Mathematische Methoden in der historischen Linguistik Mikhail Viktorovich Arapov, Maisa Markovna Khert's, 1983

Quantification in Linguistics and Text Analysis Emmerich Kelih, Ján Mačutek, Michaela Koščová, 2025-05-06 This volume contains the most important theoretical and methodological works of Gabriel Altmann 1931 2019 He is the founder of a specific school of quantitative linguistics which focuses on the statistical analysis and interrelationship of linguistic features and characteristics His approach concentrates on the construction of a general theory of linguistics The theory is based on the relevance of linguistic laws Zipf's Menzerath's and Piotrowski's and concepts of language as a self regulating system In contrast to approaches where quantitative methods are used as standard methodological tools Altmann favours a holistic and epistemological view of problems of quantification of linguistic and textual phenomena *Sequence Comparison in*

Historical Linguistics Mattis List, 2014-07-21 The comparison of sound sequences words morphemes constitutes the core of many techniques and methods in historical linguistics With the help of these techniques corresponding sounds can be determined historically related words can be identified and the history of languages can be uncovered So far the application of traditional techniques for sequence comparison is very tedious and time consuming since scholars have to apply them manually without computational support In this study algorithms from bioinformatics are used to develop computational methods for sequence comparison in historical linguistics The new methods automatize several steps of the traditional comparative method and can thus help to ease the painstaking work of language comparison *Language in Its Cultural Embedding* Harald Haarmann, 2011-06-01 No detailed description available for Language in Its Cultural Embedding

Quantitative Linguistik / Quantitative Linguistics Reinhard Köhler, Gabriel Altmann, Rajmund G. Piotrowski, 2008-07-14 Over the past two decades statistical and other quantitative concepts models and methods have been increasingly gaining importance and interest in all areas of linguistics and text analysis as well as in a number of neighboring disciplines and areas of application The term quantitative linguistics comprises all scientific and technical approaches which use such terms and methods in the analysis of or work with language's texts and other related subjects The 71 articles in this handbook written by internationally recognized experts offer a broad up to date overview of the scientific theoretical principles the history the diversity of the subject areas studied the methods and models used the results obtained thus far and their applications The articles are divided up into thirteen chapters the first chapter includes contributions on the basic principles and the history of the field nine additional chapters are dedicated to individual descriptions of the levels of linguistic research from phonology to pragmatics as well as typological diachronic and geolinguistic questions The next two chapters include a description of important models hypotheses and principles selected areas of application and references to neighboring disciplines The last portion of the handbook is an informative contribution with information about publication forums bibliographies major projects Internet links etc This handbook is useful not only for researchers teachers and students of all

branches of linguistics and the philologies but also for scientists in neighboring fields whose theoretical and empirical research touches on linguistic questions for instance psychology and sociology or for those who want to make use of the proven methods or results from quantitative linguistics in their own research

The Nature of Culture Walter A. Koch, 1989 *Mathematisierung der Einzelwissenschaften* BOOSS, KRICKEBERG, 2013-09-03 Stimmt es daß die Wendung zum Methodischen die die

wissenschaftliche Theorie im historischen Verlauf ihrer Entwicklung und Differenzierung genommen hat mit Notwendigkeit zu Mathematisierungstendenzen führt. Wie sind Tragfähigkeit, Reichweite und Aussichten mathematischer Methoden in den Einzelwissenschaften zu beurteilen? In welchem Verhältnis zueinander stehen mathematische und einzelwissenschaftliche Konzepte? Antwort auf diese Fragen sucht eine in der Gründungsphase der neuen Universität Bielefeld gebildete Mathematisierungskommission im Hinblick auf eine raschere Übertragung neuer Methoden und Modellvorstellungen von einer Einzelwissenschaft in eine andere, das Aufspüren neuer Entwicklungslinien der Mathematisierung und einen theoretischen Vorlauf zur weiteren maschinellen Datenverarbeitung. Bei den folgenden Beiträgen handelt es sich um die zum Teil nur leicht korrigierten Mitschriften von Vorträgen vor dieser Kommission und um ergänzende Stellungnahmen aus am Ort nicht vertretenen Disziplinen, die einen ersten Ansatz zu einer umfassenden Bestandsaufnahme und kritischen Diskussion des Gebrauchs mathematischer Methoden in den verschiedenen Wissenschaften liefern wollen. Im Mittelpunkt der sich in monatlicher Folge aneinanderschließenden Referate der Vertreter der einzelnen Wissenschaften standen Probleme der Kooperation zwischen ihrer Disziplin und der Mathematik, wobei sie häufig von einer populärwissenschaftlichen Darstellung ihres Fachs nach Art des alten *Studium Generale* ausgingen. Vor dem Hintergrund ihrer Einschätzung, welche stürmischen Entwicklungen hat es in den letzten zwanzig bis fünfzig Jahren gegeben und wo herrscht eher Stagnation, zogen die Referenten ein Resümee bisheriger Berührungen ihrer Wissenschaft mit der Mathematik und erörterten Aussichten des weiteren Einsatzes mathematischer Methoden.
