**Mathematical Chess** Dr George Ho,2017-06-28 Mathematical chess is a two player educational and entertaining game played on ten digit pieces 0 1 2 3 4 5 6 7 8 9 and six operator pieces addition subtraction multiplication division power and root The chessboard is a grid made up of nine vertical and nine horizontal lines It is flexible and suitable for all students from middle and high schools to universities The excessive use of electronic calculators and games has caused a negative impact on the alertness of the minds and the numerical abilities of students at all levels Dr Ryan said In numeracy the young teenage student in 2003 was approximately a quarter of a grade level behind his or her counterpart in 1964 This was reported in the article Grade Worse Than in 1960s SMH 11 February 2008 Students love challenges and competitions Dr Robert C Ferguson writes A learning environment organised around games has a positive effect on students attitudes towards learning Teachers Guide Research and Benefits of Chess 11 October 2006 The above statements drive the implementation of this mathematical chess game Like European chess and Chinese chess mathematical chess teaches strategy planning problem solving memory improvement decision making concentration perseverance observation analysis and organisation skill Mathematical chess itself also promotes numerical abilities mental alertness and speedy calculation The numeracy performance of students in many countries has not improved since 1960 not because of the incompetence of the teachers but because an educational game interesting and challenging enough to attract students attention did not exist Mathematical chess can help resolve this drawback The authors dream is to see mathematical chess become a popular game in all middle and high schools and to see the love and passion of mathematics flowering in the minds of young people around the world

**Learning Chess To Improve Math** Amanda Ho, Frank Ho,2020-01-24 How did I start to write this Learning Chess to Improve Math workbook I started to teach my son chess when he was five years old At that time a lot of information I had read indicated that there was a strong relationship between mathematics and chess My son was interested in chess so

what would happen if he carried the same interest in chess on to a subject which would require him to use his chess knowledge What could chess offer in mathematics education These kinds of questions sparked my interest in studying the relationship between chess and math What I had found was there had been many chess or math puzzles published but I was not able to find a collection of mathematical chess problems that was specifically created for youngsters In 1995 I was involved in teaching math and chess at the same time and I started to seriously look into the possibility of creating some math and chess hybrid problems This is how my son and I started to create the first generation of Math and Chess integrated workbook titled Mathematical Chess Puzzles for Juniors ISBN 0 9683967 0 4 and it was archived at National Library of Canada It is designed and written for the purpose of learning all kinds of problem solving skills through over 100 mind provoking and sometimes mind boggling mathematical chess puzzles The uniqueness of this book is that only the basic chess knowledge and the elementary math ability are needed to solve most of these puzzles I have been working on refining the contents ever since and after almost 20 years of working the first math and chess workbook I have incorporated many math concepts and today s version is the fourth generation This workbook of integrating chess and math puzzles could be used as a supplemental or enriched material to supplement math curriculum World s first and copyrighted Mathematical Chess Puzzles for Juniors workbook The first edition of workbook Mathematical Chess Puzzles for Juniors created in 1995 was a world s first I did a through literature and library catalogues searches and publicized my workbook on the internet including rec games chess misc resulted in nothing similar to my workbook had ever been published There was no integrated chess and math workbook ever published for the elementary students at the time when I published my workbook in 1995 In addition I have updated the workbook since I published the first one 20 years ago with many new and innovative ideas still my workbook is the only one on the market It would be devastating for me if some copycat just copied my ideas and formats of worksheets and started to commercialize it To protect my intellectual property I am the world s first on the following ideas and concepts and I am the original creator of unique formats of worksheets

### **Ho Math, Chess, and Puzzles for Grade 1 and Under**

Frank Ho, Amanda Ho, 2017-12-28 Many books have suggested chess related math projects for teachers to use but this workbook is the world firstly created for students under grade 1 to combine chess directly into math computation worksheets This workbook teaches basic computations in addition and subtraction mostly for one digit operations It also includes mathematical puzzles and mathematical chess puzzles Some puzzles combine arithmetic chess and Sudoku all in one This special puzzle is called Frankho ChessDoku A world s first invention maze called Frankho ChessMaze is also included in this workbook To understand a bit more about Ho Math Chess teaching philosophy and its worksheet watch the following video <https://www.youtube.com/watch?v=Td3SKp7cukA> Please email Frank Ho at [fho1928@gmail.com](mailto:fho1928@gmail.com) for any problems suggestions or concerns I started to get involved in chess teaching at the time when my son was about 6 years old He showed interest in a set of chess placed on the table in the living room He was excited about finding out that by making a right move he was

rewarded with taking his opponent's piece. Later we studied chess together and he became a Canadian junior chess champion and a FIDE chess master. My interest shifted from playing chess itself to studying the relation between chess and mathematics. Eventually I created this Ho Math Chess and Puzzles for Grade 1 and Under workbook. There are many pure math puzzles or chess puzzles only workbooks on the market. How this Ho Math Chess and Puzzles for Grade 1 and Under workbook sets itself apart from others is that it contains one of a kind mathematical chess puzzles in which math concepts and chess knowledge are integrated using my invention of SCL Symbolic Chess Language to link math and chess and this discovery is the world's first. SCL is based on the chess set which I created using a geometry concept of line segments and lines. This workbook is a revolutionary breakthrough in teaching math using game-based teaching method. Many problems require children to look for problems using spatial relations and patterns also find their answers by computing in multi-step. As a result, this math and chess integrated workbook takes the boredom and repetitions away from computing practice. Ho Math Chess teaching method can improve children's math scores and problem-solving ability, develop children's logic and critical thinking skills. It is a natural health food for improving brainpower. Most of the teaching organizations use a very classic teaching method that is to teach basic numeracy or counting skills; they do not know how to systematically integrate a chess game into math worksheets. Ho Math Chess is the only one and the world's first to have integrated chess and puzzles into math calculation worksheets to make math learning fun. This workbook uses chess pieces, chess points, and chessboard etc. to instill mathematical concepts related to the pattern, logic, geometry, transformation, number theory, and many many other math concepts. This workbook is created with the ideas of learning math in multi-concept, multi-sensory, multi-direction, and hands-on approach. It is an innovative product of supplementing elementary mathematics. The purposes of this workbook are to develop and train the skills of the following areas:

