Mathematics In Industrial Problems Pt 3 Ima Volumes In Mathematics And Its Applications Ser Vol 31:

Mathematics in Industrial Problems Avner Friedman, 2012-12-06 This is the tenth volume in the series Mathematics in Industrial Problems The motivation for these volumes is to foster interaction between Industry and Mathematics at the grass roots level that is at the level of specific problems These problems come from Industry they arise from models developed by the industrial scientists in ventures directed at the manufacture of new or improved products At the same time these problems have the potential for mathematical challenge and novelty To identify such problems I have visited industries and had discussions with their scientists Some of the scientists have subsequently presented their problems in the IMA Seminar on Industrial Problems The book is based on the seminar presentations and on questions raised in subsequent discussions Each chapter is devoted to one of the talks and is self contained The chapters usually provide references to the mathematical literature and a list of open problems which are of interest to the industrial scientists For some problems a partial solution is indicated briefly The last chapter of the book contains a short description of solutions to some of the problems raised in the previous volume as well as references to papers in which such solutions have been published The speakers in the Seminar on Industrial Problems have given us at the IMA hours of delight and discovery Microwaves, Millimeter Wave and Terahertz

Liquid Crystals Anyong Qing, Yizhe Zhao, Zhiyong Zhang, 2024-03-05 This book is the first ever monograph on nematic liquid crystals for microwaves millimeter waves and terahertz waves It presents the first hand independent studies on nematic liquid crystals for microwaves millimeter waves and terahertz waves This book opens with an introduction to generic liquid crystals and a retrospective review about nematic liquid crystals in microwaves millimeter waves and terahertz waves Attention is then focused on the latest in house progress on microwave millimeter wave and terahertz nematic liquid crystals Synthesis and characterization of novel nematic liquid crystals are first presented followed by indigenous technologies to manufacture functional nematic liquid crystal devices for microwaves millimeter waves and terahertz waves A few self developed representative advanced functional devices are shown to demonstrate the promising perspective of liquid crystals for not only microwaves millimeter waves and terahertz waves but also many other non display applications The presented studies will attract scientists engineers and students from various disciplines such as materials chemical electrical biological and biomedical engineering The book is intended for undergraduates graduates researchers professionals and industrial practitioners who are interested in developing novel liquid crystals and further extending liquid crystals beyond display

Multidimensional Hyperbolic Problems and Computations James Glimm, Andrew J. Majda, 2012-12-06 This IMA Volume in Mathematics and its Applications MULTIDIMENSIONAL HYPERBOLIC PROBLEMS AND COMPUTATIONS is based on the proceedings of a workshop which was an integral part of the 1988-89 IMA program on NONLINEAR WAVES We are grateful to the Scientific Committee James Glimm Daniel Joseph Barbara Keyfitz Andrew Majda Alan Newell Peter Olver David Sattinger and David Schaeffer for planning and implementing an exciting and stimulating year long program We

especially thank the Workshop Organizers Andrew Majda and James Glimm for bringing together many of the major figures in a variety of research fields connected with multidimensional hyperbolic problems. A vner Friedman Willard Miller

PREFACE A primary goal of the IMA workshop on Multidimensional Hyperbolic Problems and Computations from April 3-14, 1989 was to emphasize the interdisciplinary nature of contemporary research in this field involving the combination of ideas from the theory of nonlinear partial differential equations, asymptotic methods, numerical computation and experiments. The twenty-six papers in this volume span a wide cross section of this research including some papers on the kinetic theory of gases and vortex sheets for incompressible flow in addition to many papers on systems of hyperbolic conservation laws. This volume includes several papers on asymptotic methods such as nonlinear geometric optics, a number of articles applying numerical algorithms such as higher order Godunov methods and front tracking to physical problems along with comparison to experimental data and also several interesting papers on the rigorous mathematical theory of shock waves.

Institute for Mathematics and Its Applications, 1993 **Books in Print Supplement**, 1994 **Books in Print**, 1991 *Subject Guide to Books in Print*, 1997 *Peter Lax, Mathematician* Reuben Hersh, 2014-12-29 This book is a biography of one of the most famous and influential living mathematicians Peter Lax. He is virtually unique as a preeminent leader in both pure and applied mathematics fields which are often seen as competing and incompatible. Although he has been an academic for all of his adult life, his biography is not without drama and tragedy. Lax and his family barely escaped to the U.S. from Budapest before the Holocaust descended. He was one of the youngest scientists to work on the Manhattan Project. He played a leading role in coping with the infamous kidnapping of the NYU mathematics department's computer in 1970. The list of topics in which Lax made fundamental and long-lasting contributions is remarkable: scattering theory, solitons, shock waves, and even classical analysis to name a few. His work has been honored many times including the Abel Prize in 2005. The book concludes with an account of his most important mathematical contributions made accessible without heavy prerequisites. Reuben Hersh has written extensively on mathematics. His book with Philip Davis, *The Mathematical Experience* won the National Book Award in science. Hersh is emeritus professor of mathematics at the University of New Mexico.
