleton, Kimberly Fletcher, 2012-01-31 There exists a wealth of information about inquiry and about science technology engineering and mathematics STEM but current research lacks meaningfully written thoughtful applications of both topics Cases on Inquiry through Instructional Technology in Math and Science represents the work of many authors toward meaningful discourse of inquiry used in STEM teaching This book presents insightful information to teachers and teacher education candidates about using inquiry in the real classroom case studies from which research suggests appropriate uses and tangible direction for creating their own inquiry based STEM activities Sections take the reader logically through the meaning of inquiry in STEM teaching how to use technology in modern classrooms STEM projects which successfully integrate inquiry methodology and inquiry problem solving within STEM classrooms with the aim of creating activities and models useful for real world classrooms

Reasoning, Communication and Connections in Mathematics Berinderjeet Kaur, Tin Lam Toh, 2012 This fourth volume in the series of yearbooks by the Association of Mathematics Educators in Singapore entitled Reasoning Communication and Connections in Mathematics is unique in that it focuses on a single theme in mathematics education The objective is to encourage teachers and researchers to advance reasoning communication and connections in mathematics classrooms Several renowned international researchers in the field have published their work in this volume The fifteen chapters of the book illustrate evidence based practices that school teachers and researchers can experiment with in their own classrooms to bring about meaningful learning outcomes Three major themes mathematical tasks classroom discourse and connectivity within and beyond mathematics shape the ideas underpinning reasoning communication and connections in these chapters The book makes a significant contribution towards mathematical processes essential for learners of mathematics It is a good resource for mathematics educators and research students

Cognitive Models and Intelligent Environments for Learning Programming Enrica Lemut, Benedict DuBoulay, Giuliana Dettori, 2013-11-11 At present there is a general consensus on the nature of learning programming but there are different opinions on what forms an effective environment for it It is generally recognized that the development of a mental model is a formidable task for the student and that learning programming is a complex activity that depends heavily on metacognitive skills This book based on a NATO

workshop presents both pure cognitive models and experimental learning environments and discusses what characteristics can make a learning model effective especially in relation to the learning environment natural or computerized The papers cover cognitive models related to different aspects of programming classes of learners and types of environment and are organized in three groups theoretical and empirical studies on understanding programming environments for learning programming and learning programming in school environments Comprehension design construction testing debugging and verification are recognized as interdependent skills which require complicated analysis and may develop independently and indifferent orders in novices This book shows that there is unlikely to be a single path from novice to expert and that the structure of the final product the program may not constrain the process by which it comes into being as much as some would advocate
