Buck,2020-11-05 This edited volume offers a crosscutting view of STEM and is comprised of work by scholars in science technology engineering and mathematics education It offers a view of STEM from the disciplines that comprise it while adhering to the idea that STEM itself is an interdisciplinary treatment of all the associated disciplines in a meaningful way This book raises and answers questions regarding the meaning of STEM education and research This volume is divided into three sections the first one describes the nature of the component disciplines of STEM The next section presents work from leaders representing all STEM disciplines and deals with aspects such as K 12 and post secondary education The last section draws conclusions regarding the natures of the disciplines challenges and advantages of STEM education in terms of theoretical and practical implications The two final chapters compile arguments from the research chapters describing themes in research results and making recommendations for best STEM education practice and examining areas for future research in STEM education      **Computer Books and Serials in Print** ,1984      **Teaching Mathematics in Secondary and Middle School** James S. Cangelosi,2003 For courses in secondary or middle school math This text focuses on all the

complex aspects of teaching mathematics in today's classroom and the most current NCTM standards. It demonstrates how to creatively incorporate the standards into teaching along with inquiry-based instructional strategies. Using one expansive case study that follows a mathematics teacher through his first year in the profession, the text illustrates how to lead pupils toward meaningful mathematics and strategies for developing mathematics skills. Interactive in its approach, the text includes an abundance of illustrative examples, mini case studies, cooperative learning activities, field-based activities, and transitional activities.

**Visible Learning** John Hattie, 2008-11-19 This unique and ground-breaking book is the result of 15 years of research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers' feedback and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence-based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers: an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence-based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark dashboard for comparing many innovations in teaching and schools.
