C.H. Venner,A A Lubrecht,2000-07-21 Efficient numerical solution of realistic and therefore complex equation systems  
occupies many researchers in many disciplines For various reasons but mainly in order to approximate reality a very large  
number of unknowns are needed Using classical techniques the solution of such a system of equations would take too long  
and so sometimes MultiLevel techniques are used to accelerate convergence Over the last one and a half decades the authors  
have studied the problem of Elastohydrodynamic Lubrication governed by a complex integro differential equation Their work  
has resulted in a very efficient and stable solver In this book they describe the different intermediate problems analyzed and  
solved and how those ingredients finally come together in the EHL solver A number of these intermediate problems such as  
Hydrodynamic Lubrication and Dry Contact are useful in their own right In the Appendix the full codes of the Poisson  
problem the Hydrodynamic Lubrication problem the dry contact solver and the EHL solver are given These codes are all  
written in C language based on the ANSI C version **Applied Mechanics Reviews** ,1966 Auto Math Handbook John
