

Manufacturing with Mathematics

From shoes to computers, mathematics helps manufacturers make things faster, cheaper, and better.

Materials design and production

Mathematics is used to develop strong but lightweight metals, ceramics and composite materials by modeling materials design and production. Models can identify new material possibilities, explore processing routes, and solve complex production problems such as creating lightweight yet durable fabrics.

Mathematical simulations bring costs down and get new products to the market faster.

Mathematical modeling of parts and assemblies

A century ago, individual components of manufactured goods were designed by drawing shapes and figures on paper. Now, most parts are designed using precise mathematical models that dramatically improve upon the former labor-intensive and error-prone process.

3D printing relies on detailed mathematical models of part size, shape, and material composition.

Chemical finishing and milling

Mathematical techniques lower the cost and improve the quality of machined parts. Chemical finishing, which changes the surface of an object to enhance its appearance or durability, depends on solving sophisticated mathematics problems to find the correct chemical concentration and timing. This reduces waste and lessens the environmental impact.

Computer Numerical Control (CNC) programming

CNC-equipped manufacturing tools permit devices—like 3D printers, drills, cutters, mills, and robots—to fabricate parts and assemblies through the mathematical specification of the paths of motion for such tools.

Specifying these paths in high-dimensional mathematical models permits the complex motions needed for parts to be coded in repeatable, accurate ways that lead to lower costs and manufactured goods of higher quality.

Robotic arms—used in sorting, assembly, and packing—have mathematical controls that automatically adjust to ambient temperature, humidity, and even the current condition of the machines.

Models for making composite parts in an autoclave—a giant pressure cooker—depend on simultaneously solving the heat equation and a dynamical system that describes movement of particles over time.

Assembly and statistical process control

Complex statistical models aid in product assembly and help to ensure the quality of the finished result.

The assembly process—including placing subparts, securing them together, drilling fastener holes, and installing fasteners—can be complicated by issues such as measurement error, temperature, material deformations, and distortions. Modeling can help capture these phenomena and enable errors to be analyzed and corrected sooner rather than later.

Distribution networks

A field called operations research helps to manage logistics and efficiently distribute finished goods to wholesalers and retailers. High-dimensional linear and non-linear models of cost structure and consumer demand optimize the distribution network to make sure goods get to the people who depend on them.

Explorations of new technological opportunities. **The Making of Mathematics** Carlo Cellucci, 2022-03-07. This book offers an alternative to current philosophy of mathematics: heuristic philosophy of mathematics. In accordance with the heuristic approach the philosophy of mathematics must concern itself with the making

of mathematics and in particular with mathematical discovery In the past century mainstream philosophy of mathematics has claimed that the philosophy of mathematics cannot concern itself with the making of mathematics but only with finished mathematics namely mathematics as presented in published works On this basis mainstream philosophy of mathematics has maintained that mathematics is theorem proving by the axiomatic method This view has turned out to be untenable because of G del s incompleteness theorems which have shown that the view that mathematics is theorem proving by the axiomatic method does not account for a large number of basic features of mathematics By using the heuristic approach this book argues that mathematics is not theorem proving by the axiomatic method but is rather problem solving by the analytic method The author argues that this view can account for the main items of the mathematical process those being mathematical objects demonstrations definitions diagrams notations explanations applicability beauty and the role of mathematical knowledge

The Contribution of Mathematics to School STEM Education Judy Anderson, Katie Makar, 2024-06-10 This book presents contemporary STEM education research conducted by mathematics education researchers and their collaborators which highlights the important and pivotal role of mathematics in school STEM education It showcases evidence of the types of integrated curriculum approaches to STEM education which highlight mathematics as a key component and where mathematical concepts can be learnt through integrated tasks These examples challenge the idea that mathematics is just an application or servant to the other STEM subjects and highlight the contribution that mathematics can make to the understanding and practices of the other STEM subjects This book fills a void in the current research literature on the role of mathematics in STEM education provides evidence of the possibilities for designing integrated STEM curriculum and highlights current understandings of the role of mathematics in school STEM education For researchers it identifies and elaborates gaps to encourage further exploration in this field
