established the concept of competence as an organizing framework for the field of achievement motivation. With an increased focus on connecting theory to application, the second edition incorporates diverse perspectives on why and how individuals are motivated to work toward competence in school, work, sports, and other settings. Leading authorities present cutting edge findings on the psychological, sociocultural, and biological processes that shape competence motivation across development, analyzing the role of intelligence, self-regulated learning, emotions, creativity, gender, and racial stereotypes, self-perceptions, achievement values, parenting practices, teacher behaviors, workplace environments, and many other factors. As a special bonus, purchasers of the second edition can download a supplemental e-book featuring several notable, highly cited chapters from the first edition. New to This Edition: Most chapters are new, reflecting over a decade of theoretical and methodological developments. Each chapter now has an applied as well as conceptual focus, showcasing advances in intervention research. Additional topics: self-regulation in early childhood, self-determination theory, challenge and threat appraisals, performance incentives, achievement emotions, job burnout, gene-environment interactions, class-based models of competence, and the impact of social group membership. Supplemental e-book featuring selected chapters from the prior edition.

The Nature of Mathematical Thinking Robert J. Sternberg, Talia Ben-Zeev, 2012-10-12. Why do some children seem to learn mathematics easily and others slave away at it, learning it only with great effort and apparent pain? Why are some people good at algebra but terrible at geometry? How can people who successfully run a business as adults have been failures at math in school? How come some professional mathematicians suffer terribly when trying to balance a checkbook? And why do school children in the United States perform so dismally in international comparisons? These are the kinds of real questions the editors set out to answer or at least address in editing this book on mathematical thinking. Their goal was to seek a diversity of contributors representing multiple viewpoints whose expertise might converge on the answers to these and other pressing and interesting questions regarding this subject. The chapter authors were asked to focus on their own approach to mathematical thinking but also to address a common core of issues such as the nature of mathematical thinking, how it is similar to and different from other kinds of thinking, what makes some people or some groups better than others in this subject area, and how mathematical thinking can be assessed and taught. Their work is directed to a diverse audience: psychologists interested in the nature of mathematical thinking and abilities; computer scientists who want to simulate mathematical thinking; educators involved in teaching and testing mathematical thinking; philosophers who need to understand the qualitative aspects of logical thinking; anthropologists and others interested in how and why mathematical thinking seems to differ in quality across cultures; and laypeople and others who have to think mathematically and want to understand how they are going to accomplish that feat.

EdPsych Modules Cheryl Cisero Durwin, Marla Reese-Weber, 2019-12-04. *EdPsych Modules* uses an innovative modular approach and case studies based on real life classroom situations to address the challenge of effectively connecting theory and research to practice. Succinct stand alone

modules are organized into themed units and offer instructors the flexibility to tailor the book's contents to the needs of their course. The units begin with a set of case studies written for early childhood, elementary, middle, and secondary classrooms, providing students with direct insight into the dynamics influencing the future students they plan to teach. All 25 modules highlight diversity, emphasizing how psychological factors adapt and change based on external influences such as sex, gender, race, language, disability status, and socioeconomic background. The Fourth Edition includes over three hundred new references across all 25 modules and expanded coverage of diversity in new diversity-related research. This title is accompanied by a complete teaching and learning package. Handbook of Competence and Motivation, Second Edition Andrew J. Elliot, Carol S. Dweck, David S. Yeager, 2018-02-21.