### **Corridors (The Geometry, Physics and Mathematics of Chess)**

**Vol 1** Herman Tolbert Sr., 2011-09-14 Chess enthusiast Herman Tolbert Sr. takes three of the four elements of chess: space, time, force, and parallels a one-to-one mapping that relates Geometry, Physics, and Mathematics in a unique theme he terms Corridors. Compiling over the board tournament experience along with online worldwide games as well as friendly pick-up games, Corridors is a repeated process which eventually zones in on the King or significant material which has game-winning advantages. This work hopes to demonstrate Mr. Tolbert's classroom teaching skills and his keen analytical ability to breakdown the complex into simpler forms. Corridors is a combination of whole or partial rank's, file's, and square's which are controlled to a lasting degree which yield advantageous results. Many chess concepts are conveyed by novice to Grandmasters, but this unique work though not for the very beginner can be applied by the many eager to improve players no matter the skill level. It is with this spirit that Mr. Tolbert wishes to share what he feels is a path of enlightenment whose fruits of labor is a growth in understanding chess which can only lead to more victories.

**Mathematical Chess Puzzles for Juniors** Frank Ho, Ho, F. M. Andrew, Vancouver Math and Chess Puzzle Centre, 1998

*Math Wars* Carmen Latterell, 2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math The debate centers around the standards written by the National Council of Teachers of Mathematics NCTM which call for a radically different approach to mathematics education Because the issues are so heated between the NCTM oriented curricula and traditional curricula the curricula that NCTM oriented replaced the term Math Wars was coined to describe them Parents are concerned about their children's math learning Teachers are concerned about math teaching When parents see what children are bringing home under the new curriculum it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school But the problem goes beyond grades K 12 Post secondary mathematics courses are the fear of many students The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college Besides lack of knowledge about mathematics education many parents have an additional problem in that they feel they lack knowledge in mathematics itself This is very intimidating thus it is difficult for parents to do anything about the confusing state of mathematics education This book provides some answers

*Introduction to Ho Math Chess and Its Founder Frank Ho* Frank Ho, Amanda Ho, 2015-09-13 Many people were curious about how I created so many unique workbooks People were also wondered how Ho Math Chess is different from other similar learning centres Many readers do not have an idea on how these puzzles were placed in each of our workbooks When we first created these puzzles we did not have a blueprint to follow because they did not exist Many parents do not know how to teach their children with our workbooks because they themselves had never seen this kind of arithmetic worksheets before So I decided to write a book to address the above two problems one is to describe

how I created worksheets in general and the other is to show how and why Ho Math Chess sets itself apart from others I would like to thank my students who had given us feedbacks during my writing many workbooks As a matter fact I wrote a few worksheets for some of my students and tried on them and if they did not work out effectively then I revised Without these students input some of my workbooks would not have been materialized I have produced unedited videos to talk about my worksheets and explained about their formatting Watch my videos using the following links They are very educational and one of a kind Frank Ho presents math chess and puzzles integrated Intelligent Arithmetic Worksheet <https://www.youtube.com/watch?v=Td3SKp7cukA> t 262s Published on Jun 14 2017 Frank walks the viewer through his unique and world s first math chess and puzzles integrated worksheet No questions are shown on the sheet only mini chessboard puzzle table and his invented flat chess Geometry Chess Symbols which are being used as a set of the command language Students follow identified square where and use chess moves to reach a puzzle table information retrieval like cloud storage to fetch its corresponding data The fetched data is linked with the previously identified mini chessboard to complete the answer The whole process takes the boredom and mundane routine computation procedure out of the problem and replaces it with puzzle like fun Ho Math Chess Intelligent Arithmetic Worksheets This is the future style of computation problems that is students not only will be trained on computation to find answers they also are asked to use their thinking skills to figure out the problems by going through visualization orientation corresponding analyzing synthesizing and executing abstract commanding symbols The enforcement for the students to write the problems only imprints more impression on the number facts <https://www.youtube.com/watch?v=D3wAMqo4qUE> What is Intelligent Arithmetic Worksheet The intelligent Arithmetic worksheet allows students to work on computations but figures out the answers like they are working on word problems I have dreamed about how can I can create a type of computation worksheets which are disruptively different from the traditionally straightforward type of computational worksheets Not only they have to be fun intriguing and entertaining they also must be effective in learning results This example is one of many examples which I created and collected them in my workbook called Ultimate Math Contest Preparation Problem Solving Strategies and Math IQ Puzzles Grade 1 and 2 from pages 28 to 74 The Intelligent Arithmetic Worksheets take the exploratory approach which trains a student to use more of his or her brain and yet the problem is not difficult so an average student can solve them with fun I also created a video which introduces my math chess and puzzles combined idea as follows <https://www.youtube.com/watch?v=Td3SKp7cukA>
