Beyond Classical Pedagogy Terry Wood, Barbara Scott Nelson, Janet E. Warfield, 2014-04-04 The emergence of the National Council of Teachers of Mathematics Standards in 1989 sparked a sea change in thinking about the nature and quality of mathematics instruction in U S schools Much is known about transmission forms of mathematics teaching and the influence of this teaching on students learning but there is still little knowledge about the alternative forms of instruction that have evolved from the recent widespread efforts to reform mathematics education Beyond Classical Pedagogy Teaching Elementary School Mathematics reports on the current state of knowledge about these new instructional practices which differ in significant ways from the traditional pedagogy that has permeated mathematics education in the past This book provides a research based view of the nature of facilitative teaching in its relatively mature form along with opposing views and critique of this form of pedagogy The focus is on elementary school mathematics classrooms where the majority of the reform based efforts have occurred and on the micro level of teaching classroom interaction as a source for revealing the complexity involved in teaching teachers learning and the impact of both on children s learning The work in elementary mathematics teaching is situated in the larger context of research on teaching Research and insights from three disciplinary perspectives are presented the psychological perspective centers on facilitative teaching as a process of teachers learning the mathematical perspective focuses on the nature of the mathematical knowledge teachers need in order to engage in this form of teaching the sociological perspective attends to the interactive process of meaning construction as teachers and students create intellectual communities in their classrooms The

multidisciplinary perspectives presented provide the editors with the necessary triangulation to provide confirming evidence and rich detail about the nature of facilitative teaching. Audiences for this book include scholars in mathematics education and teacher education, teacher educators, staff developers and classroom teachers. It is also appropriate as a text for graduate courses in mathematics education, teacher education, elementary mathematics, teaching methods and methods of research in mathematics education.

Partnerships in Educational Development Iffat Farah, Barbara Jaworski, 2006-05-15

This book is about the development of one institution and its developmental work in education in south and central Asia and in east Africa: the Institute for Educational Development (IED) at the Aga Khan University (AKU) in Karachi, Pakistan. The IED came into being in 1993 and launched its first programme in 1994: an M Ed in teacher education. It recruited 20 teachers carefully selected from schools in Pakistan, east Africa, Tajikistan and Bangladesh. There should have been a teacher from India but sadly she was not granted a visa to come. These 20 teachers, graduating from the M Ed course 18 months later, were the first graduates from the IED. They became the first Professional Development Teachers (PDTs) working with schools and running short courses for other teachers at the IED. After three years of PDT work, some of these graduates were selected for PhD studies overseas and are now doctoral graduates and central IED faculty. The wheel has come full circle. In the meantime, the M Ed programme has flourished and developed with eight cohorts of selected teachers. The IED programmes have expanded in a variety of ways and in a variety of directions. Some are academic programmes educating teachers and educational managers in a university environment, albeit with school-focused work. Some are professional programmes located in the field, albeit with theoretical elements perceived as central to the developmental process. The IED has attracted attention both nationally and internationally. In the countries listed above, professional programmes have developed to run alongside the central IED operation. The IED's work has become visible to government agencies who, from tentative initial investment, are now looking towards the IED to work with them in the developmental field. Other countries have seen the results of the IED's work in the original countries and have asked to join the developmental enterprise. The IED now works with three countries in east Africa: namely Kenya, Tanzania and Uganda; in Afghanistan, Syria and several central Asian countries including Tajikistan and Kyrgyzstan. There are possibilities of initiating work in other countries in the region. Perceived in such terms, the IED's growth and influence reads like an educational developmental success story. And of course it is a success. But this is not to say that there are not many issues and problems to face in its day-to-day and decade-to-decade development. In 2003, the IED celebrated 10 years of operation. This was a time to celebrate and also to take stock of its achievements and issues. It has many impact programmes in place, seeking to provide sound research evidence to document processes in learning and growth and issues that have to be addressed. One problem of rapid growth is that it is easy for the institute and its faculty to become overextended, so that in-depth review of programmes and outcomes is never achieved. Despite considerable overextension, the IED is striving to avoid this danger. This book is a product of the 10 years of development. It had been

hoped to complete it for the 10 year celebrations but as with other aspects of the IED it kept on growing This volume tries to provide an account of development from a number of perspectives such as historical chronological issues based and honestly critical
